Watch a video introduction here. Statistics Through Applications (STA) is the only text written specifically for high school statistics course. Designed to be read, the book takes a data analysis approach that emphasizes conceptual understanding over computation, while recognizing that some computation is necessary. The focus is on the statistical thinking behind data gathering and interpretation. The high school statistics course is often the first applied math course students take. STA engages students in learning how statisticians contribute to our understanding of the world and helps students to become more discerning consumers of the statistics they encounter in ads, economic reports, political campaigns, and elsewhere. New and improved! STA 2e features expanded coverage of probability, a reorganized presentation of data analysis, a new color design and much more. Please see the posted sample chapter or request a copy today to see for yourself. A GCSE course created in consultation with schools. Textbooks and an integrated revision programme cover all UK boards syllabuses at three tiers. Extends the benefits and teaching style of Key Maths to GCSE. Plesha, Gray, and Costanzo's Engineering Mechanics: Statics & Dynamics presents the fundamental concepts clearly, in a modern context using applications and pedagogical devices that connect with today's students. The text features a problem-solving methodology that is consistently used throughout all example problems. This methodology helps students lay out the steps necessary to correct problem-formulation and explains the steps needed to arrive at correct and realistic solutions. Once students have fully mastered the basic concepts, they are taught appropriate use of modern computational tools where applicable. Further reinforcing the text's modern emphasis, the authors have brought engineering design considerations into selected problems where appropriate. This sensitizes students to the fact that engineering problems do not have a single answer and many different routes lead to a correct solution. The first new mainstream text in engineering mechanics in nearly twenty years, Plesha, Gray, and Costanzo's Engineering Mechanics: Statics and Dynamics will help your students learn this important material efficiently and effectively. Developed for the AQA Specification, revised for the new National Curriculum and the new GCSE specifications. The Teacher File contains detailed support and guidance on advanced planning, points of emphasis, key words, notes for the non-specialist, useful supplementary ideas and homework sheets. Discusses how to get to the root of eating habits, and offers advice on improving body image, dealing with emotional eating, and exercise. Planned, developed and written by practising classroom teachers with a wide variety of experience in schools, this maths course has been designed to be enjoyable and motivating for pupils and teachers. The course is open and accessible to pupils of all abilities and backgrounds, and is differentiated to provide material which is appropriate for all

pupils. It provides spiral coverage of the curriculum which involves regular revisiting of key concepts to promote familiarity through practice. This book, designed for the higher level of the GCSE, adheres to the Edexcel specification. Filled with nuts-and-bolts advice on the best ways to help young people with their homework, the author concentrates on the practical, covering how students' different learning styles and current technology inform the homework process, on staff training and community outreach, and on options for working more closely with both students and teachers. With Wiley's Enhanced E-Text, you get all the benefits of a downloadable, reflowable eBook with added resources to make your study time more effective, including: • Embedded & Searchable Tables & Figures • Links to Datasets through wiley.com • Video Solutions & Tutorials • Dataset Index embedded including links to datasets by page number Statistics: Unlocking the Power of Data, 2nd Edition continues to utilize these intuitive methods like randomization and bootstrap intervals to introduce the fundamental idea of statistical inference. These methods are brought to life through authentically relevant examples, enabled through easy to use statistical software, and are accessible at very early stages of a course. The program includes the more traditional methods like t-tests, chi-square tests, etc. but only after students have developed a strong intuitive understanding of inference through randomization methods. The focus throughout is on data analysis and the primary goal is to enable students to effectively collect data, analyze data, and interpret conclusions drawn from data. The program is driven by real data and real applications. Developed for the AQA Specification, revised for the new National Curriculum and the new GCSE specifications. The Teacher File contains detailed support and guidance on advanced planning, points of emphasis, key words, notes for non-specialist, useful supplementary ideas and homework sheets. This book is a comprehensive resource to guide work with individuals on the autism spectrum. It reflects the true range of needs presented by individuals with autism, pulling together the most salient aspects of treatment with invaluable information from several disciplines synthesized to guide your work. Divided into topical sections with chapters from three field experts in each, this book features contributions from therapists, educators, and medical doctors, as well as financial planners, health advocates, and innovators. The diverse disciplines and backgrounds of each author lend a different voice and perspective to each chapter, reflecting the continuum of care necessary when working with clientele on the autism spectrum, and that, for clients on the spectrum, one solution does not fit all. For use by psychotherapists, counselors, applied behavioral analysts, occupational therapists, social workers, teachers, and more, this text presents readers with expertise from various contributing disciplines to give them a treatment resource that can inform and guide their daily work with clients on the autism spectrum. MECHANICS OF FLUIDS presents fluid mechanics in a manner that helps students gain both an understanding of, and an ability to analyze the important phenomena encountered by practicing engineers. The authors succeed in this through the use of several pedagogical tools that help students visualize the many difficult-to-understand phenomena of fluid mechanics. Explanations are based on basic physical concepts as well as mathematics which are accessible to undergraduate engineering students. This fourth edition includes a Multimedia Fluid Mechanics DVD-ROM which harnesses the interactivity of multimedia to improve the teaching and learning of fluid mechanics by illustrating fundamental phenomena and conveying fascinating fluid flows. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Practical advice for parents from parents, and proven techniques for raising hyperactive children without losing your temper. School Social Work: A Direct Practice Guide is a text for courses in school social work. It covers the foundations of working with children and adolescents in schools, applying practice knowledge to the special school and population settings. The main goal of this text is to provide hands on and practical experience for students studying to become school social workers. Each chapter will review a basic concept and then use two in-depth activities to apply the concepts to practice. This book offers a self-study program on how mathematics, computer science and science can be profitably and seamlessly intertwined. This book focuses on two variable ODE models, both linear and nonlinear, and highlights

