Health Care in the Next Curve Nov 09 2021
Healthcare in the U.S. is a critical juncture. We face a sharp upward rise in the number of people with chronic diseases and disabilities. As demands on our current health system grow, so will costs. But as a society we are approaching the upper limit of how much we are willing (or able) to spend on health care. Health care policy makers know this. That is why major health reform measures are focused on population health and value-based care. These are the so-called second curve objectives. But these initiatives are doomed to failure. We are asking a system to do things that it was not designed to do. In fact, we don't have a health care "system" as such. We have a parts bin of disconnected silos. Fragmented delivery systems. Specialized

caregivers. Professional groups. Trade associations. All with distinct cultures. Each with their own motivations and agendas. Our payer and regulatory structures have evolved over the decades in response to political and policy initiatives. However well intentioned (or not), these structures defy logic. They reward and reinforce counter-productive industry behaviors. They pose formidable roadblocks to achieving needed changes. Current reform initiatives are an implicit recognition that our health model is flawed. The attitude seems to be, "Yes, we know the overall health system is a problem, but we can make failure less severe if we implement these measures." We are at a critical juncture. We can continue to place additional demands on an industry model that has outlived its functional utility. Or we can take more of a clean slate approach and move toward a model that is in keeping with today's needs. The outlook is not good if we stay on the current curve. The demands on resources will continue their upward trajectory. The default scenario will be one of rationing and less to invest in new cures and new technologies. The good news is that we are within sight of a future state of health care that can really work. In this future state, we have gotten rid of the artificial barriers to effective and efficient patient care. Physicians and other health professionals work in a coordinated, interdisciplinary fashion. They have accountability for the whole care cycle. Caregivers have both

the flexibility and encouragement to innovate and come up with optimal delivery approaches. And because they are in a risk-reward relationship with payers, they have the incentives to provide true value. Patients feel intimately connected to a system that is focused on their specific needs. The key to this future state is good old-fashioned market discipline. Other delivery models must either improve or get out of the way. The market will demand cost-efficiencies and won't tolerate waste. Much of our regulatory structure will be rendered unnecessary. There will be no rewards for poor performance. This book takes a unique macro-level perspective of clinical, economic, and regulatory problems and possible solutions. It takes an objective and something scathing look at current industry structure: a silo-driven culture and entrenchment that is driven by self-interest; as well as the complicity of government in preserving the status quo through regulations, licensure, payment systems, etc.

The Leadership Gene Apr 02 2021 Within every human being, there is a powerful force that lies dormant until it is brought out by something or someone. I call this force the leadership gene. Every human being has a primal instinct to survive and flourish from the moment they are born until the moment they choose to do something or not with that instinct. **REVIEWS FOR THE LEADERSHIP GENE:** "What a superbly distinguishing contribution this volume is to the literature on

leadership! The book *The Leadership Gene* by John DiCicco is a modern-day classic of extraordinary quality and validity. The content and style of the book is on the cutting edge of leadership development, both in theory and practice. "I enthusiastically recommend this book for in service and preservice leadership training programs. Leaders in corporate and public service organizations, as well as universities would find this book to be a most valuable and significant tool at all levels of the leadership training spectrum. It is a powerful book indeed!" –Robert L. Heichberger, PhD, award-winning author, distinguished professor-director emeritus of leadership, SUNY Fredonia and Capella University

"Some say leadership cannot be learned. John DiCicco's approach in this wonderful new book suggests we can all be better people first and ultimately achieve leadership success. He presents a winning formula for people in all walks of life." –Jordan Rich, Chart Productions, Inc. WBZ Radio

"I enjoy the story telling style the author uses to help us all find our own Leadership Gene. It makes it easy for me to understand the message which is we all have leadership capability. It may be seen by others around us first, but in order for us to find our own, we must be willing to make changes, accept and understand them. This book will help you do that. Happy reading." –Patricia M. Comeau, Human Resources Reebok International Ltd.

"In my profession it is important to be disciplined,

dedicated to your craft and most of all goal oriented. At the end of each chapter John presents us with leadership lessons designed to help us continuously develop ways to improve our leadership skills. His book over and over again emphasizes the fact that leaders never stop learning and there is always room to grow."

—Peter Rappoli, MS, CCS, CSCS, Owner of Elite Health and Fitness Center "The ilk of a true leader denotes that he/she is strong, determined and humble; always willing to learn from all sources. As well, a leader at times must have the ability to show empathy, sympathy, care and respect. That being said, I appreciate professor DiCicco's visionary work as it provides knowledge and brilliant insight on developing the leader within you." —William G. Gross, Boston Police Superintendent-in-Chief

How Healthcare Data Privacy Is Almost Dead ... and What Can Be Done to Revive It! Sep 26 2020
The healthcare industry is under privacy attack. The book discusses the issues from the healthcare organization and individual perspectives. Someone hacking into a medical device and changing it is life-threatening. Personal information is available on the black market. And there are increased medical costs, erroneous medical record data that could lead to wrong diagnoses, insurance companies or the government data-mining healthcare information to formulate a medical 'FICO' score that could lead to increased insurance costs or restrictions of insurance.

Experts discuss these issues and provide solutions and recommendations so that we can change course before a Healthcare Armageddon occurs.

Intelligent Multimedia Analysis for Security Applications Feb 18 2020 The advances in the generation and processing of multimedia data (e. g. documents, images, video, audio, animations, etc.) have had an immense impact on multimedia applications and, as a result, multimedia has permeated almost every aspect of our daily lives. This development has also brought with it a whole

host of issues and challenges which were either not as apparent before or were non-existent. Today, digital media is relied upon as primary news and information resource, as evidence in a court of law, as part of medical records or as financial documents. However, there is still lack of authoritative mechanisms to verify the origin and veracity of media data. Indeed, multimedia content has become an extremely valuable asset, and it is being both disseminated and consumed on a larger scale than ever before, but the issues concerning how the content owners and publishers should control the distribution of and access to their content have not been satisfactorily resolved yet. There are various other issues related to use of multimedia that require further analysis and research. For example, it is a known fact that some criminal organizations communicate with its members by posting information embedded media to public forums and web-sites to evade surveillance by law enforcement. Conventional multimedia processing approaches do not provide sufficiently effective means for defending against such communication.
