TuneCrack stands for: Crack the tuning problem - Learn to tune instruments precisely. The importance of tuning is often underestimated. However, tuning is a necessary step for every performance. TuneCrack has exercises to improve your listening skill and your pitch transfer skill. Your listening skill is trained with the Precision Listening Method. Your task is to solve ever more challenging questions: until a precision to the cent. Your

transfer skill is trained with the Pitch Keeper Method. First, the program introduces you to your personal Absolute Pitch Point. With appropriate exercises and feedback you learn how to take over a pitch and keep the sound in your mind for an ever-lengthier time period. Transferring a pitch and keeping it in your mind is an important step in understanding the musical center of a piece. Since humans can only express pitch by singing, the program listens to you and gives you feedback based on your singing: a colored pitch line shows, if you are too low, too high or on target. The program tracks your progress and lets you see the statistics in graphical form. Thus, your weak and strong points get visible. Eliminate weak points by training. Build upon and extend your strong points. With your strong points start building an absolute pitch repertoire. This manual details the preparation of data for and the interpretation of output from the least squares computer program LSTSQR-1. The material presented here will be somewhat difficult for the non-computer oriented professional to interpret on the first reading. However, the professional researcher should find after an initial reading, some consultation with the data processing staff, and a little practice that he can easily design, prepare, and interpret his own data analyses. LSTSQR-1 performs least squares curve fitting of data pairs under a wide variety of I/O and processing options. LSTSQR-1 accepts any number of consecutive data sets and any number of data points per data set. Data may come from any of six input files and may be read under any format specifying one data pair per record. The independent and dependent variables of the regression may be assigned and generated interchangeably and independently using a set of nine transformation functions each available in nineteen powers ranging from -9 to +9. Also the independent and dependent variable titles and the regression title may be supplied by the user. All regressions are polynomials in the independent variable of degree 1 through 9 with or without a constant term. Finally, the extent of output is under user control.
