This all-new edition of the latest guide to passenger cars, minivans, and sport-utility vehicles features photos of the newest models, the latest suggested retail and dealer invoice prices factory options, EPA mileage estimates, warranty information, and more. Original. This report examines elements of the design and operation of hypolimnetic aeration systems. Three basic types of hypolimnetic aerators are identified, and pertinent

literature for each is reviewed. Hypolimnetic aeration with pure oxygen (i.e. hypolimnetic oxygenation) at Clarks Hill Reservoir, Georgia-South Carolina, is overviewed. Included are results of hypolimnetic aeration field test conducted by contractors and the US Army Corps of Engineers at Clarks Hill. Results from these test showed that, for hypolimnetic oxygenation to most effectively enhance downstream release, most of the input oxygen should be placed (1) within the hypolimnetic withdrawal zone and (2) by a linear diffuser. A number of hypolimnetic aerator designs are considered. The use of numerical simulation techniques to predict idealized values for aerator design is also discussed. A combination of such results from the Clarks Hill field tests and numerical simulation efforts has produced the initial design for a hypolimnetic oxygenation system at Richard B. Russell Reservoir, South Carolina-Georgia, which is presented herein.

The detailed presentation of fundamental aerodynamics principles that influence and improve vehicle design have made *Aerodynamics of Road Vehicles* the engineer's "source" for information. This fifth edition features updated and expanded information beyond that which was presented in previous releases. Completely new content covers lateral stability, safety and comfort, wind noise, high performance vehicles, helmets, engine cooling, and computational fluid dynamics. A proven, successful engineering design approach is presented that includes:

- Fundamentals of fluid mechanics related to vehicle aerodynamics
- Essential experimental results that are the ground rules of fluid mechanics
- Design strategies for individual experimental results
- General design solutions from combined experimental results

The aerodynamics of passenger cars, commercial vehicles, motorcycles, sports cars, and race cars is dealt with in detail, inclusive of systems, testing techniques, measuring and numerical aerodynamics methods and simulations that significantly contribute to vehicle development. *Aerodynamics of Road Vehicles* is an excellent reference tool and an indispensable source for the industry's vehicle engineers, designers, and researchers, as well as for enthusiasts, students, and those working in academia or government regulatory agencies.