theoretical and computational tools using MATLAB to explain their solutions. It also shows how to solve cable models using separation of variables and the Fourier Series. How do you help your child choose between mandatory baseball practice and Hebrew school? How can you plan a birthday party (not to mention bar or bat mitzvah party!) for your child without sacrificing your values, sanity, and pocketbook? How can you keep peace on the homework homefront? And how do you deal with Santa envy--let alone the entire month of December? As any modern Jewish parent knows, balancing family traditions and the realities of contemporary culture can be incredibly challenging. Answering questions both old and new, Jewish and secular, internationally syndicated parenting columnist and award-winning Jewish educator and mother of four, Sharon Duke Estroff illuminates the ways that Jewish tradition can be used to form a lasting, emotional safety net for modern families. Can I Have a Cell Phone for Hanukkah? is an instant classic. Eating can be a source of great pleasure--or deep distress. If you've picked up this book, chances are you're looking for tools to transform your relationship with food. Grounded in dialectical behavior therapy (DBT), this motivating guide offers a powerful pathway to change. Drs. Debra L. Safer, Sarah Adler, and Philip C. Masson have translated their proven, state-of-the-art treatment into a compassionate self-help resource for anyone struggling with bingeing and other types of "stress eating." You will learn to: *Identify your emotional triggers. *Cope with painful or uncomfortable feelings in new and healthier ways. *Gain awareness of urges and cravings without acting on them. *Break free from self-judgment and other traps. *Practice specially tailored mindfulness techniques. *Make meaningful behavior changes, one doable step at a time. Vivid examples and stories help you build each DBT skill. Carefully crafted practical tools (you can download and print additional copies as needed) let you track your progress and fit the program to your own needs. Finally, freedom from out-of-control eating--and a happier future--are in sight. Mental health professionals, see also the related treatment manual, Dialectical Behavior Therapy for Binge Eating and Bulimia, by Debra L. Safer, Christy F. Telch, and Eunice Y. Chen. New National Framework Mathematics features extensive teacher support materials which include dedicated resources to support each Core and Plus Book. The 9 Core Teacher Planning Pack contains Teacher Notes for every chapter with a 'Self-contained lesson plan' for each of the units in the pupil books. The topic of trauma has been covered in many books, and there are many publications covering the use of SFBT in different settings and with varied client populations. However, the convergence of these topics has, to date, been covered only minutely. Solution-Focused Brief Therapy with Clients Managing Trauma is a comprehensive overview of how Solution Focused Brief Therapy (SFBT) can be used as a treatment approach for working with clients managing various forms of trauma. It includes an overview of SFBT's basic tenets, a description of the current research supporting SFBT as an evidence-based practice, and a comparison of how SFBT clinicians may approach trauma cases differently than clinicians from other therapeutic approaches. The bulk of the text uniquely includes chapters contributed by skilled SFBT clinicians, with differing clinical expertise, sharing their knowledge and describing their strength-based, resiliency focus of applying SFBT in different traumatic circumstances. Practitioners and even Master's/doctoral students will find this text invaluable in learning how to best help traumatized clients develop a positive future and move toward healing and health. Developed for the CCEA Specification, this Teacher File contains detailed support and guidance on advanced planning, points of emphasis, key words, notes for the non-specialist, useful supplementary ideas and homework sheets. Provides the latest information on a wide range of topics, including animals, culture, geography, the environment, history, and science. Provides the latest information on a wide range of topics, including animals, culture, geography, the environment, history, and science. Provides the latest information on a wide range of topics, including animals, culture, geography, the environments, history, and science. An invaluable resource for conducting successful solution-focused therapy. In this updated edition, Cathy Vatterott examines the role homework has played in the culture of schooling over the years; how such factors as family life, the media, and "homework gap" issues based on shifting demographics have affected the homework controversy; and what recent research as well as common sense tell us about the effects of homework on student learning. She also explores how the current homework debate has been reshaped by forces including the Common Core, a pervasive media and technology presence, the mass hysteria of "achievement culture," and the increasing shift to standards-based and formative assessment. The best

