Discover BIM: A better way to build better buildings Building Information Modeling (BIM) offers a novel approach to design, construction, and facility management in which a digital representation of the building product and process is used to facilitate the exchange and interoperability of information in digital format. BIM is beginning to change the way buildings look, the way they function, and the ways in which they are designed and built. The BIM Handbook, Third Edition provides an in-depth understanding of BIM technologies, the business and organizational issues associated with its implementation, and the profound advantages that effective use of BIM can provide to all members of a project team. Updates to this edition include: Information on the ways in which professionals should use BIM to gain maximum value New topics such as collaborative working, national and major construction clients, BIM standards and guides A discussion on how various professional roles have expanded through the widespread use and the new avenues of BIM practices and services A wealth of new case studies that clearly illustrate exactly how BIM is applied in a wide variety of conditions Painting a colorful and thorough picture of the state of the art in building information modeling, the BIM Handbook, Third Edition guides readers to successful implementations, helping them to avoid needless frustration and costs and take full advantage of this paradigm-shifting approach to construct better buildings that consume fewer materials and require less time, labor, and capital resources. Starting in 1956 when Ford officially entered motor racing, this book takes the reader on a journey of how and why things happened the way they did. Who were the personalities behind the all the different Ford GT development programs, old and new. Much has been published on heart health, kidney health, and gut health. But how many of us are aware of our blood health? Is your blood as healthy as it should be? How would you even know? Blood Works is a fascinating new blood owners' guide to help you care for the health of your most precious fluid—your blood. About 2 billion people globally are anemic, and almost as many suffer from iron deficiency without anemia. Many don't even know they have it, just feeling tired, lethargic, and "foggy-headed." Sound familiar? Over 600 million more suffer from acute or sometimes unrecognized chronic blood loss from causes such as heavy menstrual bleeding, obstetric hemorrhage, gastrointestinal bleeding, surgery, and trauma. Anemia, iron deficiency, and bleeding are signs of "blood failure" and have major negative health effects. Blood Works, with contributions from 48 leading international medical experts, is a must have book for all who want to look after their blood health. Your blood is the essential fluid that keeps you alive. Yet, while many of us know our cholesterol level and blood pressure, few of us are aware of our blood count. What we don't know can affect our everyday quality of life and put us at risk if we have bleeding, an injury, or require hospitalization. Blood, and the vessels that contain it, make up the largest organ system in the body. Its balance and health must be maintained. For many decades, the treatment of first resort for anemia and blood loss has been blood transfusion, which is essentially a "liquid organ" transplant from another person. In heart failure or kidney failure, organ transplantation is not first-line treatment. In blood failure, blood "transplantation" should not be the first thing we reach for. Since the 1990s, scientific research has shown that the common use of blood transfusion is not the most effective treatment in many medical situations. It has been identified as one of the most overused treatments in modern medicine, costing billions of dollars, while causing changes in the recipient's immune system that may increase the risk of complications and death. In October 2021, the World Health Organization called for the urgent global implementation of Patient Blood Management (PBM), stating "our own blood is still the best thing to have in our veins." Blood Works is one of the most exciting books on blood health you will read. The book zooms in on why medical experts from around the world now recognize the need for fundamental change in the way a patient's blood is managed. Known as PBM, Patient Blood Management places the person receiving treatment at the center of decisions involving their lifeblood. Its aim is to improve general health and treatment outcomes by managing and preserving a patient's own blood while empowering them to share in making decisions. Meticulously researched and referenced, masterfully illustrated, and featuring personal stories from patients and their families, Blood Works is a compelling read. It will have a profound impact on your health and the health of your loved ones and is an invaluable resource for health care professionals. This book expands on the literature on the characteristics of management boards by especially focusing on family-listed and family-controlled companies, as they are ideal for studying board heterogeneity. It uses specific multidimensional indices and in-depth econometric analysis to introduce new variables, such as international experience, that represent a source of competitive advantage for firms in today's globalized world. In addition, by examining the heterogeneity ratio and the representation of independent and family directors, the book demonstrates how family-controlled firms use independent directors to import their heterogeneous expertise. The book makes a threefold contribution: for regulators, it offers suggestions on improving the quality of reporting in family-controlled firms; for researchers, it demonstrates the importance of including directors' characteristics apart from the firm-specific factors in their analyses; and for practitioners, it shows that selecting directors with specific characteristics can have a substantial impact on firms' performance. The first edition of this book was quickly acclaimed as the new leading text worldwide on the law and practice of pollution from ships. There have been numerous failed efforts at regional cooperation in different fora in the Indian Ocean. As a result of the land-based orientation of the people in the region, the importance for countries to develop the power to govern the sea has largely been ignored. The maritime approach taken by Manoj Gupta to the Indian Ocean as a region in international relations offers a timely and critical assessment of the potential for regional cooperation and ocean governance. The political leadership in the region can no longer ignore the need for cooperation in maritime affairs in the Indian Ocean. This book enriches the literature on Indian Ocean issues as it argues convincingly that the security of nations, economic well-being of the people and health of the Indian Ocean cannot be divested from one another. All are fundamentally dependant on the ability of the countries in the region to individually and collectively exert the power to govern the sea. Formal methods have been applied successfully to the verification of medium-sized programs in protocol and hardware design. However, their application to the development of large systems requires more emphasis on specification, modelling and validation techniques supporting the concepts of reusability and modifiability, and their implementation in new extensions of existing programming languages like Java. The 6th International Symposium on Formal Methods for Components and Objects, FMCO 2007, was held in Amsterdam, The Netherlands, in October 2007. This book presents 12 revised papers submitted after the symposium by the speakers of each of the following European IST projects: the IST-FP6 project Mobius, developing the technology for establishing trust and security for the next generation of global computers; the IST-FP6 project SelfMan on self management for large-scale distributed systems based on structured overlay networks and components; the IST-FP6 project GridComp and the FP6 CoreGRID Network of Excellence on grid programming with components; the Real-time component cluster of the Network of Excellence in Embedded System Design ARTIST, focussing on design processes, and architectures for real-time embedded systems; and the IST-FP6 project CREDO on modeling and analysis of evolutionary structures for distributed services.
