[Bicycle Design](#) Jun 14 2022 An authoritative and comprehensive account of the bicycle's two-hundred-year evolution. The bicycle ranks as one of the most enduring, most widely used vehicles in the world, with more than a billion produced during almost two hundred years of cycling history. This book offers an authoritative and comprehensive account of the bicycle's technical and historical evolution, from the earliest velocipedes (invented to fill the need for horseless transport during a shortage of oats) to modern racing bikes, mountain bikes, and recumbents. It traces the bicycle's development in terms of materials, ergonomics, and vehicle physics, as carried out by inventors, entrepreneurs, and manufacturers. Written by two leading bicycle historians and generously illustrated with historic drawings, designs, and photographs, Bicycle Design describes the key stages in the evolution of the bicycle, beginning with the counterintuitive idea of balancing on two wheels in line, through the development of tension-spoked wheels, indirect drives (employing levers, pulleys, chains, and chainwheels), and pneumatic tires. The authors examine the further development of the bicycle for such specific purposes as racing, portability, and all-terrain use; and they describe the evolution of bicycle components including seats, transmission, brakes, lights (at first candle-based), and carriers (racks, panniers, saddlebags, child

seats, and sidecars). They consider not only commercially successful designs but also commercial failures that pointed the way to future technological developments. And they debunk some myths about bicycles—for example, the mistaken but often-cited idea that Leonardo sketched a chain-drive bike in his notebooks. Despite the bicycle's long history and mass appeal, its technological history has been neglected. This volume, with its engaging and wide-ranging coverage, fills that gap. It will be the starting point for all future histories of the bicycle.

Raising Cubby Mar 31 2021 The slyly funny, sweetly moving memoir of an unconventional dad's relationship with his equally offbeat son—complete with fast cars, tall tales, homemade explosives, and a whole lot of fun and trouble John Robison was not your typical dad. Diagnosed with Asperger's syndrome at the age of forty, he approached fatherhood as a series of logic puzzles and practical jokes. Instead of a speech about the birds and the bees, he told his son, Cubby, that he'd bought him at the Kid Store—and that the salesman had cheated him by promising Cubby would "do all chores." While other parents played catch with their kids, John taught Cubby to drive the family's antique Rolls-Royce. Still, Cubby seemed to be turning out pretty well, at least until school authorities decided that he was dumb and stubborn—the very same thing John had been told as a child. Did Cubby have Asperger's too? The answer was unclear. One thing was clear, though: By the time he turned seventeen, Cubby had become a brilliant and curious chemist—smart enough to make military-grade explosives and bring federal agents calling. With Cubby facing a felony trial—and up to sixty years in prison—both father and son were forced to take stock of their lives, finally accepting that being "on the spectrum" is both a challenge and a unique gift.
