Are you staring at the mountain of revision in front of you and wondering where to start? Routledge Q&As will help guide you through the revision maze, providing essential exam practice and helping you polish your essay-writing technique. Each Routledge Q&A contains 50 essay and problem-based questions on topics commonly found on exam papers, complete with answer plans and fully worked model answers. The titles are written by lecturers who are also examiners, so you can recognise exactly what examiners are looking for in an answer. Key cases and legislation are highlighted within the text for ease of reference Boxed answer plans after each question outline the major points you should be aiming to convey within your answer The books in this series are supported by a companion web offering you bonus q&as; advice on preparing for your exams; revision checklists; discussion forums and more. But don't just take our word for it! "The book was an answer to my prayers... I've been begging tutors to give us ready-made answers so we get a structure as to what we should be including and revising and the Q&As do exactly that!" Azmina Thanda, 2nd year LLB "The Routledge Q&As are very well designed and helpful, giving a good indication of what comes up in exams." Deaglan McArdle, 3rd year LLB This guide to micromanipulation techniques, for assisted conception in a clinical setting, includes detailed descriptions of all common micromanipulation systems currently in use in IVF laboratories. In explaining how to optimize their successful use, the volume covers state-of-the-art techniques including ICSI, and procedures such as assisted hatching and the blastomere biopsy (for PGD). Valuable information on troubleshooting mechanical and technical difficulties is provided to help professionals ranging from technicians to consultant obstetricians master the techniques. This new edition of Guide to Process Based Modeling of Lakes and Coastal Seas brings the modeling up to date, taking into account multiple stressors acting on aquatic systems. The combination of acidification and increasing amounts of anoxic waters associated with eutrophication puts severe stress on the marine environment. The detection and attribution of anthropogenic changes in coastal seas are therefore crucial and transparent modeling tools are increasingly important. Modeling the marine CO₂–O₂ system makes systematic studies on climate change and eutrophication possible and is fundamental for understanding the Earth system. This second edition also includes new sections on detection and attribution and on modeling future changes, as well as improved exercises, updated software, and datasets. This unique book will stimulate students and researchers to develop their modeling skills and make model codes and data transparent to other research groups. It uses the general equation solver PROBE to introduce process-oriented numerical modeling and to build understanding of the subject step by step. The equation solver has been used in many applications, particularly in Sweden and Finland with their numerous lakes, archipelago seas, fjords, and coastal zones. It has also been used for process studies in the Polar Seas and the Mediterranean Sea and the approach is suitable for applications in many other environmental applications. Guide to Process Based Modeling of Lakes and Coastal Seas: • is a unique teaching tool for systematic learning of aquatic modeling; • approaches lake and ocean modeling from a new angle; • introduces aquatic numerical modeling using a process-based approach; • enables the thorough understanding of the physics and biogeochemistry of lakes and coastal seas; • provides software, datasets, and algorithms needed to reproduce all calculations and results in the book; • provides a number of creative and stimulating exercises with solutions; • addresses the interaction between climate change and eutrophication and is a good basis for learning Earth System Sciences.
