This book which describes the world of metallurgical processing is influenced by a variety of factors not directly metallurgical. One major factor in all applications is materials handling. In Pyro-metallurgical processes, the processes are interconnected by materials handling systems which often require a major percentage of plant cost. The systems include sampling, storage, weighing, feeding and transporting of materials which all actively affect the performance of the metallurgical processes. Increasing productivity and improvements to plant environment demand that materials handling be improved. At the same time, sophisticated sampling and control systems are required to optimize the recipes and allow controlled reactions. By using handling technologies that accommodate both the process and the environment, sustainable improvements can be made. This book discusses the methods for determination of data on thermal conductivity, thermal diffusivity, unit surface conductance or the heat transfer coefficient of foods and agricultural materials. It includes the applications of thermal properties in relation to cooling and thermal expansion. The protection and preservation of a product, the launch of new products or re-launch of existing products, perception of added-value to products or services, and cost reduction in the supply chain are all objectives of food packaging. Taking into consideration the requirements specific to different products, how can one package successfully meet all of these goals? Food Packaging Technology provides a contemporary overview of food processing and packaging technologies. Covering the wide range of issues you face when developing innovative food packaging, the book includes: Food packaging strategy, design, and development Food biodeterioration and methods of preservation Packaged product quality and shelf life Logistical packaging for food marketing systems Packaging materials and processes The battle rages over which type of container should be used for which application. It is therefore necessary to consider which materials, or combination of materials and processes will best serve the market and enhance brand value. Food Packaging Technology gives you the tools to determine which form of packaging will meet your business goals without compromising the safety of your product.
