East European Cars Dec 27 2020 East European cars are generally derided in the West as cheap, low-quality rustbuckets. This title aims to dig deeper, covering almost all the vehicles produced from the end of the Second World War to the end of the 20th century from the most basic three-wheeler from Czechoslovakia to the big V8 limousines of Russia and China. Many Soviet bloc cars were never exported to the West so there are many unfamiliar marques such as the Zil, Chaika, Syrena and Tatra. These are covered along with the better known Skoda, Lada and Trabant, including Soviet land-speed records and prototypes.

Slut! Jun 20 2020 Girls may be called "sluts" for any number of reasons, including being outsiders, early developers, victims of rape, targets of others' revenge. Often the labels has nothing to do with sex -- the girls simply do not fit in. An important account of the lives of these young women, Slut! weaves together powerful oral histories of girls and women who finally overcame their

sexual labels with a cogent analysis of the underlying problem of sexual stereotyping. Author Leora Tanenbaum herself was labeled a slut in high school. The confessional article she wrote for Seventeen about the experience caused a sensation and led her to write this book.

Cars of the Soviet Union Nov 25 2020 The story of the Soviet Union's cars has to be seen in the context of a planned society in which everything was planned well in advance, and consumer items were not a priority until well after the Second World War. This extraordinarily detailed study charts the history of Soviet cars from the birth of the Soviet Union in 1917 until its demise in 1990, with a conclusion about the post-Soviet era. It is the story of an insular, state-run car industry in which the carefully thought-out ideas of ministerial planners, rather than fickle customers in a free market, determined what cars were made in a country where the open road was often a 300-mile track across a windswept steppe.

A Short History of the Motorcycle Mar 18 2020 It's cold, wet and dangerous, so why do we do it? Richard Hammond's A SHORT HISTORY OF THE MOTORCYCLE attempts to explain what it is about bikes and biking that calls to some people, leaving them powerless to resist. This entertaining guide charts the history of the bike from its origins as a cheap and modest means of transport for the masses to its modern incarnations: a terrifying symbol of rebellion and menace, a high-tech racing machine and the rich kid's plaything. We look at the bikes that have propelled people across the world to work, to school and to their doom. As for the bikers ... Edwardian ladies did it, though not in large numbers. Young bucks desperate to prove their manhood did it, because it was the cheapest speed available. Hammond examines bikers of every type, from the happy farmer trundling through fields on their Honda Cub to the Hell's Angel terrorising Californian towns on their hog. Wittily written and lavishly illustrated, A SHORT HISTORY OF THE MOTORCYCLE is a thrilling ride for bikers and non-bikers alike.

Bulk Material Handling Jan 16 2020 Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as: • physical principles of various material handling systems; • considerations in selecting technically efficient and environmentally friendly equipment; • best practices in upgrading and optimizing existing bulk material handling facilities; • strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.
