Nursing Informatics for the Advanced Practice Nurse Nov 13 2019 Designed specifically for graduate-level nursing informatics courses, this is the first text to focus on using technology with an interprofessional team to improve patient care and safety. It delivers an expansive and innovative approach to devising practical methods of optimizing technology to foster quality of patient care and support population health initiatives. Based on the requirements of the DNP Essential IV Core Competency for Informatics and aligning with federal policy health initiatives, the book describes models of information technology the authors have successfully used in health IT, as well as data and analytics used in business, for-profit industry, and not-for-profit health care association settings, which they have adapted for nursing practice in order to foster optimal patient outcomes. The authors espouse a hybrid approach to teaching with a merged competency and concept-based curriculum. With an emphasis on the benefits of an interprofessional team, the book describes the most effective approaches to health care delivery using health information technology. It describes a nursing informatics model that is comprised of three core domains: point-of-care technology, data management and analytics, and patient safety and quality. The book also includes information on point-of-care applications, population health, data management and integrity, and privacy and security. New and emerging technologies explored include genomics, nanotechnology, artificial intelligence, and data mining. Case studies and critical thinking exercises support the concept-based curriculum and facilitate out-of-the-box thinking. Supplemental materials for instructors include PowerPoint slides and a test bank. While targeted primarily for the nursing arena, the text is also of value in medicine, health information management, occupational therapy, and physical therapy. Key Features: Addresses DNP Essential IV Core Competency for Informatics Focuses specifically on using nursing informatics expertise to improve population health, quality, and safety Advocates an interprofessional team approach to optimizing health IT in all practice settings

Stimulates critical thinking skills that can be applied to all aspects of IT health care delivery Discusses newest approaches to interprofessional education for IT health care delivery
Computer Science – CACIC 2020 Mar 30 2021 This book constitutes revised selected papers from the 26th Argentine Congress on Computer Science, CACIC 2020, held in San Justo, Buenos Aires, Argentina in October 2020. Due to the COVID-19 pandemic the conference was held in a virtual mode. The 21 full papers and 3 short papers presented in this volume were carefully reviewed and selected from a total of 118 submissions. They were organized in topical sections named: intelligent agents and systems; distributed and parallel processing; computer technology applied to education; graphic computation, images and visualization; software engineering; databases and data mining; hardware architectures, networks, and operating systems; innovation in software systems; signal processing and real-time systems; innovation in computer science education; computer security; and digital governance and smart cities.

Department of Transportation and Related Agencies Appropriations for 2000 Feb 26 2021

Mastering Hyper-V Deployment Sep 16 2022 The only book to take an in-depth look at deploying Hyper-V Now in its second generation, the popular Hyper-V boasts technical advances that create even more dynamic systems than ever before. This unique resource serves an authoritative guide to deploying Windows Server 2008 R2 Hyper-V comprehensively. Step-by-step instructions demonstrate how to design a Hyper-V deployment, build a Hyper-V host environment, and design a management system with System Center Virtual Machine Manager 2008 R2. Features real-world examples that show you how to design a Hyper-V deployment, build a Hyper-V host environment, and design a management system Walks you through incorporating System Center Operations Manager 2008 R2, System Center Data Protection Manager 2010, and System Center Essentials 2010 Offers authoritative coverage of Hyper-V security, business continuity, and an array of VM roles, including domain controllers, Exchange Server, SQL Server, and System Center This in-depth guide is the ultimate resource for system administrators, engineers, and architects, and IT consultants deploying Hyper-V.

Project Management in the Ed Tech Era Jun 01 2021 This book is focused on project planning and project management of IT projects in the education realm.

Integrated IT Project Management Jul 14 2022 Annotation "Integrated IT Project Management: A Model-Centric Approach utilizes practical applications of real-world policies, roles and responsibilities, templates, process flows, and checklists for each of these three component processes. It shows how such processes ensure optimum utilization of people, process, and technology resources during the management and delivery of IT projects. The book provides insight into the key components of the Rational Unified Process from IBM Rational Corporation and the Project Management Body of knowledge PMBOK from the Project Management Institute (PMI) illustrating how they work together and align based on industry processing standards."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

