This compelling story of exploration charts and celebrates humankind in space, from Sputnik's launch in 1957 through the Apollo Moon landings and the International Space Station to future missions to Mars and beyond. Spaceflight chronicles how, in the half-century that followed Sputnik, the world was revolutionized by space travel and exploration. The opening up of Earth's orbit to satellites led to a revolution in communications, monitoring of the environment, and materials science. For the human imagination, the impact has been even greater: the voyages of robotic space probes have transformed our view of the Solar System, while Earth-orbiting satellites and missions to the Moon have forever changed our view of ourselves. This book is a celebration of human ingenuity and imagination. From the work of pioneers like Wernher von Braun, Yuri Gagarin, and Neil Armstrong to the triumphs and tragedies that followed, it reveals the people, science, and technology that have propelled us into the Space Age. Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

This volume is, first and foremost, a story of the relations between space, time and navigation, from the rise of the chronometer in the United States to the Global Positioning System of satellites, for which the Naval Observatory provides the time to a billionth of a second per day. It is a story of the history of technology, in the form of telescopes, lenses, detectors, calculators, clocks and

computers over 170 years. It describes how one scientific institution under government and military patronage has contributed, through all the vagaries of history, to almost two centuries of unparalleled progress in astronomy. Sky and Ocean Joined will appeal to historians of science, technology, scientific institutions and American science, as well as astronomers, meteorologists and physicists. Excerpt from How to Find the Stars: With Indications of the Most Interesting Objects in the Starry Heavens, and an Account of the Astronomical Lantern and Its Use The Planets (from the Greek word meaning to which move among the fixed stars, cannot be represented on this Lantern. Nor is it necessary, since it is very easy to identify the principal planets: Venus, Jupiter, Mars, Saturn. Mercury is less easily perceived, but may sometimes be discovered just after sunset, in the western Sky, especially in 'march. Seen through a telescope, even of low power, Venus, Jupiter, and Saturn are very interesting Objects. Venus is Often seen as a brilliant crescent, especially when it is brightest. I once showed it to a working man, through my telescope, and he manifested no surprise. He thought he was looking at the moon. Jupiter, with his belts and four satellites, always arranged on a nearly straight line, is surprisingly beautiful. Saturn, hanging in the sky, with its marvellous ring, self-suspended, surrounding it, is always an Object of great interest. A telescope of low power shows these Objects to advantage. It gives the names, positions, sizes and other key facts of all the planets and their satellites; discusses the Sun in depth, from sunspots to solar eclipses; lists the dates for cometary returns, close-approach asteroids, and significant meteor showers; and includes 88 star charts, with the names, positions, magnitudes and spectra of the stars, along with key data on nebulae and clusters. Full of facts and figures, this is the only book you need to look up data about astronomy. It is destined to become the standard reference for everyone interested in astronomy. Mr. Meek was having his troubles. First, the educated bugs worried him; then the welfare worker tried to stop the Ring Rats' feud by enlisting his aid. And now, he was a drafted space-polo player—a fortune bet on his ability at a game he had never played in his cloistered life. Four centuries ago, Galileo first turned a telescope to look up at the night sky. His discoveries opened the cosmos, revealing the geometry and dynamics of the solar system. Today's telescopic equipment, stretching over the whole

spectrum from visible light to radio and millimetre astronomy, through infrared to ultraviolet, X-rays and gamma rays, has again transformed our understanding of the whole Universe. In this book Francis Graham-Smith explains how this technology can be engaged to give us a more in-depth picture of the nature of the universe. Looking at both ground-based telescopes and telescopes on spacecraft, he analyses their major discoveries, from planets and pulsars to cosmology. Large research teams and massive data handling are necessary, but the excitement of discovery is increasingly shared by a growing public, who can even join in some of the analysis by remote computer techniques. Observational astronomy has become international. All major projects are now partnerships; most notably the Square Kilometre Array, which will involve astronomers from over 100 countries and will physically exist in several of them. Covering the history and development of telescopes from Galileo to the present day, *Eyes on the Sky* traces what happens when humankind looks up. One minute, Rachel is taking a break from babysitting. The next, she's escaping the Earth on a pedal-powered interplanetary bus. It could happen to anybody. It could. Generally it doesn't, but it could. Because what Rachel soon learns is that Earth is infected with Math, which is why we look at our solar system and see freezing balls of ice, gas, and rock whirling lifelessly through a hostile void. Everyone else sees air pirates sailing the Seven Skies of

