"Describ[es] the Type VII and its place in the history of warfare . . . probably the finest book on German submarines of WWII available in print."—Firetrench First conceived in the mid-1930s, the Type VII was still in production in the closing stages of the Second World War a decade later. Subject to continuous improvement through six major variants and with around 650 completed, it was built in larger numbers than any other submarine design in history. It formed the backbone of the Kriegsmarine's campaign against merchant shipping for the whole of the war, and in terms of tonnage sunk was by far the most successful U-boat type. This encyclopedic work combines a technical description of the type in all its variations with a history of its development and an overview of its most significant operations—especially those convoy battles that were to have a crucial impact on the evolution of the design and its equipment. A particular attraction of the book is the comprehensive visual coverage—photographs of virtually every aspect of design, construction, fittings and shipboard life; highly detailed general arrangement plans and close-up scale drawings; and, with modelmakers in mind, a stunning collection of full-color three-dimensional illustrations of every external feature and variant of the boats. There have been many books on U-boats reflecting an enduring public interest so any new offering has to be special. With its unique concentration of information and illustrative reference, Type VII is unrivalled.