The Complete Project Management Office Handbook, Third Edition Apr 30 2021 This updated and completely revised edition of a bestseller extends the concepts and considerations of modern project management into the realm of project management oversight, control, and support. Illustrating the implications of project management in today's organizations, The Complete Project Management Office Handbook, Third Edition explains how to use the project management office (PMO) as a business integrator to influence project outcomes in a manner that serves both project and business management interests. Helping you determine if a PMO is right for your organization, this edition presents a five-stage PMO competency continuum to help you understand how to develop PMOs at different competency levels and associated functionalities. It also identifies five progressive PMO development levels to help you identify which level is best for your organization. Updates to this edition include: A refinement of the 20 PMO functions that guide PMO setup and operations A new section that provides an effective evaluation of PMO maturity indicators based on the prescribed 20 PMO functions presented in the handbook A new section on Establishing a Project Management Office that details a comprehensive process for determining the needs, purpose, and functionality for a new PMO Best practices that have cross-industry value and applicability The book includes checklists, detailed process steps, and descriptive

guidance for developing PMO functional capability. The up-to-date PMO model defined will not only help you better understand business practices in project management, but will also help you to adapt and integrate those practices into the project management environment in your organization. For anyone associated with start-up and smaller PMOs, the book explains what can be done to create less rigorous PMO functional capabilities. It also includes helpful insights for those who need to specify and demonstrate "quick-wins" and early PMO-based accomplishments in their organization.

Sustaining a Culture of Process Control and Continuous Improvement Oct 13 2019 This comprehensive book presents a methodology for continuous process improvement in a structured, logical, and easily understandable framework based on industry accepted tools, techniques, and practices. It begins by explaining the conditions necessary for establishing a stable and capable process and the actions required to maintain process control, while setting the stage for sustainable efficiency improvements driven by waste elimination and process flow enhancement. This structured approach makes a clear connection between the need for a quality process to serve as the foundation for incremental efficiency improvements. This book moves beyond talking about the value contribution of tools and techniques for process control and continuous improvement by focusing on the daily work routines necessary to maintain and sustain these activities as part of a lean process and management mindset. Part 1 discusses process quality improvement with an understanding of variation and its impact on process performance. It continues by stressing the importance of standardizing a process to achieve process stability. Once process stability is reflected in a consistent and predictable output, attention is turned to ensuring the process is capable of consistently meeting customer requirements. This series of activities sets the foundation for process control and the sustainable pursuit of efficiency improvements. Part 2 focuses on efficiency improvement by eliminating waste while improving process flow using proven tools and methods. Although there is a clear relationship between waste elimination and process flow, these activities are discussed separately to allow those more interested in waste elimination to work independently from those looking to optimize value stream flow. Part 3 explores the principles, practices, systems, and behaviors required to maintain process control while creating a mindset of continuous incremental improvement. It considers the role organizational structure, discipline, and accountability play as essential components for long term operational success. This book will: Provide readers with a clear roadmap for establishing, achieving, and maintaining process control as the foundation upon which to pursue efficiency improvements. Establish direction and methods for continuous and sustainable process improvement Define the practices, systems, and behaviors required to realize desired results and develop a culture of process control and continuous improvement along the road to operational excellence.

Statewide Transit Intelligent Transportation Systems Deployment Plan Jan 08 2022 In early 2002, the Iowa Department of Transportation engaged a consultant to help develop a statewide transit ITS plan. Iowa DOT intended to provide a means for transit agencies in the state's rural and small urban communities to utilize Intelligent Transportation Systems (ITS) applications to support and enhance transit operations. Although several of the state's transit agencies have implemented ITS applications, most agencies continue to rely on manual procedures for operations, management, and customer service functions. This endeavor is a logical extension of Iowa's planning and deployment in the ITS arena. In 2001 Iowa DOT completed a project to produce a statewide ITS deployment plan. While the project has been technology-oriented, it also supports the broader objectives of the State of Iowa as well as the participating communities. Foremost among these objectives is to provide efficient and effective transit services that meet the needs of rural and small urban communities. The implementation of technology is, therefore, not for technology's sake; it is to improve transit services. ITS technology is a tool, and the project has defined a way of deploying these tools to serve transit agencies and transit users throughout the state.

