I want to show you our world as it is now: the door, the floor, the water tap and the sink, the garden chair close to the wall beneath the kitchen window, the sun, the water, the trees. You will come to see it in your own

way, you will experience things for yourself and live a life of your own, so of course it is primarily for my own sake that I am doing this: showing you the world, little one, makes my life worth living. Autumn begins with a letter Karl Ove Knausgaard writes to his unborn daughter. He adds one short piece per day, describing the material and natural world with the precision and mesmerising intensity that have become his trademark. This tender and deeply personal book is beautifully illustrated by Vanessa Baird, and is the first of four volumes marvelling at the vast, unknowable universe around us. In this sparkling collection edited by Robert Phillips, Shapiro's most trenchant writings on poetry, poets, and cultural matters are once again available. This book presents four lectures on Marx's Capital, delivered by C. P. Chandrasekhar on Volume 1's anniversary: "Capital and the Critique of Bourgeois Political Economy"; "Order and Anarchy in the Capitalist System"; 'Revisiting Capital in the Age of Finance'; and "Marx's Capital and the Current Crisis in Capitalism." "In Search of a Better World is a collection of Popper's essays and lectures covering a range of subjects from the beginning of scientific speculation in classical Greece to the need for a new professional ethic based on the ideas of tolerance and intellectual responsibility. Popper discusses major figures of the Enlightenment such as Voltaire and Kant, as well as logic of the social sciences and the role of science and self-criticism in the arts."--Back cover Offers a synthesis of the Continental and the analytical philosophies of language via a semiotical transformation of Kantian philosophy. The author develops a post-metaphysical philosophical system that grounds semiotically and transcendently a theory of types of rationality, a pragmatic theory of truth, a hermeneutics, and an anthropology. At a recent meeting of the World Economic Forum in Davos, it was reported that a ghost was haunting the deliberations of the assembled global elite - that of the renowned social scientist and economic historian, Karl Polanyi. In his classic work, The Great Transformation, Polanyi documented the impact of the rise of market society on western civilization and captured better than anyone else the destructive effects of the economic, political and social crisis of the 1930s. Today, in the throes of another Great Recession, Polanyi's work has gained a new significance. To understand the profound challenges faced by our democracies today, we need to revisit history and revisit his work. In this new collection of unpublished texts - lectures, draft essays and reports written between 1919 and 1958 - Polanyi examines the collapse of the liberal economic order and the demise of democracies in the inter-war years. He takes up again the fundamental question that preoccupied him

throughout his work - the place of the economy in society - and aims to show how we might return to an economy anchored in society and its cultural, religious and political institutions. For anyone concerned about the danger to democracy and social life posed by the unleashing of capital from regulatory control and the dominance of the neoliberal ideologies of market fundamentalism, this important new volume by one of the great thinkers of the twentieth century is a must-read. Karl Barth was the master theologian of our age. Whenever men in the past generation have reflected deeply on the ultimate problems of life and faith, they have done so in a way that bears the mark of the intellectual revolution let loose by this Swiss thinker. But his life was not simply one of quiet reflection and scholarship. He was obliged to do his thinking and writing in one of the stormiest periods of history, and he always attempted to speak to the problems and concerns of the time. In June 1933 he emerged as the theologian of the Confessional movement, which was attempting to preserve the integrity of the Evangelical Church in Germany against corruption from within and terror from without. His leadership in this struggle against Nazism also made it necessary for him to say something about the totalitarianism that the Soviet power was clamping down upon a large part of Europe. In this indirect way, a Barthian social philosophy emerged, and this theologian, who abjured apologetics and desired nothing but to expound the Word of God, was compelled by circumstances to propound views on society and the state that make him one of the most influential social thinkers of our time. David Haddorff is Associate Professor of Theology and Religious Studies at St. John's University, New York. He is the author of several articles and reviews, and the book: Dependence and Freedom: The Moral Thought of Horace Bushnell (1994). Table of Contents: Introduction by David Haddorff - Karl Barth's Theological Politics 1 Gospel and Law 71 Church and State 101 The Christian Community and the Civil Community 149 Bibliography 191 In this fascinating collection of essays Harvard Emeritus Professor Karl S. Guthke examines the ways in which, for European scholars and writers of the eighteenth and early nineteenth century, world-wide geographical exploration led to an exploration of the self. Guthke explains how in the age of Enlightenment and beyond intellectual developments were fuelled by excitement about what Ulrich Im Hof called "the grand opening-up of the wide world", especially of the interior of the non-European continents. This outward turn was complemented by a fascination with "the world within" as anthropology and ethnology focused on the humanity of the indigenous populations of

