With contributions from 26 leading KM practitioners, academicians, and information professionals, editors Srikantaiah and Koenig bridge the gap between two distinct perspectives, equipping information professionals with the tools to make a broader and more effective contribution in developing KM systems and creating a knowledge management culture within their organizations. The Graphical User Interface (GUI), as the most prevailing type of User Interface (UI) in today's interactive applications, restricts the interaction with a computer to the visual modality and is therefore not suited for some users (e.g., with limited literacy or typing skills), in some circumstances (e.g., while moving around, with their hands or eyes busy) or when the environment is constrained (e.g., the keyboard and the mouse are not available). In order to go beyond the GUI constraints, the Multimodal (MM) UIs appear as paradigm that provide users with great expressive power, naturalness and flexibility. In this thesis we argue that

developing MM UIs combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of: a set of models, a method manipulating these models and the tools implementing the method. Therefore, we define a design space-based method that is supported by model-to-model colored transformations in order to obtain MM UIs of information systems. The design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort. The feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage. In addition, an empirical study is conducted with end-users in order to measure the relative usability level provided by different design decisions. Websites and apps are places where critical parts of our lives happen. We shop, bank, learn, gossip, and select our leaders there. But many of these places weren't intended to support these activities. Instead, they're

designed to capture your attention and sell it to the highest bidder. Living in Information draws upon architecture as a way to design information environments that serve our humanity. The market for high yield (below investment-grade) corporate bonds developed in the middle 1980s. We show that, since this time, the high yield spread has had significant explanatory power for the business cycle. We interpret this finding as possibly symptomatic of financial factors at work in the business cycle, along the lines suggested by the financial accelerator. We also show that over this period the high yield spread outperforms other leading financial indicators, including the term spread, the paper-bill spread and the Federal Funds rate. We conjecture that changes in the conduct of monetary policy over time may account for the reduced informativeness of these alternative indicators, all of which are tied closely to monetary policy. Intelligent Spaces looks at how the information age will affect architecture and interior design. The author looks at

over fifty projects by leading architects, including designs for television studios, publishing houses, media libraries and cyber cafés. The World Food Summit, held in Rome in November 1996, recognised the urgent need for better information. As a result the FIVIMS (Food Insecurity and Vulnerability Information and Mapping System) initiative was launched, as a co-operative venture, to assist countries and the international community to identify the "who, where and why" of food insecurity. Even before the Summit, many countries had established approaches for this purpose based on multidisciplinary networks, at national and local levels. One of these approaches, developed first in French-speaking Africa, is the FSIEWS method (Food Security Information and Early Warning System) proposed in this handbook as one of the tools available to those engaged in the fight against hunger. This contribution to the FIVIMS initiative is addressed to the national technical officers at central and decentralised level, as well as to their

collaborators from the technical assistance community. This report contains the 2014 "Phase 2: Implementation of the Standards in Practice" Global Forum review of Panama. This publication reviews the quality of El Salvador's legal and regulatory framework for the exchange of information for tax purposes. This publication reviews the quality of Burkina Faso's legal and regulatory framework for the exchange of information for tax purposes. This report examines Iceland's legal and regulatory framework for the exchange of tax information, as well as the practical implementation of that framework. This publication reviews the quality of Pakistan's legal and regulatory framework for the exchange of information for tax purposes. In the same way that infrastructures such as transportation, electricity, sewage, and water supply are widely assumed to be integrators of urban spaces, information infrastructures are assumed to be integrators of information spaces. With the advent of Web 2.0 and new types of information infrastructures

such as online social networks and smart mobile platforms, a more in-depth understanding of the various rights to access, use, develop, and modify information infrastructure resources is necessary. Perspectives and Implications for the Development of Information Infrastructures aims at addressing this need by offering a fresh new perspective on information infrastructure development. It achieves this by drawing on and adapting theory that was initially developed to study natural resource commons arrangements such as inshore fisheries, forests, irrigation systems, and pastures, while placing great emphasis on the complex problems and social dilemmas that often arise in the negotiations. From the bestselling author of the acclaimed Chaos and Genius comes a thoughtful and provocative exploration of the big ideas of the modern era: Information, communication, and information theory. Acclaimed science writer James Gleick presents an eye-opening vision of how our relationship to information has transformed the very

nature of human consciousness. A fascinating intellectual journey through the history of communication and information, from the language of Africa's talking drums to the invention of written alphabets; from the electronic transmission of code to the origins of information theory, into the new information age and the current deluge of news, tweets, images, and blogs. Along the way, Gleick profiles key innovators, including Charles Babbage, Ada Lovelace, Samuel Morse, and Claude Shannon, and reveals how our understanding of information is transforming not only how we look at the world, but how we live.
