The eighth campaign of the Cross Language Evaluation Forum (CLEF) for - ropean languages was held from January to September 2007. There were seven distinct

evaluation tracks in CLEF 2007, designed to test the performance of a wide range of multilingual information access systems or system components. CLEF is by now an established international evaluation initiative and, in 2007, 81 groups from all over the world submitted results for one or more of the different evaluation tracks. Full details regarding the design of the tracks, the methodologies used for evaluation, and the results obtained by the participants can be found in the different sections of these proceedings. As always the results of the campaign were reported and discussed at the annual workshop, held in Budapest, Hungary, 19-21 September, immediately following the eleventh European Conference on Digital Libraries. The workshop plays an important role by providing the opportunity for all the groups that have participated in the evaluation campaign to get together to compare approaches and exchange ideas. In the past 17 years, *Pediatric Hypertension* has served as the definitive reference text on hypertension in children and adolescents. Each edition has incorporated the latest research on the pathophysiology, clinical significance and management of hypertension in the young, and has incorporated the most current consensus guidelines on diagnosis and management. The years since publication of the fourth edition have seen further advances in the field that merit publication of an updated, expanded text, including:

- Analysis of the implications of updated hypertension guidelines on identification of children at highest cardiovascular risk
- Additional data on the proximate effects of high blood pressure in children in adolescents
- Further understanding of the links between high blood pressure in youth and surrogate markers of adult cardiovascular disease

The fifth edition is a readable, informative text that provides a comprehensive guide to the diagnosis, management and therapy of hypertension in children and adolescents, and presents new data that very clearly indicate that the origins of adult cardiovascular disease are rooted in pediatric hypertension. It will, as a result, be very important for therapeutic decisions and will also be highly relevant for those in internal medicine and primary care for the millions of adults who have hypertension, cardiovascular disease and related disease. In this sense, the book fulfills the longstanding goal of showing that hypertension that begins in childhood is important to track, diagnose and treat, and that the understanding of adult hypertension necessitates the study of blood pressure in childhood. The fifth edition has a similar structural format to the prior editions and covers all aspects of pediatric hypertension, from basic science research to the most recent clinical information. The book's strength is its breadth and depth of coverage taking the reader from an overview of the PLC through ladder logic, structured sequential function chart, and function block programming. PROGRAMMABLE LOGIC CONTROLLERS WITH CONTROLLOGIX also covers industrial sensors, PLC modules and wiring, as well as motion control using ControlLogix through two-axis coordinated motion (linear and circular) is also covered. To aid in learning, the book features videos with Camtasia learning videos and explanations of setup of RSLinx, project development, tag creation, configuration, instructions and much more. Appendixes cover configuration, remote I/O, producer/consumer communication, messaging, and motion configuration and programming. Students learn more and more easily because of the breadth of practical coverage, numerous examples and extensive exercises.