far-away lands – an interest in human nature that suggested a way for Europeans to understand themselves, encapsulated in Gauguin's Tahitian rumination "What are we?" The essays in the first half of the book discuss first- or second-hand, physical or mental encounters with the exotic lands and populations beyond the supposed cradle of civilisation. The works of literature and documents of cultural life featured in these essays bear testimony to the crossing not only of geographical, ethnological, and cultural borders but also of borders of a variety of intellectual activities and interests. The second section examines the growing interest in astronomy and the engagement with imagined worlds in the universe, again with a view to understanding homo sapiens, as compared now to the extra-terrestrials that were confidently assumed to exist. The final group of essays focuses on the exploration of the landscape of what was called "the universe within"; featuring, among a variety of other texts, Schiller's plays The Maid of Orleans and William Tell, these essays observe and analyse what Erich Heller termed "The Artist's Journey into the Interior." This collection, which travels from the interior of continents to the interior of the mind, is itself a set of explorations that revel in the discovery of what was half-hidden in language. Written by a scholar of international repute, it is eye-opening reading for all those with an interest in the literary and cultural history of (and since) the Enlightenment. 'I want to begin by declaring that I regard scientific knowledge as the most important kind of knowledge we have', writes Sir Karl Popper in the opening essay of this book, which collects his meditations on the real improvements science has wrought in society, in politics and in the arts in the course of the twentieth century. His subjects range from the beginnings of scientific speculation in classical Greece to the destructive effects of twentieth century totalitarianism, from major figures of the Enlightenment such as Kant and Voltaire to the role of science and self-criticism in the arts. The essays offer striking new insights into the mind of one of the greatest twentieth century philosophers. This is the second volume of the works of Karl Abraham, whose "Selected Papers on Psycho-Analysis" (catalogue number 2483) is one of the most widely read and highly valued classics on the subject. The first part of this book contains short clinical papers on a wide range of subjects, including The Psychogenesis of Agoraphobia in Childhood, The Role of Grandparents in the Psychology of Neurosis, The Emotional Relationships of Little Girls towards their Parents, early Infantile Thinking, and others. The present volume consists of a translation of some of Karl Marx's principal writings during the six years 1844-1850. Orio Giarini The "Geneva Association"

(International Association for the Study of Risk and Insurance Economics) was founded in 1973. The main goal was to stimulate and organize objective research in the field of risk, uncertainty, and insurance, in a world in which such issues were clearly becoming of greater and greater relevance for all economic actors. This was a pioneering effort, especially as economic theory and the teaching of economics were still anchored to the key notion of general equilibrium under an assumption of certainty. Thus, we had to start our work almost from scratch. One of the first initiatives was to bring together in Geneva, in June of 1973, all the academics in Europe already involved in risk and insurance economics. We found eight from five different countries who never had met before. This seminar chaired by Raymond Barre, the first president of The Geneva Association, was the first of an annual series that became known as the seminar of "The European Group of Risk and Insurance Economists." Since then more than 100 economists from most European countries as well as participants from two other continents and in particular from the United States have taken part in this seminar. This long-standing series provides the guild of religion scholars a venue for publishing aimed primarily at colleagues. It includes scholarly monographs, revised dissertations, Festschriften, conference papers, and translations of ancient and medieval documents. Works cover the sub-disciplines of biblical studies, history of Christianity, history of religion, theology, and ethics. Festschriften for Karl Barth, Donald W. Dayton, James Luther Mays, Margaret R. Miles, and Walter Wink are among the seventy-five volumes that have been published. Contributors include: C. K. Barrett, Francois Bovon, Paul S. Chung, Marie-Helene Davies, Frederick Herzog, Ben F. Meyer, Pamela Ann Moeller, Rudolf Pesch, D. Z. Phillips, Rudolf Schnackenburg, Eduard Schweizer, John Vissers A great American writer's confrontation with a great European critic—a personal and intellectual awakening A hundred years ago, the Viennese satirist Karl Kraus was among the most penetrating and farsighted writers in Europe. In his self-published magazine, Die Fackel, Kraus brilliantly attacked the popular media's manipulation of reality, the dehumanizing machinery of technology and consumer capitalism, and the jingoistic rhetoric of a fading empire. But even though he had a fervent following, which included Franz Kafka and Walter Benjamin, he remained something of a lonely prophet, and few people today are familiar with his work. Luckily, Jonathan Franzen is one of them. In The Kraus Project, Franzen, whose "calm, passionate critical authority" has been praised in The New York Times Book Review,

