Process Control Instrumentation Technology Mar 11 2022 This book gives readers an understanding and appreciation of some of the theories behind control system elements and operations--without advanced math or calculus. It also presents some of the practical details of how elements of a control system are designed and operated--without the benefit of on-the-job experience. Chapter topics include process control; analog and digital signal conditioning; thermal, mechanical, and optical sensors; controller principles; and control loop characteristics. For those in the industry who will need to design the elements of a control system from a practical, working perspective, and comprehend how these elements affect overall system operation and tuning.

Making a Green Machine Jan 21 2023 Making a Green Machine examines the development of the Scandinavian beverage container deposit-refund system, which has the highest return rates in the world, from 1970 to present. Finn Arne Jorgensen's comparative framework charts the complex network of business and political actors involved in the development of the reverse vending machine (RVM) and bottle deposit legislation to better understand the different historical trajectories empty beverage containers have taken across markets, including the U.S. The RVM began simply as a tool for grocers who had to handle empty refillable glass bottles, but has become a green machine to redeem the empty beverage container, helping both business and consumers participate in environmental actions.

Why Do We Recycle? Nov 19 2022 The earnest warnings of an impending "solid waste crisis" that permeated the 1980s provided the impetus for the widespread adoption of municipal recycling programs. Since that time America has witnessed a remarkable rise in public participation in recycling activities, including curbside collection, drop-off centers, and commercial and office programs. Recently, however, a backlash against these programs has developed. A vocal group of "anti-recyclers" has appeared, arguing that recycling is not an economically efficient strategy for addressing waste management problems. In *Why Do We Recycle?* Frank Ackerman examines the arguments for and against recycling, focusing on the debate surrounding the use of economic mechanisms to determine the value of recycling. Based on previously unpublished research conducted by the Tellus Institute, a nonprofit environmental research group in Boston, Massachusetts, Ackerman presents an alternative view of the theory of market incentives, challenging the notion that setting appropriate prices and allowing unfettered competition will result in the most efficient level of recycling. Among the topics he considers are: externality issues -- unit pricing for waste disposal, effluent taxes, virgin materials subsidies, advance disposal fees the landfill crisis and disposal facility siting container deposit ("bottle bill") legislation environmental issues that fall outside of market theory calculating costs and benefits of municipal recycling programs life-cycle analysis and packaging policy -- Germany's "Green Dot" packaging system and producer responsibility the impacts of production in extractive and manufacturing industries composting and organic waste management economics of conservation, and material use and long-term sustainability Ackerman explains why purely economic approaches to recycling are incomplete and argues for a different kind of decisionmaking, one that addresses social issues, future as well as present resource needs, and non-economic values that cannot be translated into dollars and cents. Backed by empirical data and replete with specific examples, the book offers valuable guidance for municipal planners, environmental managers, and policymakers responsible for establishing and implementing recycling programs. It is also an accessible introduction to the subject for faculty, students, and concerned citizens interested in the social, economic, and ethical underpinnings of recycling efforts.

Leadership for a Better World Jun 14 2022 The essential guide to the theory and application of the Social Change Model Leadership for a Better World provides an approachable introduction to the Social Change Model of Leadership Development (SCM), giving students a real-world context through which to explore the seven C's of leadership for social change as well as a approaches to socially responsible leadership. From individual, group, and community values through the mechanisms of societal change itself, this book provides fundamental coverage of this increasingly vital topic. Action items, reflection, and discussion questions throughout encourage students to think about how these concepts apply in their own lives. The Facilitator's Guide includes a wealth of activities, assignments, discussions, and supplementary resources to enrich the learning experience whether in class or in the co-

curriculum. This new second edition includes student self-assessment rubrics for each element of the model and new discussion on the critical roles of leadership self-efficacy, social perspective, and social justice perspectives. Content is enriched with research on how this approach to leadership is developed, and two new chapters situate the model in a broader understanding of leadership and in applications of the model. The Social Change Model is the most widely-used leadership model for college students, and has shaped college leadership curricula at schools throughout the U.S. and other countries including a translation in Chinese and Japanese. This book provides a comprehensive exploration of the model, with a practical, relevant approach to real-world issues. Explore the many facets of social change and leadership Navigate group dynamics surrounding controversy, collaboration, and purpose Discover the meaning of citizenship and your commitment to the greater good Become an agent of change through one of the many routes to a common goal The SCM is backed by 15 years of research, and continues to be informed by ongoing investigation into the interventions and environments that create positive leadership development outcomes. Leadership for a Better World provides a thorough, well-rounded tour of the Social Change Model, with guidance on application to real-world issues. Please note that The Social Change Model: Facilitating Leadership Development (978-1-119-24243-7) is intended to be used as a Facilitator's Guide to Leadership for a Better World, 2nd Edition in seminars, workshops, and college classrooms. You'll find that, while each book can be used on its own, the content in both is also designed for use together. Initiation Apr 12 2022 This book builds on the vast clinical experience of Joseph L. Henderson, who became interested in initiatory symbolism when he began his analysis with Jung in 1929. Henderson studied this symbolism in patients' dreams, fantasies, and active imagination, and demonstrated the archetype of initiation in both men and women's psychology. After Henderson's book was republished in 2005 Kirsch, Beane Rutter and Singer brought together this collection of essays to allow a new generation to explore the archetype of initiation. Initiation: The Living Reality of an Archetype demonstrates how the archetype of initiation is seen clinically today. Divided into distinct parts, the book explores the archetype of initiation in Dr Henderson's own life, as well as suggesting its importance in: clinical practice culture aging and death. The chapters in this book amplify and extend the archetype of initiation from the earliest historical periods up to the present day. The editors argue that initiation symbolism often underlies contemporary phenomena, but is rarely recognized; Initiation helps to bring a new understanding to these experiences. This book will be of interest to psychotherapists with an interest in psychoanalysis and analytical psychology, as well as those training at analytic institutes.

Rapt Sep 17 2022 The behavioral scientist author of Just the Way You Are presents a provocative argument that the quality of one's life is directly related to the focus of one's attention, drawing on the latest findings in neuroscience and psychology to cover such topics as the human capacity for training concentration, the ways in which the creative mind thinks, and why people deliberate on the wrong factors when making big decisions.

Shakespeare's Possible Worlds Aug 16 2022 As Shakespeare's best-known and most written-about text, indeed one of the world's most studied texts, Hamlet has inspired countless interpretations and adaptations by artists and writers the world over. At the same time, Hamlet is itself an adaptation of Danish folklore retold through Latin, French, and English translations. Using the possible/fictional-world theories of Saul Kripke, David Lewis, Lubomír Doležel, Douglas Lanier, and others, this work examines Shakespeare's Hamlet as an adaptation of its historical and literary sources, alongside a representative sample of texts in English, French, and Spanish which use Hamlet as their source. Texte le plus célèbre et le plus glosé de Shakespeare, et sans doute l'un des textes les plus étudiés au monde, Hamlet a inspiré d'innombrables interprétations et adaptations, signés par des artistes et écrivains

venus des quatre coins du globe. Dans le même temps, Hamlet est lui-même une adaptation du folklore danois, revisité à travers ses traductions latines, françaises et anglaises. S'appuyant sur les théories des mondes possibles/fictionnels de Saul Kripke, David Lewis, Lubomír Doležel et Douglas Lanier, entre autres, cette étude examine l'Hamlet de Shakespeare en tant qu'adaptation de ses sources historiques et littéraires, à côté d'un échantillon représentatif de textes de langue anglaise, française et espagnole dont Hamlet est la source.
