Chris Sangster's book is a practical, step-by-step guide to personal and professional development that covers the strategy, techniques and philosophy behind the process. Lifelong learning, the shift from trainer-centred delivery to learner-centred development and the opportunities provided by new technologies, place considerable onus on individuals to take responsibility for their own learning. This guide will help trainers and facilitators to enable learners to do just that. There are, at least, three different participants involved in any meaningful and sustainable process of personal development at work - the learner, his or her line manager and mentor(s), and the training (or development support) function. Chris Sangster provides a route map for each of these three roles. He offers a simple, compelling triangular model to illustrate the interaction of each and places particular emphasis on 'learning outcomes' - as opposed to inputs, focusing attention and objective measurement on learning that manifests itself through application, achievement and changes in behaviour. Whether you are looking for a complete and holistic process for developing your people or a highly readable guide to unravelling the myths of development - such as the confusion between personal and professional development - this book has it all. What are the grounds for the distinction between the mental and the physical? What is it the relation between ascribing mental states to an organism and understanding its behavior? Are animals and complex systems vehicles of inner evolutionary environments? Is there a difference between personal and sub-personal level processes in the brain? Answers to these and other questions were developed in Daniel Dennett's first book, Content and Consciousness (1969), where he sketched a unified theoretical framework for views that are now considered foundational in cognitive science and philosophy of mind. Content and Consciousness Revisited is devoted to reconsider the ideas and ideals introduced in Dennett's seminal book, by covering its fundamental concepts, hypotheses and approaches and taking into account the findings and progress which have taken place during more than four decades. This book includes original and critical contributions about the relations between science and philosophy, the personal/sub-personal level distinction, intelligence, learning, intentionality, rationality, propositional attitudes, among other issues of scientific and philosophical interest. Each chapter embraces an updated approach to several disciplines, like cognitive science, cognitive psychology, philosophy of mind and cognitive psychiatry. The book shares the political views of the European government. The author mainly states the view of the Right. He believes that the traditional European left is collapsing. It is certainly the case that membership of New Right parties, such as the Swedish Democratic Party, is on the rise. He also argues that the Internet is the demise of the traditional centers of free power, the press. This book is for those who feel that they are drowning in the lies of the left. Through the book, you will gain a better understanding of politics and inspire positive action. Containing cases adjudged in the Superior Court of Pennsylvania. This book will help readers understand the most important book of Michael Polanyi, 'Personal Knowledge', and help them grasp the essence of his philosophical thinking. In this volume, Polanyi's goals are first reconstructed, and then his main philosophical arguments are introduced. The discussion is limited to the most crucial ideas that are indispensable for the arc of his book: tacit knowledge, emergence and the fiduciary program. The thirteen chapters of this volume explain the essence of the thirteen chapters of 'Personal Knowledge'. The page numbers in this book work just as well with the 2015 'Enlarged Edition' of 'Personal Knowledge' as with the original issues. Whether you just want to get the key quotation and the context right on tacit knowledge, emergence or the fiduciary program, or want to have a deep dive for your scholarly research in philosophy and management, this book is for you. A title in the modular "Principles of Psychology" series, designed for A-level and other introductory courses. While normal individuals obviously differ from each other in various ways, psychologists have emphasized differences in intelligence and personality. This emphasis is reflected in the book, and various different views are discussed at length.; Abnormality has always been a source of fascination, although it has been difficult to form a good understanding of why and how abnormality develops. Psychologists have also grappled with other complex issues, such as how to classify abnormal individuals and what forms of treatment will prove beneficial. In spite of complexities, much progress has been made. This book gives an insight into virtual as well as multimedia possibilities for professional applications, scientifically based concepts, competence development and ethical guidelines. Case studies are used to illustrate the multimedia-based, virtual implementation of systemic solution-oriented support processes. The interweaving of virtual coaching with training modules takes into account the latest trends in continuing education. For this, provider platforms and tools must meet certain requirements to ensure safety and professionalism. In 1997, the U.S. Environmental Protection Agency (EPA) established regulatory standards to address health risks posed by inhaling tiny particles from smoke, vehicle exhaust, and other sources. At the same time, Congress and the EPA began a multimillion dollar research effort to better understand the sources of these airborne particles, the levels of exposure to people, and the ways that these particles cause disease. To provide independent guidance to the EPA, Congress asked the National Research Council to study the relevant issues. The result was a series of four reports on the particulate-matter research program. The first two books offered a conceptual framework for a national research program, identified the 10 most critical research needs, and described the recommended timing and estimated costs of such research. The third volume began the task of assessing initial progress made in implementing the research program. This, the fourth and final volume, gauged research progress made over a 5-year period on each of the 10 research topics. The National Research Council concludes that particulate matter research has led to a better understanding of the health effects caused by tiny airborne particles. However, the EPA, in concert with other agencies, should continue research to reduce further uncertainties and inform long-term decisions. The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics. This book offers ethical and political approaches to issues that nonhuman animals face. The recent 'political turn' in interspecies ethics, from ethical to political approaches, has arisen due to the apparent lack of success of the nonhuman animal movement and dissatisfaction with traditional approaches. Current works largely present general positions rather than address specific issues and principally rely on mainstream approaches. This book offers alternative positions such as cosmopolitan, libertarian, and left humanist thought, as well as applying ethical and political thought to specific issues, such as experimentation, factory farming, nonhuman political agency, and intervention. Presenting work by theorists and activists, insights are offered from both ethics and politics that impact theory and practice and offer essential considerations for those engaging in interspecies ethics within the political turn era. Learning through practice lies at the heart of social work education, providing the opportunity for students to develop and employ the skills, experience and knowledge they need to become effective social workers. This exciting new addition to Palgrave's Practical Social Work series provides an integrated and user-friendly approach to practice learning by putting placements within a broader learning framework. Rather than treating placements as an isolated aspect of the social work degree, Practice Learning in Social Work shows how they are relevant to all aspects of the social work experience. Divided in to three parts, this book's pragmatic approach mirrors students' own journey as they progress from preparation for practice, through to actual experience, and then beyond this to support personal and professional development right up to qualification as a Newly Qualified Social Worker. With a strong emphasis on service users and carers as central stake holders, Practice Learning in Social Work illustrates the practical nature of the profession with realistic case scenarios based on real life learning experiences, reflective learning exercises and practice led research references throughout. Progress checklists, linked to the Professional Capabilities Framework, also provide readers with the opportunity to assess their own strengths and learning needs. The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics. Mind and Its World I begins a detailed analysis of the subjective side of experience. It examines mind and how it perceives its world in valid and invalid ways based on the Classifications of Mind, which provides divisions and definitions of the types of mind identified in the epistemological tradition of Dignaga and Dharmakirti. The key point is the discernment of the aspects of mind that validly perceive things the way they are, which are distinguished from those aspects of mind that are mistaken and tainted by fundamental delusion, and thus keep one bound in samsara. It also introduces the two Hinayana philosophical systems, the Vaibhashika and Sautrantika schools, covering the two truths and the process of perception. Selected readings, analytical meditations, study questions, review summaries are included in the sourcebook. La 4e de couverture indique : "For the Apostle Paul, humans do not identify and act on their own but are constituted, in part, by relationships. Samuel D. Ferguson shows that, according to Paul, the work of the Holy Spirit further attests to this, as Christians realize their new life through Spirit-created relationships of sonship and communal interdependence"