not only presents his definitive new translations of Kraus but annotates them spectacularly, with supplementary notes from the Kraus scholar Paul Reitter and the Austrian author Daniel Kehlmann. Kraus was a notoriously cantankerous and difficult writer, and in Franzen he has found his match: a novelist unafraid to voice unpopular opinions strongly, a critic capable of untangling Kraus's often dense arguments to reveal their relevance to contemporary America. While Kraus is lampooning the iconic German poet and essayist Heinrich Heine and celebrating his own literary hero, the Austrian playwright Johann Nestroy, Franzen is annotating Kraus the way Kraus annotated others, surveying today's cultural and technological landscape with fearsome clarity, and giving us a deeply personal recollection of his first year out of college, when he fell in love with Kraus's work. Painstakingly wrought, strikingly original in form, The Kraus Project is a feast of thought, passion, and literature. In his latest book of essays Karl Miller turns his attention to appreciate certain writers of the English-speaking modern world. A new ruralism has come to notice in this country, and the book is drawn to country lives as they have figured in the literature of the last century. An introductory essay is centered on the Anglo-Welsh borderlands. Journeys taken with Seamus Heaney and Andrew O'Hagan to this countryside, and others, are threaded throughout the book. The poets Seamus Heaney and Ted Hughes are discussed, together with the fiction of Ian McEwan, the Canadian writer Alistair Macleod, the Irish writer John McGahern and the Baltimorean Anne Tyler. Scotland is a preoccupation of the later pieces, including the letters of Henry Cockburn, a lifelong interest of the author, who is also interested here in foxes and their current metropolitan profile. Paul Reitter has won acclaim as both a scholar and a public critic for his writing on German Jewish culture in the twentieth century. Bambi's Jewish Roots brings together the best of Reitter's essayistic work, exploring the lives of well-known figures and revealing surprising new perspectives. These include how Felix Salten's Zionist commitments manifest themselves in his most famous work, the novel Bambi; what Gershom Scholem's diaries tell us about his development as a thinker and person; why German-Jewish writers hated Stefan Zweig so passionately; where myth-busting books about Franz Kafka have indulged in myth-building; how Freud's Moses and Monotheism offers a theory of Jewish self-hatred more than an explanation of anti-Semitism; and why Heinrich Heine felt an aburning need to distance himself from his fellow liberal Jewish critic Ludwig Börne. The works collected here, many of which were originally published in forums such as the New York Review of Books,

London Review of Books, the Times Literary Supplement, The Nation, Harper's Magazine, and the Jewish Review of Books, have earned Reitter his reputation as a witty, erudite, and deeply illuminating critic. 'Never before has there been so many and such dreadful weapons in so many irresponsible hands.' - Karl Popper, from the Preface All Life is Problem Solving is a stimulating and provocative selection of Popper's writings on his main preoccupations during the last twenty-five years of his life. This collection illuminates Popper's process of working out key formulations in his theory of science, and indicates his view of the state of the world at the end of the Cold War and after the collapse of communism. This unique collection of essays, published together for the first time, not only elucidates the complexity of ancient Greek thought, but also reveals Karl Popper's engagement with Presocratic philosophy and the enlightenment he experienced in his reading of Parmenides. As Karl Popper himself states himself in his introduction, he was inspired to write about Presocratic philosophy for two reasons - firstly to illustrate the thesis that all history is the history of problem situations and secondly, to show the greatness of the early Greek philosophers, who gave Europe its philosophy, its science and its humanism. This collection of Haydn essays, spanning more than sixty years, is representative of the wide ranging interests of an esteemed scholar and includes published, unpublished, out of print and previously untranslated publications. Concludes with a revised and updated bibliography of Geiringer publications pertaining to Haydn. First Published in 1951. In common with great sociologists of the past, such as Comte and Spencer, Marx and Max Weber, Mannheim engaged in sociological study as a response to the challenging present. This is volume IV of Freedom, Power and Democratic Planning is the collected works of Karl Mannheim. "This Study of the Early American conservation movement reveals the hidden history of three of the nation's first parks: the Adirondacks, Yellowstone, and the Grand Canyon. Karl Jacoby traces the effects that the criminalization of such traditional rural practices as hunting, fishing, and foraging had on country people in these areas. Despite the presence of new environmental regulations, poaching arson, and timber stealing became widespread among the Native Americans, poor whites, and others who had long relied on the natural resources now contained within conservation areas. Jacoby reassesses the nature of these "crimes," providing a rich and multifaceted portrayal of rural people and their relationship with the natural world in the late nineteenth and early twentieth centuries." "Crimes against Nature includes previously unpublished historical photographs

