How did descriptions of individuals' appearance reinforce emergent categories of race? In Colonial Complexions, more than 4000 advertisements for runaway slaves and servants reveal how colonists transformed seemingly observable characteristics into racist reality. Traces the history of Hawaiian sports and lists local records 55,000 biographies of people who shaped the history of the British Isles and beyond, from the earliest times to the year 2002. This collection of essays examines issues of race in a variety of historical and geographical settings, ranging from classical Greece to the contemporary Americas, Europe and Asia. The authors provide a perspective on race both in theoretical origins and appearances. This book is based on practical experience and is therefore written as a practical manual. The fore-runners of the book were the manuals of the first and second EMBO-Courses on "Micromethods in Molecular Biology" which were held in G6ttingen in the spring of 1970 and the autumn of 1971. This book may serve as a manual not only for the participants of the third EMBO-Course to be held in G6ttingen in autumn 1973, but also for all experimenters who are interested in using micromethods. It must be emphasized from the outset that this

book is conceived as a "cook book" and not as a monograph which attempts to review the literature on micromethods critically. The methods described here in detail are performed routinely in the authors' laboratories and include all the practical details necessary for the successful application of the micromethods. There are many other sensitive and excellent micro methods which are not included in this book, because the authors feel that in a "cook book" only methods for which they have personal experience and proficiency should be described. Some readers may feel that the title promises more than the present contents of this book; however, if sufficient interest is shown in this volume, it may be possible to remedy such deficiencies in future editions. PIID is conveniently divided into three easy-access sections: Geographical and ISBN sections provide complete contact information for each publisher, while an Alphabetical Index identifies the publisher's location. (Handbook of International Documentation and Information, Vol. 7)

On a dusty, sweltering night, Noor Khan, a beautiful, headstrong Afghan refugee, comes face-to-face with Charlie Matthews, a brash, young American aid worker. To Noor's fury, Charlie breaks every cultural norm and pursues her. She wants nothing to do with him: her sole aim in life is to earn an overseas scholarship so she can escape the miseries of the refugee camps. However when Noor's brother threatens to marry her off, she is forced to seek refuge in Charlie's home, of all places, and suddenly everything Noor believes in is put into question. Set in the mystical and seething city of Peshawar, where no one is without an agenda and few can be trusted, Refuge is a timeless and unforgettable love story about the struggle for love and purpose in a cruel and cynical world.

BOOK TWO - RESILIENCE - IS NOW OUT

The fourth volume of Research Methods in Neurochemistry includes chapters on different aspects of topics touched on in previous volumes and develops a number of new themes as well. The bias, though not entirely intended, is directed toward studies of macromolecules, both at the metabolic level in relation to protein synthesis and at the structural level in relation to specific proteins and lipids. The new departures concern subjects in Section I with marked applied bias: biochemical studies of nervous system tumors and of the cerebrospinal fluid, both of which we hope will be of value to clinical as well as basic scientists. Biogenic amines and the enzymes involved in their metabolism figure again in Section II, where the powerful tool of mass spectrometry receives further treatment in relation to the analysis of dansyl derivatives of trace amines in the brain. Once again we remain grateful to the individual authors, both for their contributions and patience, and to Plenum Press for their continued interest and cooperation. Thanks are also due to colleagues and friends for their comments and criticisms on the series as a whole; suggestions for future volumes will always be welcome and should be sent to one of the editors. Richard Rodnight,

PROPERTIES OF INTACT NEURAL TISSUES Chapter 1 Biochemical Study of Tumors of the Nervous System. 3 Norman Allen I. Introduction. 3 II. Human Brain Tumors. 7 A. Autopsy Specimens.

. Edited by one of the world's leading authorities in the field, *Bread Making: Improving Quality* reviews key recent research on the ingredients determining bread characteristics. The text discusses what this information means for improved process control and a better, more consistent product. After an introductory review, Part 1 discusses such concepts as the structure and quality of wheat and flour, and methods for measuring quality. Part 2 covers dough formation and its impact on bread's structure and properties. This includes such concepts as foam formation and bread aeration, key ingredients, improving taste and nutritional properties, and the prevention of moulds and mycotoxin contamination. As the use of three-dimensional ultrasound in clinical practice increases, the need for a reference covering this and other emerging technologies also increases. The book presents three-dimensional ultrasound images in full colour accompanied by extensive captions and expert textual commentary. It provides authoritative coverage of the latest devel It is December 2001. Eight years on, Charlie remains imprisoned in a Saudi Arabian jail while Noor has made a life for herself and her child in a North Carolina mountain town. After the recent 9/11 attacks the world is a very different place. Yet Charlie and Noor are faced with the same issue. Will they reunite? And if they do, will they ever be allowed to live in peace? It seems unlikely. After all Charlie is serving a life sentence and the Prince still has men searching for Noor and his child. Yet one thing that can never be extinguished is Charlie and Noor's love for each other nor Noor's love for her child. It means they are prepared to take risks that others would flee from. In *Release*, the third and final novel in the *Refuge Trilogy*, N. G. Osborne concludes Noor and Charlie's epic story. It takes us on a thrilling and emotional journey from Saudi Arabia to Pakistan and all the way across the United States, with one burning question ever present. Will Noor and Charlie finally be released from the forces that are so intent on tearing them apart? Pregnancy, childbirth and being a newborn are not diseases - they are special periods in human life when the risk of death or disability can be very high. Recognizing this, the last decade has brought enormous progress in science and technology into improving maternal and newborn health, such as the treatment of genetic diseases, intra-uterine surg