Deployment Guide for InfoSphere Guardium Oct 05 2021 IBM® InfoSphere® Guardium® provides the simplest, most robust solution for data security and data privacy by assuring the integrity of trusted information in your data center. InfoSphere Guardium helps you reduce support costs by automating the entire compliance auditing process across heterogeneous environments. InfoSphere Guardium offers a flexible and scalable solution to support varying customer architecture requirements. This IBM

Redbooks® publication provides a guide for deploying the Guardium solutions. This book also provides a roadmap process for implementing an InfoSphere Guardium solution that is based on years of experience and best practices that were collected from various Guardium experts. We describe planning, installation, configuration, monitoring, and administering an InfoSphere Guardium environment. We also describe use cases and how InfoSphere Guardium integrates with other IBM products. The guidance can help you successfully deploy and manage an IBM InfoSphere Guardium system. This book is intended for the system administrators and support staff who are responsible for deploying or supporting an InfoSphere Guardium environment.

Design, Deployment and Performance of 4G-LTE Networks Jan 28 2021 This book provides an insight into the key practical aspects and best practice of 4G-LTE network design, performance, and deployment. Design, Deployment and Performance of 4G-LTE Networks addresses the key practical aspects and best practice of 4G networks design, performance, and deployment. In addition, the book focuses on the end-to-end aspects of the LTE network architecture and different deployment scenarios of commercial LTE networks. It describes the air interface of LTE focusing on the access stratum protocol layers: PDCP, RLC, MAC, and Physical Layer. The air interface described in this book covers the concepts of LTE frame structure, downlink and uplink scheduling, and detailed illustrations of the data flow across the protocol layers. It describes the details of the optimization process including performance measurements and troubleshooting mechanisms in addition to demonstrating common issues and case studies based on actual field results. The book provides detailed performance analysis of key features/enhancements such as C-DRX for Smartphones battery saving, CSFB solution to support voice calls with LTE, and MIMO techniques. The book presents analysis of LTE coverage and link budgets alongside a detailed comparative analysis with HSPA+. Practical link budget examples are provided for data and VoLTE scenarios. Furthermore, the reader is provided with a detailed explanation of capacity dimensioning of the LTE systems. The LTE capacity analysis in this book is presented in a comparative manner with reference to the HSPA+ network to benchmark the LTE network capacity. The book describes the voice options for LTE including VoIP protocol stack, IMS Single Radio Voice Call Continuity (SRVCC). In addition, key VoLTE features are presented: Semi-persistent scheduling (SPS), TTI bundling, Quality of Service (QoS), VoIP with C-DRX, Robust Header Compression (RoHC), and VoLTE Vocoders and De-Jitter buffer. The book describes several LTE and LTE-A advanced features in the evolution from Release 8 to 10 including SON, eICIC, CA, CoMP, HetNet, Enhanced MIMO, Relays, and LBS. This book can be used as a reference for best practices in LTE networks design and deployment, performance analysis, and evolution strategy. Conveys the theoretical background of 4G-LTE networks. Presents key aspects and best practice of 4G-LTE networks design and deployment. Includes a realistic roadmap for evolution of deployed 3G/4G networks. Addresses the practical aspects for designing and deploying commercial LTE networks. Analyzes LTE coverage and link budgets, including a detailed comparative analysis with HSPA+. References the best practices in LTE networks design and deployment, performance analysis, and evolution strategy. Covers infrastructure-sharing scenarios for CAPEX and OPEX saving. Provides key practical aspects for supporting voice services over LTE. Written for all 4G engineers/designers working in networks design for operators, network deployment engineers, R&D engineers, telecom consulting firms, measurement/performance tools firms, deployment subcontractors, senior undergraduate students and graduate students interested in understanding the practical aspects of 4G-LTE networks as part of their classes, research, or projects.

Evaluation of the ITS Planning Process Aug 15 2022 Planning for the deployment of ITS in regions throughout the United States has been underway since the development of the Early Deployment Program by the Federal Highway Administration (FHWA) in 1992. In 1993, the FHWA released Version 1.0 of the ITS Planning Process, a systems planning process provided as a guide to those undertaking regional ITS planning efforts. The FHWA asked the Virginia Transportation Research Council (VTRC) to evaluate and revise Version 1.0 of the ITS Planning Process as part of the early deployment planning project, COMPARE, in Hampton Roads, Virginia. The study team, which included researchers from the VTRC and Old Dominion University, carried out the following four tasks: (1) comparison of the ITS Planning Process with other large scale systems planning processes; (2) interviews of participants in other early deployment planning projects in the United States; (3) participation in the COMPARE project; and (4)

