House of Commons - Communities and Local Government Committee: Building Regulations Certification of Domestic Electrical Work - HC 906 Nov 27 2020 The Communities and Local Government Committee note that the quality of domestic electrical work has improved since some of it was brought within building control eight years ago. But much more needs to be done to protect people in their homes. The main mechanism for checking electrical work covered by Part P of the building regulations is satisfactory is certification by a qualified supervisor operating under a Government-approved competent persons scheme. As long as the qualified supervisor meets competence standards, the person carrying out the work does not necessarily have to be a qualified electrician. The report calls for competence requirements to be rolled out within five years for all those actually doing electrical work to which Part P applies. In the interim, it is recommended that there be a limit on the number of notifications that a single qualified supervisor can authorise in a year in order to ensure that they devote enough time to checking each job. The Government should aim to double public awareness of Part P within two years and aim for an awareness level similar to that of Gas Safe within five years (45%).

Additionally, the report calls for more proactive enforcement against those who breach Part P.

Professional Ethics in Construction and Engineering Nov 08 2021 Professional Ethics in Construction and Engineering A comprehensive and incisive how-to guide that walks readers through the implementation of robust ethical standards in everyday construction management and decision-making Recent and high-profile incidents—including the 2017 Grenfell Tower tragedy and the Lakanal House fire in 2009—have been attributed to failures in the building construction, design, and certification industries. Some commentators have suggested that, while professional construction organizations are bound by codes of ethics, such codes may be downplayed or sometimes even ignored in the day-to-day activities of construction professionals. Professional Ethics in Construction and Engineering is a practical and industry-aligned guide on ethical practice in construction management. The book addresses how existing ethical standards should be applied in daily practice and offers case studies and examples to illustrate their effective implementation. The author also provides a toolkit that can be employed by frontline managers facing common ethical dilemmas. Readers will find: Thorough discussions of how problematic and dangerous ethical situations arise and how they should be addressed In-depth explorations of conflicts between legal and moral expectations, as well as mismatches between clients' business goals and the duties of contracting organizations Playbooks for how impactful decisions should be made and how to uphold ethical standards and values Comprehensive review of existing ethical standards and the legal requirements binding construction professionals found in organizations like RICS, RIBA, and the CIOB A must-read document for construction management practitioners, Professional Ethics in Construction and Engineering will also be invaluable to construction clients, contractors, surveyors, and architects, as well as students of construction-related disciplines at undergraduate and postgraduate level.

The Electrician's Guide to the 17th Edition of the IET Wiring Regulations BS 7671:2008 incorporating Amendment 3:2015 and Part P of the Building Regulations Aug 05 2021 For more than 30 years, students and practising electricians have relied on John Whitfield to guide them through the complexities of the Wiring Regulations. As in earlier editions, all useful relevant details derived from other IET publications such as Guidance Notes, Wiring Matters, which might otherwise be overlooked by electricians, are included. Importantly the Guide also benefits from the most up-to-date, hands-on expertise provided by the co-author, Andrew Hay-Ellis, whose credentials are second-to-none. He is an established author of vocational electrical books and, amongst other functions, is a Chief Examiner at City & Guilds.