way to address the homework controversy is not to eliminate homework. Instead, the author urges educators to replace the old paradigm (characterized by long-standing cultural beliefs, moralistic views, and behaviorist philosophy) with a new paradigm based on the following elements: Designing high-quality homework tasks; Differentiating homework tasks; Deemphasizing grading of homework; Improving homework completion; and Implementing homework support programs. Numerous examples from teachers and schools illustrate the new paradigm in action, and readers will find useful new tools to start them on their own journey. The end product is homework that works--for all students, at all levels. Yearbook of Experts is America's favorite newsroom resource -- requests by tens of thousands of journalists. This new title in the Homework Helpers series will reinforce mathematical foundations and bolster students' confidence in geometry. The concepts are explained in everyday language before the examples are worked. Good habits, such as checking your answers after every problem, are reinforced. There are practice problems throughout the book, and the answers to all of the practice problems are included. The problems are solved clearly and systematically, with step-by-step instructions provided. Particular attention is placed on topics that students traditionally struggle with the most. While this book could be used to supplement standard geometry textbooks, it could also be used by college students or adult learners to refresh long-forgotten concepts and skills. Homework Helpers: Geometry includes all the topics that are traditionally covered in a high school geometry course, including: Parallel lines Congruent lines Quadrilaterals and other polygons Similarity and special triangles Right triangle trigonometry Circles Area volume and solids As in previous editions, the focus in ESSENTIAL MATHEMATICS with APPLICATIONS remains on the Aufmann Interactive Method (AIM). Students are encouraged to be active participants in the classroom and in their own studies as they work through the How To examples and the paired Examples and You Try It problems. Student engagement is crucial to success. Presenting students with worked examples, and then providing them with the opportunity to immediately solve similar problems, helps them build their confidence and eventually master the concepts. Simplicity is key in the organization of this edition, as in all other editions. All lessons, exercise sets, tests, and supplements are organized around a carefully constructed hierarchy of objectives. Each exercise mirrors a preceding objective, which helps to reinforce key concepts and promote skill building. This clear, objective-based approach allows students to organize their thoughts around the content, and supports instructors as they work to design syllabi, lesson plans, and other administrative documents. New features like Focus on Success, Apply the Concept, and Concept Check add an increased emphasis on study skills and conceptual understanding to strengthen the foundation of student success. The Ninth Edition also features a new design, enhancing the Aufmann Interactive Method and making the pages easier for both students and instructors to follow. Available with InfoTrac Student Collections <http://goengage.com/infotrac>. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Known for its accuracy, clarity, and dependability, Meriam and Kraige's Engineering Mechanics: Statics Seventh Edition has provided a solid foundation of mechanics principles for more than 60 years. Now in its seventh edition, the text continues to help students develop their problem-solving skills with an extensive variety of engaging problems related to engineering design. More than 50% of the homework problems are new, and there are also a number of new sample problems. To help students build necessary visualization and problem-solving skills, the text strongly emphasizes drawing free-body diagrams--the most important skill needed to solve mechanics problems. This book stems from a unique and highly effective approach in introducing signal processing, instrumentation, diagnostics, filtering, control, and system integration. It presents the interactive industrial grade software testbed of mold oscillator that captures the mold motion distortion induced by coupling of the electro-hydraulic actuator nonlinearity with the resonance of the mold oscillator beam assembly. The testbed is then employed as a virtual lab to generate input-output data records that permit unraveling and refining complex behavior of the actual production system through merging dynamics, signal processing, instrumentation, and control into a coherent problem-solving package. The material is presented in a visually rich, mathematically and graphically well supported, but not analytically overburdened format. By incorporating software testbed into homework and project assignments, the book fully brings out the excitement of going through the adventure of exploring and solving a mold oscillator