evaluation of the deliverables from COMPARE. The researchers recommended several revisions to the ITS Planning Process. The revisions reflect that fact that ITS planning needs to be integrated into the traditional regional transportation planning framework. The main emphasis of the revised process, Version 2.0, is that planning result in implementation. The major changes include the following: Replace the inventory with a "current assessment" element. Stress the need for a vision of the future regional transportation system. Insert steps to conduct an environmental scan and SWOT analysis. Emphasize the importance of beginning the process with a strong coalition that is constantly expanding. Add a step defining regional transportation goals. Map ITS user services into the regional transportation goals. Establish relatively simple measures for success for each prioritized user service. Stress the importance of defining system interface standards. Dedicate a large proportion of the work to the creation of the Strategic Deployment Plan, which should include alternative product packages based on various levels of funding and different partnership alternatives.

Subversion 1.6 Official Guide Feb 09 2022 This is the official guide and reference manual for Subversion 1.6 - the popular open source revision control technology.

Industrial Deployment of System Engineering Methods Jul 02 2021 A formal method is not the main engine of a development process, its contribution is to improve system dependability by motivating formalisation where useful. This book summarizes the results of the DEPLOY research project on engineering methods for dependable systems through the industrial deployment of formal methods in software development. The applications considered were in automotive, aerospace, railway, and enterprise information systems, and microprocessor design. The project introduced a formal method, Event-B, into several industrial organisations and built on the lessons learned to provide an ecosystem of better tools, documentation and support to help others to select and introduce rigorous systems engineering methods. The contributing authors report on these projects and the lessons learned. For the academic and research partners and the tool vendors, the project identified improvements required in the methods and supporting tools, while the industrial partners learned about the value of formal methods in general. A particular feature of the book is the frank assessment of the managerial and organisational challenges, the weaknesses in some current methods and supporting tools, and the ways in which they can be successfully overcome. The book will be of value to academic researchers, systems and software engineers developing critical systems, industrial managers, policymakers, and regulators.

SharePoint Deployment and Governance Using COBIT 4.1 Aug 03 2021

Operational IT Implementation Management. Transition from IT Projects to IT Operations Mar 18 2020 Bachelor Thesis from the year 2014 in the subject Computer Science - Commercial Information Technology, grade: 1,5, University of Cooperative Education, language: English, abstract: Diese Bachelorarbeit beschäftigt sich mit den Schnittstellen zwischen IT Betrieb und IT Projekten. Dabei wird insbesondere auf die Projektphasen und die Verbindung zwischen den ITSM Prozessen eingegangen. Folgende Fragestellungen stehen dabei im Fokus: - Was ist IT Betrieb und was sind die größten Herausforderungen für den IT Betrieb? - Was sind die speziellen Merkmale von IT Betrieb und IT Projekten? - Welche Verbindung gibt es zwischen IT Betrieb und IT Projekten? - Welche Leistung stellt der IT Betrieb den IT Projekten zur Verfügung? This Work is about IT operations and IT projects. The first part of this thesis describes the general characteristics of IT operations. The next part describes the theory of project management by considering the different lifecycle phases. Additionally, focus is placed on special characteristics of IT projects in general and in particular within the project phases. In this context, development, testing and deployment of the project's outcome must be given special consideration. Chapter 4 deals with the interfaces between IT operations and IT project based on preceding chapters. In addition to organisational aspects, common transition processes were introduced. A further focal point is the interface between IT operations and IT projects. Possible IT operations activities during the project phase and within the transition processes are described and listed. The thesis ends with a conclusion and provides alternative notions that may improve the cooperation between IT operations, projects and transition processes. In particular, answers will be sought for the following questions - What is IT operation and what are the biggest challenges in IT operations? - What are the special characteristics of IT and IT projects? - What kind of relations between IT projects and IT operations exist? - What kind of services are provided by IT operations during an IT project?

Lean Six Sigma, Chapter 6 - Infrastructure and Deployment Planning Apr 11 2022 The following is a sample chapter from Lean Six Sigma, which explains how to impact your company's performance in each, by combining the strength of today's two most important initiatives--Lean Production and Six Sigma--into one integrated program. The first book to provide a step-by-step roadmap for profiting from the best elements of Lean and Six Sigma, this breakthrough volume will show you how to achieve major cost and lead time reductions this year; compress order-to-delivery cycle times; and battle process variation and waste throughout your organization.

Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC) Sep 23 2020 Providing a reasonable level of profitability through productivity is - and will remain - one of the fundamental tasks of the management teams of any production company. Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC): The Path to Competitiveness contains two new methodologies to improving the productivity and profitability of production systems that continuously increase competitiveness: Manufacturing Cost Policy Deployment (MCPD) and Methods Design Concept (MDC). Both MCPD and MDC are the result of long-time synthesis and distillation, being implemented successfully, totally or partially, in many companies. The MCPD system, developed by Alin Postec?, is a manufacturing cost policy aimed at continuous cost improvement through a systemic and systematic approach. The MCPD is a methodology that improves the production flow driven by the need for Manufacturing Cost Improvement (MCI) for both existing and future products through setting targets and means to continuously improve production process productivity for each product family cost. The MDC, developed by Shigeyasu Sakamoto, design the effective manufacturing methods using a tool of engineering steps identifying ideas for increasing productivity called KAIZENSHIRO (improvable value as a target). The MDC results on production methods lead to effectiveness of work measurement for performance (P) and to knowledge and improvement of production control and planning as utilization (U), in order to achieve labor target costs. The combination of MCPD and MDC methodologies can provide a unique approach for the managers who are seeking new ways for increasing productivity and profitability to increase the competitive level of their manufacturing company.

ITS Deployment Guidance for Transit Systems Dec 07 2021 This technical edition provides guidance for the transit community on developing and implementing ITS systems and using the National ITS Architecture. It is written specifically for the transit community and focuses on transit applications of ITS and the National ITS Architecture. It provides practical assistance based on real life experiences with developing and implementing transit ITS systems. This is a comprehensive document that defines the key concepts, products, and components of ITS and the National ITS Architecture. This document serves as a basic reference tool for understanding and deploying ITS in transit. It consists of six major sections and four appendices.

IVHS Planning and Project Deployment Process Jan 20 2023

Review of the Department of Energy's Deployment of DOE-funded Environmental Cleanup Technologies Aug 23 2020

Just Enough Wireless Computing Nov 06 2021 Wireless technology offers immense potential for competitive advantage, starting right now -- but today's wireless landscape can be extraordinarily confusing. This book gives decision makers the clarity, insight, and practical methodology they need to identify the right wireless solutions -- and implement them. Ian S. Hayes offers a practical framework for understanding today's complex array of wireless devices, solution providers, technologies, standards, architectures, and acronyms. Through real-world case studies, practical examples, and illustrations, he helps you determine which wireless solutions offer the greatest business value in your environment -- and walks you through assembling and integrating those solutions. The book contains a detailed glossary of terminology, as well as a comprehensive list of software vendors and consultants, updated on an ongoing basis at the book's companion Web site.

The Software Deployment Mystery - Solved Feb 21 2023

IPv6 Deployment and Management May 12 2022 With the announcement in 2011 that the current Internet Protocol (IP), IPv4, has nearly run out, interest in IPv6 -- the latest IP version -- has grown substantially. This book describes IPv6 technology and its repercussions on organizations, including strategies and techniques for assessing the impact of deploying IPv6 on a network, discovering current IP assets,

assessing network readiness, creating a plan to deploy IPv6 while retaining IPv4 connectivity, and for managing a dual protocol IPv4-IPv6 network. It is a must read for IP network engineers, managers, and those who work in IT.

