ESEC '91 Apr 04 2021 The third European Software Engineering Conference follows ESEC'87 and ESEC'89. This series of conferences was set up by the European societies

with the aim of providing an international forum for researchers, developers and users of software engineering technology. The need for a meeting point to discuss new results and useful experiences was clear from the large amount of high-quality European software engineering research in recent years, stimulated, for example, through major European research programmes. The 22 papers in these proceedings were selected from 133 papers submitted from 26 different countries. They cover a fairly broad range of themes such as formal methods and practical experiences with them, special techniques for real-time systems, software evolution and re-engineering, software engineering environments, and software metrics. Invited papers by well-known experts address further important areas: perspectives on configuration management, software factories, user interface design, computer security, and technology transfer.

Real Time Computing May 17 2022 NATO's Division of Scientific and Environmental Affairs sponsored this Advanced Study Institute because it was felt to be timely to cover this important and challenging subject for the first time in the framework of NATO's ASI programme. The significance of real-time systems in everyone's life is rapidly growing. The vast spectrum of these systems can be characterised by just a few examples of increasing complexity: controllers in washing machines, air traffic control systems, control and safety systems of nuclear power plants and, finally, future military systems like the Strategic Defense Initiative (SDI). The importance of such systems for the well-being of people requires considerable efforts in research and development of highly reliable real-time systems. Furthermore, the competitiveness and prosperity of entire nations now depend on the early application and efficient utilisation of computer integrated manufacturing systems (CIM), of which real-time systems are an essential and decisive part. Owing to its key significance in computerised defence systems, real-time computing has also a special importance for the Alliance. The early research and development activities in this field in the 1960s and 1970s aimed towards improving the then unsatisfactory software situation. Thus, the first high-level real-time languages were defined and developed: RTL/2, Coral 66, Procol, LTR, and PEARL. In close connection with these language developments and with the utilisation of special purpose process control peripherals, the research on real-time operating systems advanced considerably.

Distributed Computer Control Systems 1995 Jul 27 2020 The series of IFAC Workshops on distributed computer control systems (DCCS) provide the opportunity for leading researchers and practitioners in the field to discuss and evaluate recent advances and current issues in theory, applications and technology of DCCS. DCCS'95, the 13th IFAC workshop in the series was held in Toulouse-Blagnac, France. The topics covered at this meeting included: the role of real-time in DCCS specifications; scheduling methods for DCCS; real-time distributed operating systems and databases and industrial applications and experience with DCCS.

Tort Law: Cases, Perspectives, and Problems Oct 18 2019 The Fourth Edition of this unique casebook has been dramatically revised. This new edition presents the important cases, statutes, empirical data, and competing tort theories in a problems-oriented format that is designed to help students acquire a sophisticated understanding of tort law through active learning. As before, the text includes a large number of problems. Now, however, the Problems, updated and considerably expanded, are organized in Sets at the end of

each substantive chapter. This extensively re-written and reorganized edition includes the classic common law torts cases, but is updated throughout with teachable, cutting-edge decisions that will demand student interest and hold their attention. Particular care has been to take account of the most recent commentaries on tort law, such as the growing importance of the Restatement (Third) of Torts. Chapter One is unique among American torts casebooks in its examination of how the dominant twenty-first century tort theories influence judicial decisionmaking and scholarship. That chapter explains six key perspectives on tort law: • Law and Economics; • Corrective Justice; • Critical Race Theory; • Critical Feminism; • Pragmatism; and • Social Justice Chapter One references the famous McDonald's hot coffee litigation as a case study to illustrate these perspectives in action. Subsequent chapters continue to work through that case study and continually reference the perspectives to explain or challenge the decided cases. The authors seek to provide students with innovative cases and problems, empowering them with practical skills. By exposing students to the most important contemporary tort law theories, the Fourth Edition of this casebook encourages students to go beyond passively memorizing case holdings and the voyeuristic experience of reading appellate opinions and truly gain perspectives on tort law. This eBook features links to Lexis Advance for further legal research options.

