In Illinois Zoning, Eminent Domain and Land Use Manual, three partners in the Chicago offices of the national law firms of DLA Piper LLP (U.S.) and Polsinelli Shughart, P.C. share their decades of experience in the area of land use and eminent domain law. These attorneys have been involved in millions of square feet of development, representing many of the most well-known projects in Illinois and throughout the country. Using their book, you will learn the practical and strategic considerations in planning and litigating a land use case in Illinois. This manual will examine the all-too-often overlooked municipal presentation stage. And you will profit from the book's comprehensive approach and helpful array of forms, checklists, and illustrations. 117891 1. 1 Purpose and Plan of This Review This review is focused on the topography and connections of some of the neuron populations that determine the manual dexterity of the macaque monkey. The populations selected for examination are the following: 1. The corticospinal neuron populations 2. The thalamocortical and corticothalamic neuron populations associated with the sensorimotor cortex 3. The ipsilateral cortical connections of the sensorimotor cortex These neuron populations have been chosen because of their obvious relevance to the directed, intelligent use of the hands, but also because of their anatomical and functional interdependence. Corticospinal neuron populations transmit a complex, orchestrated output from a number of different regions of cerebral cortex to the neuron populations in every segment of the spinal cord, and this output includes the command information defining the intended manual action. The thalamocortical complex is especially concerned with the transmission and modulation or filtering of (a) visual, tactile, proprioceptive, vestibular, and auditory information to the cerebral cortex and (b) information from the cerebellum, basal ganglia, limbic system, and brain stem which is relevant to sensorimotor behavior. Finally, the extensive ipsilateral cortical connections constitute a major part of the supraspinal circuitry which coordinates the contributions of all the cortical neuron populations contributing to intelligent sensorimotor behavior and, in particular, transmits the cross talk between those cortical neuron populations which shape and control the dextrous handling of objects within reach.
