The Landscape Photographer's Guide to Photoshop Nov 16 2022 The first step to creating a successful photograph happens before you even click the shutter: the act of visualizing the final result—viewing the landscape in front of you and seeing, in your mind’s eye, the final image that you want to create—is the true first act of the creative process. Once you know the end result you want to achieve, connecting the dots from capture through post-processing in Adobe Camera Raw and Photoshop becomes an intentional and logical act. Instead of randomly (and desperately) pushing and pulling sliders in Photoshop with the hope that your image will look “better,” you execute a logical series of steps that closes the gap between the initial capture and your earlier visualization. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px 'Avenir Next'} p.p2 {margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px 'Avenir Next'; min-height: 16.0px} p.p3 {margin: 0.0px 0.0px 0.0px 0.0px; font: 11.0px Symbol; min-height: 11.0px} span.s1 {font: 11.0px Symbol} span.Apple-tab-span {white-space:pre} In *The Landscape Photographer's Guide to Photoshop: A Visualization-Driven Workflow*, photographer, author, and educator Guy Tal provides you with a roadmap to help you learn to implement such a visualization-driven approach in your landscape photography. Image Blending Techniques and their Application in Underwater Mosaicing Jan 06 2022 This work proposes strategies and solutions to tackle the problem of building photo-mosaics of very large underwater optical surveys, presenting contributions to the image preprocessing, enhancing and blending steps, and resulting in an improved visual quality of the final photo-mosaic. The text opens with a comprehensive review of mosaicing and blending techniques, before proposing an approach for large scale underwater image mosaicing and blending. In the image preprocessing step, a depth dependent illumination compensation function is used to solve the non-uniform illumination appearance due to light attenuation. For image enhancement, the image contrast variability due to different acquisition altitudes is compensated using an adaptive contrast enhancement based on an image quality reference selected through a total variation criterion. In the blending step, a graph-cut strategy operating in the image gradient domain over the overlapping regions is suggested. Next, an out-of-core blending strategy for very large scale photo-mosaics is presented and tested on real data. Finally, the performance of the approach is evaluated and compared with other approaches.
