To date, there are 300 disorders associated with voice, but until now there has never been a published reference manual that classifies these disorders. Borrowing from the successful organization schema of the American Psychiatric Association's Diagnostic Statistical Manual (DSM), the *Classification Manual for Voice Disorders-I* provides the framework for classifying voice disorders using the following criteria for each disorder: essential and associated features; vocal impairment; clinical history and demographic profile; course and complications; medical and voice differential diagnosis; and severity criteria. *Classification Manual for Voice Disorders-I* is a project of ASHA's Special Interest Division 3, Voice and Voice Disorders (DIV 3), originally directed by contributing authors Moya Andrews, Diane Bless, Daniel Boone, Janina Casper, Leslie Glaze, Mike Karnell, Christy Ludlow, and Joe Stemple. The text was edited over a period of several years by the authoritative group of voice disorders professionals, including Katherine Verdolini, Clark Rosen, and Ryan Branski. This version represents the fields of speech-language pathology, voice science, and otolaryngology. *CMVD-I* lists most conditions that may negatively affect the ability to produce voice, based on the most current knowledge. These conditions comprise 30 structural pathologies, 25 neurological disorders, 20 aerodigestive conditions, 13 psychological disturbances, 15 systemic diseases, four inflammatory processes, four traumatic conditions, and five miscellaneous voice disorders. *CMVD-I* is a must-have resource for professionals who specialize in voice disorders, especially speech-language pathologists and otolaryngologists. The handy organization of this reference makes it a convenient and accessible resource for voice coaches and teachers of singing. It will also be invaluable as a textbook in master's-level communication sciences programs throughout the world. Proceeds received by Division 3 will be used to support the mission of Special Interest Division 3, which provides continuing education and networking opportunities to promote leadership and advocacy for voice issues from professional, clinical, educational, and scientific perspectives. Each of the rudimental systems on the Grand Tour is broken down with a short history, an explanation of the notation styles and rhythmic quirks, a region-specific rudiment list with rhythmic interpretation, musical excerpts for context, an online recorded example, and a list of sources for further study. All twenty-two of the regions have contributed to the current state of the percussive arts and studying their rudimental drumming can help achieve higher levels of control, finesse, flexibility, creativity, and pure chops. Rudimental Grand Tour incorporates over 600 years of history and hundreds of unique rudiments that are not found on the Percussive Arts Society (PAS) 40 list. American fife and drum, Basler trommeln, Scottish pipe band, Mexican banda de guerra, Norwegian trommeslåtter, Swiss tambour-ordonnanz and sixteen more cultures are represented—both well-known and obscure. Whether you are a marching specialist, kit drummer, world percussionist, or classical artist, a world of rudimental possibility awaits. Using a corpus of 50 films, ranging from John Ford's The Informer (1935) to Lenny Abrahamson's Garage (2007), the author examines the extent to which Irish English grammatical, discourse and lexical features are present in the films and provides a qualitative analysis of the accents in these works. The authenticity of the language is called into question and discussed in relation to the phenomenon of the Stage Irishman. Robust recognition and understanding of spontaneous speech in varied environments, good comprehensibility and naturalness of expressive speech synthesis are goals that cannot be achieved without a change of paradigm. This book argues for interdisciplinary communication and cooperation in problem-solving in general, and discusses the interaction between speech and language engineering and phonetics in particular. With a number of reports on innovative speech technology research as well as more theoretical discussions, it addresses the practical, scientific and sometimes the philosophical problems that stand in the way of cross-disciplinary collaboration and illuminates some of the many possible ways forward. What is involved in acquiring a new dialect - for example, when Canadian English speakers move to Australia or African American English-speaking children go to school? How is such learning different from second language acquisition (SLA), and why is it in some ways more difficult? These are some of the questions Jeff Siegel examines in this book, which focuses specifically on second dialect acquisition (SDA). Siegel surveys a wide range of studies that throw light on SDA. These concern dialects of English as well as those of other languages, including Dutch, German, Greek, Norwegian, Portuguese and Spanish. He also describes the individual and linguistic factors that affect SDA, such as age, social identity and language complexity. The book discusses problems faced by students who have to acquire the standard dialect without any special teaching, and presents some educational approaches that have been successful in promoting SDA in the classroom.

This volume provides new insights into various issues on prosody in contact situations, contact referring here to the L2 acquisition process as well as to situations where two language systems may co-exist. A wide array of phenomena are dealt with (prosodic description of linguistic systems in contact situations, analysis of prosodic changes, language development processes, etc.), and the results obtained may give an indication of what is more or less stable in phonological and prosodic systems. In addition, the selected papers clearly show how languages may have influenced or may have been influenced by other language varieties (in multilingual situations where different languages are in constant contact with one another, but also in the process of L2 acquisition). Unlike previous volumes on related topics, which focus in general either on L2 acquisition or on the description and analyses of different varieties of a given language, this volume considers both topics in parallel, allowing comparison and discussion of the results, which may shed new light on more far-reaching theoretical questions such as the role of markedness in prosody and the causes of prosodic changes.