Saturn, the endless exciting fight scenes of Mars, the sullen ghosts of Pluto, and much more. "More" including the Lighthouse of Ceres, the waypoint for all travelers of the solar system. That's where Rachel ends up, and where she finds out her hobbies of sketching and storytelling make her a genius at repairing Math-free spaceships. She loves it, and no one makes her reveal she's from the quarantined, much-feared planet Earth. Instead they make up their own ideas of who she is and where she's from. Very dangerous ideas... The technologically groundbreaking novel of space exploration from the only science fiction author nominated for a Nobel Peace Prize. Roy Malcolm has always been fascinated by space travel. And when he wins a voyage to the Inner Space Station as a game show prize, he's sure it's the trip of a lifetime. Before long, Roy is taken in by the young crew—and shares their adventures and lives. One of Arthur C. Clarke's earliest novels, *Islands in the Sky* is particularly noteworthy for its description of geostationary communications satellites. While this technology was nonexistent during the writing of this book, it later became commonplace—and Clarke is credited with the first practical descriptions of such technology. This book is compelling not just as a fictional tale, but as an example of the prescient power of Clarke's vision. "[Clarke is] one of the truly prophetic figures of the space age." —The New Yorker Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown

unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever. For the first time in one volume, Phil Edmonston, Canada's automotive "Dr. Phil," covers all used vehicles, packing this guide with insider tips to help the consumer make the safest and cheapest choice possible from cars and trucks of the past 25 years. Lupe Impala, El Chavo Flapjack, and Elirio Malaria love working with cars. You name it, they can fix it. But the team's favorite cars of all are lowriders—cars that hip and hop, dip and drop, go low and slow, bajito y suavequito. The stars align when a contest for

the best car around offers a prize of a trunkful of cash—just what the team needs to open their own shop! ¡Ay chihuahua! What will it take to transform a junker into the best car in the universe? Striking, unparalleled art from debut illustrator Raul the Third recalls ballpoint-pen-and-Sharpie desk-drawn doodles, while the story is sketched with Spanish, inked with science facts, and colored with true friendship. With a glossary at the back to provide definitions for Spanish and science terms, this delightful book will educate and entertain in equal measure. Oceans were long thought to exist in all corners of the Solar System, from carbonated seas percolating beneath the clouds of Venus to features on the Moon's surface given names such as "the Bay of Rainbows" and the "Ocean of Storms." With the advent of modern telescopes and spacecraft exploration these ancient concepts of planetary seas have, for the most part, evaporated. But they have been replaced by the reality of something even more exotic. For example, although it is still uncertain whether Mars ever had actual oceans, it now seems that a web of waterways did indeed at one time spread across its surface. The "water" in many places in our Solar System is a poisoned brew mixed with ammonia or methane. Even that found on Jupiter's watery satellite Europa is believed similar to battery acid. Beyond the Galilean satellites may lie even more "alien oceans." Saturn's planet-sized moon Titan seems to be subject to methane or ethane rainfall. This