Cases and Materials on Torts Feb 14 2022 *Cases and Materials on Torts* preserves historical and conceptual continuity between the present and the past, while addressing the most significant contemporary controversies in such fast-moving areas like public nuisance, global warming, and product liability, with new litigation against internet providers. Toward these dual ends, Richard A. Epstein and Catherine M. Sharkey have retained in the Twelfth Edition the great older cases, both English and American, that have proved themselves time and again in the classroom, and which continue to exert great influence on the modern law. Our book also provides a rich exploration of the dominant corrective justice and law-and-economics approaches to tort law, as exemplified both in the retained and new cases and materials. New to the Twelfth Edition: Extensive new treatment of public nuisance cases to address the profound expansion of the once-sleepy area of public nuisance law into the realms of the opioid crisis, toxic torts, and global warming. Major reconsideration of who counts as a seller in the chain of distribution for goods sold online with product liability updates for various forms of e-commerce, such as Amazon's liability for defective products sold on its site. Updates to incorporate two major new Torts Restatements on Intentional Harms and Liability Insurance. The Reforms of the Michigan No-Fault Legislation Enhanced treatment of privacy in the era of "Big Data" to address trend of large data collectors like Facebook and Google to determine what is reasonable online, incorporating major privacy legislation such as California's Consumer Privacy Act and the European GDPR (General Data Protection Regulation). Expansion of materials that address race and gender disparities in the setting of damages awards; and, in the realm of punitive damages innovative remedies directing some portion of the award to public interest groups.

Professors and students will benefit from: Clear organizational framework of the book. Important lines of cases that help understand legal reasoning and the evolution of precedent Inclusion of key academic commentary and elaboration of central intellectual disputes over the nature and function of the tort law Ability to pick and choose modules of interest – such as defamation, privacy, and economic harms – which are of increasing importance in real world of tort litigation. Extensive notes with topic headlines that elaborate basic concepts and extend into the most complex contemporary issues facing courts. Great attention given to cutting edge tort developments.

HRT-HOODTM: A Structured Design Method for Hard Real-Time Ada Systems Aug 08 2021 The increasing use of computers for real-time control on board spacecrafts has brought with it a greater emphasis on the development methodology used for such systems. By their nature, spacecraft control computers have to operate unattended for long periods and because of the programmatics of space, systems are subject to a long development cycle. As a result, there are two distinct concerns, the first being that the development approach guarantees functional and timing correctness, the second being that problems, particularly those associated with timing, are considered as early as possible in the spacecraft development life cycle. The European Space Agency has, for a number of years, encouraged the development of software using HOOD. It was thus a natural next step to investigate the incorporation of time within the existing HOOD framework. This has proven to be very beneficial and this book describes the approach developed by the authors for handling Hard Real-Time applications. It describes both the background scheduling theory, provides practical examples of its application to real life problems, and demonstrates how it is used in the various phases of the development of Hard Real-Time systems.

Shifting Paradigms in Software Engineering Sep 09 2021 Object-orientation and the need for multi-paradigmatic systems constitute a challenge for researchers, practitioners and instructors. Presentations at the OCG/NJSZT joint conference in Klagenfurt, Austria, in September 1992 addressed these issues. The proceedings comprise such topics as: project management, artificial intelligence - modelling aspects, artificial intelligence - tool building aspects, language features, object-oriented software development, the challenge of coping with complexity, methodology, and experience, software engineering education, science policy, etc.

High-level Petri Nets Feb 02 2021 High-level Petri nets are now widely used in both theoretical analysis and practical modelling of concurrent systems. The main reason for the success of this class of net models is that they make it possible to obtain much more succinct and manageable descriptions than can be obtained by means of low-level Petri nets-while, on the other hand, they still offer a wide range of analysis methods and tools. The step from low-level nets to high-level nets can be compared to the step from assembly languages to modern programming languages with an elaborated type concept. In low-level nets there is only one kind of token and this means that the state of a place is described by an integer (and in many cases even by a boolean value). In high-level nets each token can carry complex information which, e. g. , may describe the entire state of a process or a data base. Today most practical applications of Petri nets use one of the different kinds of high-level nets. A considerable body of knowledge exists about high-level Petri nets this includes theoretical foundations, analysis methods and many applications. Unfortunately, the papers on high-level Petri nets have been scattered throughout various journals and collections. As a result, much of this knowledge is not readily available to people who may be interested in using high-level nets.

Handbook of Modern Hospital Safety Jun 06 2021 It is ironic that those whose job it is to save lives often find themselves injured in the course of performing their duties. In fact, according to the Bureau of Labor Statistics, healthcare workers have higher injury rates than agriculture workers, miners, and construction workers. The Handbook of Modern Hospital Safety, Second Edition covers exposure paradigms and offers solutions and models of protection for these individuals, presenting the latest science and intervention strategies that have proven successful in the scientific community. Extensively revised, this second edition explores a host of hazardous conditions that are faced by healthcare workers in today's hospitals, including: infection and infectious diseases back injuries needlesticks workplace violence slip, trip, and fall injuries ergonomic issues electrocautery smoke toxic drugs ethylene oxide aldehydes pentamidine ribavirin In this long-awaited update to William Charney's seminal work, experts from leading hospitals, universities, and health organizations explore these health risks and suggested preventive measures, discuss recent research and new information on technology to protect workers, cover new legislation and regulations, and provide insight into the philosophy of creating a safe hospital culture.