distortion problem, while covering the key signal processing, diagnostics, instrumentation, modeling, control, and system integration concepts. The approach presented in this book has been supported by two education advancement awards from the College of Engineering of the University of Illinois at Urbana-Champaign. Offers study tips and tools to help students gain a better understanding of course material. New edition will also include study flashcards for further practice. As in previous editions, the focus in BASIC COLLEGE MATHEMATICS remains on the Aufmann Interactive Method (AIM). Students are encouraged to be active participants in the classroom and in their own studies as they work through the How To examples and the paired Examples and You Try It problems. Student engagement is crucial to success. Presenting students with worked examples, and then providing them with the opportunity to immediately solve similar problems, helps them build their confidence and eventually master the concepts. Simplicity is key in the organization of this edition, as in all other editions. All lessons, exercise sets, tests, and supplements are organized around a carefully constructed hierarchy of objectives. Each exercise mirrors a preceding objective, which helps to reinforce key concepts and promote skill building. This clear, objective-based approach allows students to organize their thoughts around the content, and supports instructors as they work to design syllabi, lesson plans, and other administrative documents. New features like Focus on Success, Apply the Concept, and Concept Check add an increased emphasis on study skills and conceptual understanding to strengthen the foundation of student success. The Tenth Edition also features a new design, enhancing the Aufmann Interactive Method and making the pages easier for both students and instructors to follow. Available with InfoTrac Student Collections <http://goengage.com/infotrac>. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. In this volume prominent scholars, experts in their respective fields and highly skilled in the research they conduct, address educational and reading research from varied perspectives and address what it will take to close the achievement gap—with specific attention to reading. The achievement gap is redefined as a level at which all groups can compete economically in our society and have the literacy tools and habits needed for a good life. Bringing valuable theoretical frameworks and in-depth analytical approaches to interpretation of data, the contributors examine factors that contribute to student achievement inside the school but which are also heavily influenced by out-of-school factors—such as poverty and economics, ethnicity and culture, family and community stratifications, and approaches to measurement of achievement. These out-of-school factors present possibilities for new policies and practice. The overarching theme is that achievement gaps in reading are complex and that multiple perspectives are necessary to address the problem. The breadth and depth of perspectives and content in this volume and its conceptualization of the achievement gap are a significant contribution to the field. This fourth edition is a new, fully expanded version of the step-by-step guide to America's #1 online service. Using a unique combination of pictures and text, readers are shown step by step how to get online and how to get the most out of AOL's features, including many of the new ones added to version 4.0, such as instant messages, sending images, and the new Virtual Places. The disk contains AOL membership software. Dealing with grades, bullying, friendships, parents, crushes . . . it's enough to make any teenage girl wish she could snap her fingers and make it all go away. The good news is, you almost can—except it's not "snapping" but "tapping"! Formally known as Emotional Freedom Techniques (EFT), this revolutionary practice can help you reduce your feelings of anxiety and overwhelm, boost your confidence, and unpack the "stress backpack" you may not even know you're carrying. In *The Tapping Solution for Teenage Girls*, expert EFT practitioner Christine Wheeler explains the basics of the technique (it actually involves tapping, with your fingers, on energy points on your own body, and you can do it anywhere, anytime). Then she gives you simple yet powerful instructions for tapping on common challenges such as:

- Schoolwork, tests, grades, and planning for college
- Appearance and body image
- Dating, breakups, and dealing with sexual feelings
- Divorce, siblings, and blended families

Throughout the book, comments from 16-year-old Cassidy, the author's teen consultant, keep it real with helpful perspectives on how this tapping thing works—and it does work! In these pages, you'll discover that a super effective tool for dealing with stress is literally at your fingertips. If you're ready to be true to yourself, stop freaking out, and keep being awesome, *The Tapping Solution for Teenage Girls* is the perfect solution for you! *Managing Operations Across the Supply Chain* is the first book to offer a global, supply chain

perspective of operations management – a treatment that embraces the foundations of operations management but includes new frameworks, concepts, and tools to address the demands of today and changing needs of the future. It reflects three key shifts in operations management: 1. From a focus on the internal system to a focus on the supply chain 2. From a local focus to a global focus 3. From an emphasis on tools and techniques to an emphasis on systems, people, and processes

MECHANISMS AND MACHINES: KINEMATICS, DYNAMICS, AND SYNTHESIS has been designed to serve as a core textbook for the mechanisms and machines course, targeting junior level mechanical engineering students. The book is written with the aim of providing a complete, yet concise, text that can be covered in a single-semester course. The primary goal of the text is to introduce students to the synthesis and analysis of planar mechanisms and machines, using a method well suited to computer programming, known as the Vector Loop Method. Author Michael Stanisic's approach of teaching synthesis first, and then going into analysis, will enable students to actually grasp the mathematics behind mechanism design. The book uses the vector loop method and kinematic coefficients throughout the text, and exhibits a seamless continuity in presentation that is a rare find in engineering texts. The multitude of examples in the book cover a large variety of problems and delineate an excellent problem solving methodology. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