creates methane pools that, in turn, become vast lakes and, perhaps, seasonal oceans. Titan has other seas in a sense, as large shifting areas of sand covering vast plains have been discovered. Mars also has these sand seas, and Venus may as well, along with oceans of frozen lava. Do super-chilled concoctions of ammonia, liquid nitrogen, and water percolate beneath the surfaces of Enceladus and Triton? For now we can only guess at the possibilities. 'Alien Seas' serves up part history, part current research, and part theory as it offers a rich buffet of "seas" on other worlds. It is organized by location and by the material of which various oceans consist, with guest authors penning specific chapters. Each chapter features new original art depicting alien seas, as well as the latest ground-based and spacecraft images. Original diagrams presents details of planetary oceans and related processes. Blast off into space with this Hidden Pictures puzzle book! Featuring over 100 out-of-this-world scenes and more than 1,800 hidden objects to find in Highlights trademark black-and-white puzzles, Space Puzzles is a perfect gift for future astronauts ages 6-12. With illustrations of astronaut activities, wacky aliens, and more otherworldly adventures, kids will love puzzling and giggling their way through this galactic collection. Can you find the peanut on a planet or spy the banana in orbit? Space Puzzles is sure to please every space-loving child! This 144-page book is great for on-the-go travel (on Earth or outer space!), after-school fun or

screen-free entertainment on rainy days. Each space-themed puzzle is carefully designed to engage and entertain children while honing their concentration skills, visual perception, critical-thinking ability and attention to detail. Finding the hidden objects gives puzzlers a confidence boost, making it great for the entire family. In 2066, a Caltech intern notices an anomaly from a space telescope—something is approaching Saturn, and decelerating. Space objects don't decelerate. Spaceships do... A flurry of top-level government meetings produce the inescapable conclusion: Whatever built the ship is at least one hundred years ahead of our technology, and whoever can get their hands on it will have an advantage so large, no other nation can compete. The race is on, and a remarkable adventure begins. Soon a hastily thrown-together crew finds its strength and wits tested against adversaries of this earth and beyond. So buckle up, because two perfectly matched storytellers are about to take you for a ride... Reviews the history of the military's use of satellites since the flight of Sputnik 1, discusses lesser-known nuclear powers such as the

United Kingdom and France, and argues for nuclear non-proliferation. Lemon-Aid Used Cars and Trucks 20102011 shows buyers how to pick the cheapest and most reliable vehicles from the past 30 years of production. This book offers an exposé gas consumption lies, a do-it-yourself service manual, an archive of service bulletins granting free repairs, and more. As Toyota skids into an ocean of problems and uncertainty continues in the U.S. automotive industry, Lemon-Aid Used Cars and Trucks 20112012 shows buyers how to pick the cheapest and most reliable vehicles from the past 30 years. Lemon-Aid guides are unlike any other car and truck books on the market. Phil Edmonston, Canada's automotive Dr. Phil for 40 years, pulls no punches. Like five books in one, Lemon-Aid Used Cars and Trucks is an exposé of car scams and gas consumption lies; a do-it-yourself service manual; an independent guide that covers beaters, lemons, and collectibles; an archive of secret service bulletins granting free repairs; and a legal primer that even lawyers can't beat! Phil delivers the goods on free fixes for Chrysler, Ford, and GM engine, transmission, brake, and paint defects; lets you know about Corvette and Mustang tops that fly off; gives the lowdown on Honda, Hyundai, and Toyota engines and transmissions; and provides the latest information on computer module glitches. The Caldwell Catalogue, compiled by the late Sir Patrick Moore (1923-2012), has delighted amateur astronomers worldwide since its

publication in 1995. Twenty years on, Stephen James O'Meara revisits his guide to these 109 deep-sky delights, breathing new life into them and the 20 additional observing targets included as an appendix. This second edition retains O'Meara's detailed visual descriptions and sketches, accompanied by stunning new images taken by amateur photographer Mario Motta and observations by Magda Streicher. The astrophysical descriptions have been updated to account for the many advances in our understanding of the objects, not least due to an armada of space-borne observatories and the new technologies used in large ground-based telescopes. Ideal for observers who have completed the Messier objects and are looking for their next challenge, Deep-Sky Companions: The Caldwell Objects is a fitting tribute from a renowned visual observer to one of astronomy's most famous personalities. For more than 39 years, millions of consumers have turned to Edmunds' buyer's guides for their shopping needs.
