The marking of fishing vessels is important for their identification, to support the global efforts to promote sustainable fisheries, for safety at sea and to combat illegal, unreported and unregulated fishing. For this reason, the FAO Standard Specifications for the Marking and Identification of Fishing Vessels were developed and endorsed by COFI in 1989 as a voluntary instrument providing a standardized system for the identification of fishing vessels operating, or likely to operate, in waters of another State. Global developments have had an impact on the usefulness of the FAO Standard Specifications, specifically the increased use of the International Maritime Organization number as a unique vessel identifier and the establishment of the FAO's Global Record. This document provides background to the development of the FAO Standard Specifications and the results of a study to assess the level of their adoption at the national, regional and international levels. It also describes progress in the areas of vessel identity, vessel tracking, different vessel types and catch traceability and how these impact the usefulness of the FAO Standard Specifications. Finally, the document proposes a review and update of the FAO Standard Specifications. Summary Writing Great Specifications is an example-rich tutorial that teaches you how to write good Gherkin specification documents that take advantage of the benefits of specification by example. Foreword written by Gojko Adzic. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology The clearest way to communicate a software specification is to provide examples of how it should work. Turning these story-based descriptions into a well-organized dev plan is another matter. Gherkin is a human-friendly, jargon-free language for documenting a suite of examples as an executable specification. It fosters efficient collaboration between business and dev teams, and it's an excellent foundation for the specification by example (SBE) process. About the Book Writing Great Specifications teaches you how to capture executable software designs in Gherkin following the SBE method. Written for both developers and non-technical team members, this practical book starts with collecting individual feature stories and organizing them into a full, testable spec. You'll learn to choose the best scenarios, write them in a way that anyone can understand, and ensure they can be easily updated by anyone. management. What's Inside Reading and writing Gherkin Designing story-based test cases Team Collaboration Managing a suite of Gherkin documents About the Reader Primarily written for developers and architects, this book is accessible to any member of a software design team. About the Author Kamil Nicieja is a seasoned engineer, architect, and project manager with deep expertise in Gherkin and SBE. This document identifies the instructional goals, required training topics, learning activities, tests, and instructional hour standards that comprise the required content of the (California) Public Safety Dispatchers' Basic Course. The increasing complexity of the Public Safety Dispatcher's job and the advance of communications technology require the routine updating of instructional content and teaching methodologies in the Public Safety Dispatchers' Basic Course. Effective initial training is crucial if a Public Safety Dispatcher is to acquire the requisite knowledge, skills, abilities, and tasks to provide quality service to the public. Communications personnel from both law enforcement agencies and community colleges participated in course development. The course contains the learning domains listed in the table of contents. Excerpt from Standard Specifications for Railroad and Canal Construction: For the Use of Contractors and Civil Engineers; Railroads, Form for Contracts, Agreements, Right-of-Way and Lease, With Specifications for Clearing, Close Cutting, Grubbing, Grading, Tunneling, Masonry, Piling, Foundations, Timber Work, Fencing Full information on this subject is essential to an Engineer, and while Specifications have been presented creditably before they have generally been compiled with other matters, making the material too limited to answer all requirements.