Internet of Things Applications - From Research and Innovation to Market Deployment Jul 22 2020 The book aims to provide a broad overview of various topics of Internet of Things from the research, innovation and development priorities to enabling technologies, nanoelectronics, cyber physical systems, architecture, interoperability and industrial applications. It is intended to be a standalone book in a series that covers the Internet of Things activities of the IERC – Internet of Things European Research Cluster from technology to international cooperation and the global "state of play". The book builds on the ideas put forward by the European research Cluster on the Internet of Things Strategic Research Agenda and presents global views and state of the art results on the challenges facing the research, development and deployment of IoT at the global level. Internet of Things is creating a revolutionary new paradigm, with opportunities in every industry from Health Care, Pharmaceuticals, Food and Beverage, Agriculture, Computer, Electronics Telecommunications, Automotive, Aeronautics, Transportation Energy and Retail to apply the massive potential of the IoT to achieving real-world solutions. The beneficiaries will include as well semiconductor companies, device and product companies, infrastructure software companies, application software companies, consulting companies, telecommunication and cloud service providers. IoT will create new revenues annually for these stakeholders, and potentially create substantial market share shakeups due to increased technology competition. The IoT will fuel technology innovation by creating the means for machines to communicate many different types of information with one another while contributing in the increased value of information created by the number of interconnections among things and the transformation of the processed information into knowledge shared into the Internet of Everything. The success of IoT depends strongly on enabling technology development, market acceptance and standardization, which provides interoperability, compatibility, reliability, and effective operations on a global scale. The connected devices are part of ecosystems connecting people, processes, data, and things which are communicating in the cloud using the increased storage and computing power and pushing for standardization of communication and metadata. In this context security, privacy, safety, trust have to be address by the product manufacturers through the life cycle of their products from design to the support processes. The IoT developments address the whole IoT spectrum - from devices at the edge to cloud and datacentres on the backend and everything in between, through ecosystems are created by industry, research and application stakeholders that enable real-world use cases to accelerate the Internet of Things and establish open interoperability standards and common architectures for IoT solutions. Enabling technologies such as nanoelectronics, sensors/actuators, cyber-physical systems, intelligent device management, smart gateways, telematics, smart network infrastructure, cloud computing and software technologies will create new products, new services, new interfaces by creating smart environments and smart spaces with applications ranging from Smart Cities, smart transport, buildings, energy, grid, to smart health and life. Technical topics discussed in the book include: • Introduction• Internet of Things Strategic Research and Innovation Agenda• Internet of Things in the industrial context: Time for deployment. • Integration of heterogeneous smart objects, applications and services• Evolution from device to semantic and business interoperability• Software define and virtualization of network resources• Innovation through interoperability and standardisation when everything is connected anytime at anyplace• Dynamic context-aware scalable and trust-based IoT Security, Privacy framework• Federated Cloud service management and the Internet of Things• Internet of Things Applications

GUIDELINES for Implementing Managed Lanes Nov 18 2022

Content Management Bible Dec 27 2020 Written by one of the leading experts in content managementsystems (CMS), this newly revised bestseller guides readers throughthe confusing-and often intimidating-task of building,implementing, running, and managing a CMS Updated to cover recent developments in online deliverysystems, as well as XML and related technologies Reflects valuable input from CMS users who attended theauthor's workshops, conferences, and courses An essential reference showing anyone involved in informationdelivery systems how to plan and implement a system that can handlelarge amounts of information and help achieve an organization'soverall goals

Exam Ref 70-413 Designing and Implementing a Server Infrastructure (MCSE) Nov 25 2020 Fully updated! Prepare for Microsoft Exam 70-413 - and help demonstrate your real-world mastery designing, and implementing Windows Server infrastructure in an enterprise environment. Designed for experienced IT professionals ready to advance their status, Exam Ref focuses on the critical-thinking and decision-making acumen needed for success at the MCSE level. Focus on the expertise measured by these objectives: Plan and deploy a server infrastructure Design and implement network infrastructure services Design and implement network access services Design and implement an Active Directory infrastructure (logical) Design and implement an Active Directory infrastructure (physical) This Microsoft Exam Ref: Is fully updated for Windows Server 2012 R2 Organizes its coverage by objectives for Exam 70-413 Features strategic, what-if scenarios to challenge candidates Designed for IT professionals responsible for designing, implementing, and maintaining a Windows Server 2012 infrastructure in an enterprise-scaled, highly virtualized environment.

ITS Oct 17 2022 This endeavor is a logical extension of Iowa's planning and deployment in the ITS arena. In 2001 Iowa DOT completed a project to produce a statewide ITS deployment plan. While the project has been technology-oriented, it also supports the broader objectives of the State of Iowa as well as the participating communities. Foremost among these objectives is to provide efficient and effective transit services that meet the needs of rural and small urban communities. The implementation of technology is, therefore, not for technology's sake; it is to improve transit services. ITS technology is a tool, and the project has defined a way of deploying these tools to serve transit agencies and transit users throughout the state. The Transit ITS Deployment Plan is an initial step in the overall ITS deployment process. Experience from around the country has shown that initial planning is critical, and is too often an activity that is not given adequate time or resource. Thus, the project approaches the task of ITS deployment in several steps or phases.

