This revised recommendation continues to focus on storing metadata to support video analytics. At the FBI's request, NIST conducted research and developed NISTIR 8161 as a recommendation to address the FBI's minimum interoperability requirements for the exporting and exchange of video recordings captured by closed circuit television (CCTV) digital video recording (DVR) systems. NIST termed these requirements 'Level 0'. Subsequently, NIST shared its findings and recommendations with video industry hardware and software manufacturers, and the relevant standards community. This led to NIST collaborating with the Open Network Video Interface Forum (ONVIF) to enhance their Export File Format Specification to support the essential functionality of NISTIR 8161. Working with ONVIF has improved the likelihood of industry's adaptation to law enforcement requirements. Additionally, ONVIF contributed its Export File Format Specification to the International Electrotechnical Commission (IEC) for inclusion in IEC 62676-2-32, Video surveillance systems for use in security applications - Part 2-32: Recording control and replay based on web services (expected publication mid-2019). NIST recommends industry implementation of the ONVIF and IEC standards noted above. These standards provide acceptable alternative implementation approaches to what NIST proposed in NISTIR 8161 for recording and storing time information. The standards also provide additional useful capabilities including the recording of additional metadata and a means to ensure data integrity and chain of custody using a digital signature. The recommendations provided in this document are intended to support law enforcement investigations. This document was prepared by the National Institute of Standards and Technology (NIST), in collaboration with the Federal Bureau of Investigation (FBI), and in conjunction with the CCTV / DVR community. The Official (ISC)2® Guide to the CISSP®-ISSEP® CBK® provides an inclusive analysis of all of the topics covered on the newly created CISSP-ISSEP Common Body of Knowledge. The first fully comprehensive guide to the CISSP-ISSEP CBK, this book promotes understanding of the four ISSEP domains: Information Systems Security Engineering

(ISSE); Certification and Accreditation; Technical Management; and an Introduction to United States Government Information Assurance Regulations. This volume explains ISSE by comparing it to a traditional Systems Engineering model, enabling you to see the correlation of how security fits into the design and development process for information systems. It also details key points of more than 50 U.S. government policies and procedures that need to be understood in order to understand the CBK and protect U.S. government information. About the Author Susan Hansche, CISSP-ISSEP is the training director for information assurance at Nortel PEC Solutions in Fairfax, Virginia. She has more than 15 years of experience in the field and since 1998 has served as the contractor program manager of the information assurance training program for the U.S. Department of State.

The world seems to be getting smaller and business moving much faster. To be successful in this type of environment you need instantaneous access to any information, immediate responses to queries, and constant availability, on a worldwide basis, and in a world where the volume of data is growing exponentially. You need the best resources you can get, and ones that can satisfy those needs. IBM® can help. A primary component that can affect performance is access to disk-based data. And, as data volumes grow, so does the performance impact. To improve performance, it is time to look for technology enhancements that can mitigate that impact. IBM solidDB® is powerful relational, in-memory caching software that can accelerate traditional disk-based relational database servers by caching performance-critical data into one or more solidDB in-memory database instances. This capability can enable significant performance improvements. It brings data closer to the application so you can use a faster and more efficient data access paradigm. The result? Faster delivery of information for your queries to enable faster analysis and decision-making that can give you a significant business advantage. Have questions? Many of the answers you need are contained in this IBM Redbooks® publication. First Published in 2008. Routledge is an imprint of Taylor & Francis, an informa company.
