The private business sector suffered both directly and indirectly from the terrorist strikes of September 11th. Many business workers perished in the New York World Trade Center, and the insurance, transport, and tourism industries were hard hit by the aftermath. Restrictions imposed in the name of security made business travel and the movement of goods more complicated. The private sector was called upon to support the fight against terrorism actively with tougher controls on money transfers and on the export of dangerous materials and technologies. These events offered a striking case of the growing interdependence of the private and public sectors in tackling present-day security challenges. The impact of the private sector, for good or ill, in areas of conflict has long been recognized. Private business is at the centre of the latest concerns over the vulnerability of crucial infrastructures, including energy supply. Systematic public-private sector consultation and partnership are needed to tackle these problems, but neither the principles nor comprehensive mechanisms for such cooperation have yet been identified. This book brings together reflections on general and specific aspects of public-private sector interaction, from a variety of experts in business, government, international organizations and the academic world. For completeness and balance, it also inquires into the costs of security and includes perspectives from Africa and the Arab World. It offers new reference material to help in the further exploration of this important subject. It covers the tension between the rich and poor in less developed countries as well as within richer countries in the process of globalisation. The main topics are the scope of disparities between the rich and poor, people's perception of wealth and poverty, and the concomitants of inequality which shape this relationship and influence its socio-economic consequences. In the tradition of social reporting, the book brings together authors from 15 countries, documenting a broad range of the international inequality debate. The results are related to the trends of socio-economic development, to statistical problems of measuring inequality, and to socio-political problems of integrating society in the

facing the challenge of dividing forces. The book is of interest for everybody who wants to understand the tensions of modern world. This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation. For most people, gender identity is pretty straightforward. We are identified as a boy or a girl at birth and don't give it a second thought. For others, however, the gender they were born into is not the gender they feel is their true identity. Whether you know someone who is questioning their gender or simply want to understand more about how to engage in this current dialogue, *When Gender is In Question* is a valuable guide to understanding. The book offers insights to many questions about gender: - What is the difference between being gay and being trans? - What are the current issues facing trans and gender diverse people? - What words and phrases are valuable to know? - What is the medical research on gender?... This provocative book undertakes a new and challenging reading of recent semiotic and structuralist theory, arguing that films, novels, and poems cannot be studied in isolation from their viewers and readers. This work provides a thought-provoking account of how medical treatments can be tested with unbiased or 'fair' trials and explains how patients can work with doctors to achieve this vital goal. It spans the gamut of therapy from mastectomy to thalidomide and explores a vast range of case studies. Why do critics feel impelled to unmask and demystify the works that they read? What is the rationale for their conviction that language is always withholding some important truth, that the critic's task is to unearth what is unsaid, naturalized, or repressed? These are the features of critique, a mode of thought that thoroughly dominates academic criticism. In this book, Rita Felski brilliantly exposes critique's more troubling qualities and proposes alternatives to it. Critique, she argues, is not just a method but also a sensibility--one best captured by Paul Ricoeur's phrase "the hermeneutics of suspicion." As the characteristic affect of critique, suspicion, Felski shows, helps us understand critique's seductions and limitations. The questions that Felski poses about critique have implications well beyond intramural debates among literary scholars. Literary studies, says Felski, is facing a legitimation crisis thanks to a sadly depleted language of value that leaves the field struggling to find reasons why students should care about Beowulf or Baudelaire. Why is literature worth bothering with? For Felski, the tendencies to make literary texts the object of suspicious reading or, conversely, impute to them qualities of critique, forecloses too many other possibilities. Felski offers an alternative model that she calls "postcritical reading." Rather than looking behind the text for its hidden causes, conditions, and motives, she suggests that literary scholars place themselves in front of a text, reflecting on what it calls forth and makes possible. Here Felski enlists the work of Bruno Latour to rethink reading as a co-production between actors, rather than an unraveling of manifest meaning, a form of making rather than unmaking. As a scholar with an abiding respect for theory who has long deployed elements of critique in her own work, Felski is able to provide an insider's account of critique's limits and alternatives that will resonate widely in the humanities. It is often presumed that biblical redaction was invariably done using scribal methods, meaning that when editors sought to modify or compile existing texts, they would do so in the process of rewriting them upon new scrolls. There is, however, substantial evidence pointing to an alternative scenario: Various sections of the Hebrew Bible appear to have been created through a process of material redaction. In some cases, ancient editors simply appended new sheets to existing scrolls. Other times, they literally cut and pasted their sources, carving out patches of text from multiple manuscripts and then gluing them together like a collage. Idan Dershowitz shows how this surprising technique left behind telltale traces in the biblical text - especially when the editors made mistakes - allowing us to reconstruct their modus operandi. Material evidence from the ancient Near East and elsewhere further supports his hypothesis. The attacks of September 11, 2001, changed the way the world looks at Islam. Throughout the mining and processing of minerals, the mined ore undergoes a number of crushing, grinding, cleaning, drying, and product sizing operations as it is processed into a marketable commodity. These operations are highly mechanized, and both individually and collectively these processes can generate large amounts of dust. If control technologies are inadequate, hazardous levels of respirable dust may be liberated into the work environment, potentially exposing workers. Accordingly, federal regulations are in place to limit the respirable dust exposure of mine workers. Engineering controls are implemented in mining operations in an effort to reduce dust generation and limit worker exposure. The classic work on the music of Afrofuturism, from jazz to jungle *More Brilliant than the Sun: Adventures in Sonic Fiction* is one of the most extraordinary books on music ever written. Part manifesto for a militant posthumanism, part journey through the unacknowledged traditions of diasporic science fiction, this book finds the future shock in Afrofuturist sounds from jazz, dub and techno to funk, hip hop and jungle. By exploring the music of such musical luminaries as Sun Ra, Alice Coltrane, Lee Perry, Dr Octagon, Parliament and Underground Resistance, theorist and artist Kodwo Eshun mobilises their concepts in order to open the possibilities of sonic fiction: the hitherto unexplored intersections between science fiction and organised sound. Situated between electronic music history, media theory, science fiction and Afrodiasporic studies, *More Brilliant than the Sun* is one of the key works to stake a claim for the generative possibilities of Afrofuturism. Much referenced since its original publication in 1998, but long unavailable, this new edition includes an introduction by Kodwo Eshun as well as texts by filmmaker John Akomfrah and producer Steve Goodman aka kode9.