Value Realization from Efficient Software Deployment Dec 19 2022 Many companies have a complex process for purchasing software that is required by IT projects, or better, by the business. Usually software is purchased by a centralized procurement function, and is either purchased on a project-by-project basis or as a large periodic software contract. Unfortunately purchasing software products does not automatically mean that these products are exploited throughout the organization providing the maximum possible value to the business units. Several issues call for a structured approach that gets the most business value out of software already purchased. The objectives of this approach are to: Create maximum awareness throughout the organization of the software purchased. Track software use in IT projects and act if products are not used at all, used improperly, or insufficiently used. Facilitate use of software products in projects, especially when software products are complex and require a lot of integration. We can summarize the overall objective of this approach as ensuring that the business units in an organization obtain the maximum possible value of software products purchased, which is also the scope of this IBM® Redbooks® publication.

Using Liberty for DevOps, Continuous Delivery, and Deployment Sep 04 2021 This IBM® Redbooks® publication provides an example approach for an agile IT team to implement DevOps capabilities in their software delivery of a Java application. We introduce several tools that show how teams can achieve transparency, traceability, and automation in their application lifecycle to all of the stakeholders to deliver a high-quality application that meets its initial requirements. The application that is built highlights the composable and dynamic nature of the Liberty run time. The Liberty run time helps developers to get their applications up and running quickly by using only the programming model features that are required for their applications. The target audience for this book is IT developers, IT managers, IT architects, project managers, test managers, test developers, operations managers, and operations developers.

Corporate Master Plan for Research and Deployment of Technology & Innovation Jun 13 2022

The TEA-21 ITS Deployment Program: Interim Report 2000 Mar 10 2022

Windows Server™ 2003 Bible Feb 15 2020 If Windows Server 2003 can do it, you can do it, too... This comprehensive reference provides what you need to plan, install, configure, and maintain a Windows Server 2003 R2, SP1, operating system. Covering critical new SP1 security features, the new Windows Update service, and expanded Active Directory management tools, the latest edition of this guide is packed with information, including key changes that alter the way the powerful Windows Server 2003

operating system is installed, configured, and maintained. Improve security, extend your corporate network, optimize e-mail, chat, and other communications, and more - this book will show you how. Inside, you'll find complete coverage of Windows Server 2003 Plan your Windows Server 2003 R2, SP1, single-system or enterprise deployment Find out the best ways to secure the network, including encryption, secure sockets, Kerberos, and other certificates Protect your corporate network automatically with new Windows Update Service Extend the enterprise network to branch offices with enhanced Active Directory management tools Facilitate change control over users, computers, security, and the workspace, using Group Policy technology Develop an effective storage, backup, and disaster recovery strategy Implement scalable solutions that stay up and online day after day, and still handle disasters Explore thin-client deployment, set up Terminal Services, and configure application servers Stay on top of printer management, Internet printing, and troubleshooting Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

Department of Transportation's Intelligent Transportation Systems (ITS) Projects Book Dec 15 2019
Contains summaries of current U.S. intelligent transportation systems projects.

InfoWorld May 20 2020 InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects.

Deployment Jan 16 2020 Theory-based, practice-driven strategies for handling separation issues in military families by internationally renowned consultant/trainer.

IBM i2 Integrated Law Enforcement: Technical Architecture and Deployment Guide Jun 20 2020
IBM® i2® Integrated Law Enforcement is an IBM Smarter Cities® solution that addresses the needs of modern-day law enforcement agencies. It is a solution framework that provides the individual capabilities of the products that comprise the solution and extended capabilities developed through the synergistic integration of those product components. As a framework, IBM i2 Integrated Law Enforcement allows for the continuous expansion of capabilities by putting together building blocks within the system and integrating with new, external systems. In doing so, an organization can respond and adapt to its changing needs. Simply stated, the configuration, integration, and implementation of IBM i2 Integrated Law Enforcement and its components provide the tools for more effective law enforcement. This IBM Redpaper™ publication explains the technology and the architecture on which the solution is built. Most importantly, this paper enables technical teams to install, configure, and deploy an instance of the i2 Integrated Law Enforcement solution using the product i2 Intelligent Law Enforcement V1.0.1. This paper is targeted to solution architects, system and deployment engineers, security specialists, data management experts, system analysts, software developers and test engineers, and system administrators. Readers of this paper will benefit from the IBM Redguide™ publication "Integrated Law Enforcement: A Holistic Approach to Solving Crime", REDP-5116.