depicting such subjects as poachers in Yellowstone and a Native American "squatters' camp" at the Grand Canyon. This study demonstrates the importance of considering class for understanding environmental history and opens a new perspective on the social history of rural and poor people a century ago."--Jacket of 2001 edition This collection of essays originates from Karl Mannheim's early career, which saw him introduce theoretical concepts which remain influential in sociology to this day. Dr. Paul Kecskemeti compiled this insightful compendium of Mannheim's initial publications of sociological theory in 1951, with none of the essays having hitherto appeared in English. These writings are valuable, for they show the beginnings of several concepts which were to flourish during Mannheim's later career. His ideas surround individual thought processes, their influence upon the society at large, and how the acquisition of knowledge cultural and ideological changes a given country subtly and overtly. Many of Mannheim's ideas build upon initial investigations by Émile Durkheim, applying the idea of a sociology of knowledge to different facets of human reality. For example, he examines the impact of acquired knowledge on the social strata and different classes in a society, and how cultural and social mores are passed along with successive generations. How and to what extent intellectual ideas and the popularity of ideology foment change in a society is a recurring theme, which would see further study as Mannheim's career progressed. Always controversial, always compelling, the German philosopher Karl Marx is one of the most influential thinkers of the modern era. In this thought-provoking collection of essays, Marx elucidates some his best-known theories and ideas about society, economics, and politics. First Published in 1943. Routledge is an imprint of Taylor & Francis, an informa company. Four years into the unfolding of the most serious crisis since the 1930s, Karl Polanyi's prediction of the fateful consequences of unleashing the destructive power of unregulated market capitalism on peoples, nations, and the natural environment has assumed new urgency and relevance. Polanyi's insistence that 'the self-regulating market' must be made subordinate to democracy, otherwise society itself may be put at risk, is as true today as it was when Polanyi wrote. Written from the unique perspective of his daughter, From the Great Transformation to the Great Financialization is an essential contribution to our understanding of the evolution and contemporary significance of Karl Polanyi's work, and should be read against the background of the accelerating accumulation of global finance that created a series of financial crises in Latin America, Russia, Asia, and, eventually, the heartlands of capitalism itself. "Spring

features Knausgaard unbound, writing for the first time without a gimmick or the crutch of extravagant experimentation...Fall in love with the world, he enjoins, stay sensitive to it, stay in it." -The New York Times "Poignant and beautiful...Even if you think you won't like Knausgaard, try this one and you'll get him and get why some of us have gone crazy for him." —Los Angeles Review of Books You don't know what air is, and yet you breathe. You don't know what sleep is, yet you sleep. You don't know what night is, yet you lie in it. You don't know what a heart is, yet your own heart beats steadily in your chest, day and night, day and night, day and night. So begins Spring, the recommencement of Knausgaard's fantastic and spellbinding literary project of assembling a personal encyclopedia of the world addressed directly to his newly born daughter. But here Knausgaard must also tell his daughter the story of what happened during the time when her mother was pregnant, and explain why he now has to attend appointments with child services. In order to keep his daughter safe, he must tell a terrible story, one which unfolds with acute psychological suspense over the course of a single day. Utterly gripping and brilliantly rendered in Knausgaard's famously sensitive, pensive, and honest style, Spring is the account of a shocking and heartbreaking familial trauma and the emotional epicenter of this singular literary series. A brilliantly wide-ranging essay collection from the author of My Struggle, spanning literature, philosophy, art and how our daily and creative lives intertwine. In the Land of the Cyclops is Karl Ove Knausgaard's first collection of essays to be published in English, and these brilliant and wide-ranging pieces meditate on themes familiar from his groundbreaking fiction. Here, Knausgaard discusses Madame Bovary, the Northern Lights, Ingmar Bergman, and the work of an array of writers and visual artists, including Knut Hamsun, Michel Houellebecq, Anselm Kiefer and Cindy Sherman. These essays beautifully capture Knausgaard's ability to mediate between the deeply personal and the universal, demonstrating his trademark self-scrutiny and his deep longing to authentically see, understand, and experience the world. 'Knausgaard is among the finest writers alive' New York Times
