Neurolaryngology brings together in one volume the latest concepts in this important and developing field. In order to make this text as useful as possible for clinicians, selected chapters on general concepts important to clinical care have been included, including chapters on history, physical examination, clinical voice laboratory assessment, common diagnoses and treatments, and other topics important to all voice patients, including those with neurolaryngological complaints. Starting with a perspective on modern voice medicine, including neurolaryngology and a brief historical overview of the development of laryngology, the text goes on to describe neuroanatomy and physiology, laryngeal function, and the role of chaos in voice disorders. It contains fascinating new ideas on applications of nonlinear dynamics to voice care and research, a topic of great relevance in neurolaryngology. Beginning the section on clinical assessment of voice disorders is a description of the current approach to history and physical examination recommended for patients with neurolaryngological voice disorders. The text contains the most current research and references throughout, presenting the latest information about many conditions, including some rarely covered in the laryngologic literature; it highlights diagnosis and treatment of a wide array of motor and sensory disorders that may impair voice. The interdisciplinary expertise of numerous authors has been invaluable in the preparation of this text; however, every effort has been made to maintain style and continuity throughout. Clinically relevant and thought provoking, Neurolaryngology is the definitive encyclopedic reference in this new subspecialty of laryngology. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. An economic and cultural revolution has shaken the photobook world in the last five years: self-publishing. An army of photographers operating as publishers have had an instrumental role in today's photobook renaissance. This book offers a do-it-yourself manual and a survey of key examples of self-published success stories, as well as a self-publishing manifesto and list of resources. The manual portion of this volume offers insight, advice, and rudimentary how-tos for the photographer interested in self-publishing. The survey offers an overview of the contemporary self-publishing landscape and includes a contribution by the Museum of Modern Art's art librarian and bibliographer David Senior, which grounds today's activities in a legacy of artists' books and collectives. The case studies themselves will each illustrate a particular theme and genre of self-publishing (such as diary, documentary, or conceptual object), and will be accompanied by personal testimonies from the artists who created them. Author Bruno Ceschel, founder of the Self Publish, Be Happy organization, provides a rallying cry for all those involved in the contemporary photobook revolution--a moment in which the photobook, in all its infinitesimal manifestations, has never before been so omnipresent in our cultural landscape, nor so critical to the photographer's practice. Self Publish, Be Happy, founded by Bruno Ceschel in 2010, collects, studies, and celebrates self-published photobooks through an ongoing program of workshops, live events, and on/ offline projects. Its London-based collection contains more than two thousand publications. Self Publish, Be Happy is the physical manifestation of a worldwide online community formed of a new, ever-evolving generation of young artists, who experiment, stretch, and play with the medium of photography.
