Conflict of Interest in Medical Research, Education, and Practice Mar 29 2021 Collaborations of physicians and researchers with industry can provide valuable benefits to society, particularly in the translation of basic scientific discoveries to new therapies and products. Recent reports and news stories have, however, documented disturbing examples of relationships and practices that put at risk the integrity of medical research, the objectivity of professional education, the quality of patient care, the soundness of clinical practice guidelines, and the public's trust in medicine. Conflict of Interest in Medical Research, Education, and Practice provides a comprehensive look at conflict of interest in medicine. It offers principles to inform the design of policies to identify, limit, and manage conflicts of interest without damaging constructive collaboration with industry. It calls for both short-term actions and long-term commitments by institutions and individuals, including leaders of academic medical centers, professional societies, patient advocacy groups, government agencies, and drug, device, and pharmaceutical companies. Failure of the medical community to take convincing action on conflicts of interest invites additional legislative or regulatory measures that may be overly broad or unduly burdensome. Conflict of Interest in Medical Research, Education, and Practice makes several recommendations for strengthening conflict of interest policies and curbing relationships that create risks with little benefit. The book will serve as an invaluable resource for individuals and organizations committed to high ethical standards in all realms of medicine.

The Practice of Network Security Monitoring Sep 22 2020 Network security is not simply about building impenetrable walls—determined attackers will eventually overcome traditional defenses. The most effective computer security strategies integrate network security monitoring (NSM): the collection and analysis of data to help you detect and respond to intrusions. In The Practice of Network Security Monitoring, Mandiant CSO Richard Bejtlich shows you how to use NSM to add a robust layer of protection around your networks—no prior experience required. To help you avoid costly and inflexible solutions, he teaches you how to deploy, build, and run an NSM operation using open source software and vendor-neutral tools. You'll learn how to: -Determine where to deploy NSM platforms, and size them for the monitored networks -Deploy stand-alone or

distributed NSM installations -Use command line and graphical packet analysis tools, and NSM consoles -Interpret network evidence from server-side and client-side intrusions -Integrate threat intelligence into NSM software to identify sophisticated adversaries There's no foolproof way to keep attackers out of your network. But when they get in, you'll be prepared. The Practice of Network Security Monitoring will show you how to build a security net to detect, contain, and control them. Attacks are inevitable, but losing sensitive data shouldn't be.

Empathy and the Practice of Medicine Sep 15 2022 The book - which includes essays by physicians, philosophers, and a nurse - is divided into three parts: one deals with how empathy is weakened or lost during the course of medical education and suggests how to remedy this; another describes the historical and philosophical origins of empathy and provides arguments for and against it; and a third section offers compelling accounts of how physicians' empathy for their patients has affected their own lives and the lives of those in their care. We hear, for example, from a physician working in a hospice who relates the ways that the staff try to listen and respond to the needs of the dying; a scientist who interviews candidates for medical school and tells how qualities of empathy are undervalued by selection committees; a nurse who considers what nursing can teach physicians about empathy; another physician who ponders whether the desire to be empathic can hinder the detachment necessary for objective care; and several contributors who show how literature and art can help physicians to develop empathy.

The Practice of Learning Teams Dec 26 2020 Learning Teams from Dr Todd Conklin, PhD, are part of a way of looking at safety, quality and operational excellence differently by a facilitated approach to worker engagement and supporting the empowerment of people to own safety, quality or operational excellence. A Learning Team is notable because it encourages organizations to obtain and consider different perspectives and angles of functional diversity to define a problem in a group context. The different perspectives that emerge from a Learning Team group demonstrate that no one person holds all the knowledge needed to solve complex problems. A Learning Team involves facilitated engagement (using a facilitator) with workers to understand and then learn from the opportunities that are presented by: 1) Everyday successful and safe work (Everyday Learning Teams) 2) Events or incidents that could have or did harm workers (Event Learning Teams) 3) Introduction of changes (Management of change) that could affect worker safety (Periodic Learning Teams). Learning Teams support both worker learning and organizational learning by allowing the different stakeholder groups to understand better what, when, how, and why, people do things differently rather than following formal, written procedures or systems. By understanding what is necessary to make sure things go right, it is possible to focus on ensuring that factors which make things go right are present in the workplace every day. In the book Dr Todd Conklin states: "The Practice of Learning Teams will become a powerful resource in changing the way organizations learn and improve their operations. This book is easy to read and full of great concepts that can be used as soon as you read them. I love a book where you read an idea in the morning and try the same idea that very afternoon." This book has been written to act as a guide on how to: 1) Integrate Learning Teams into your organization 2) Improve worker learning and build critical thinking skills for workers in their everyday work 3) Improve organizational learning using Learning Teams 4) Become an effective Learning Teams facilitator by understanding what core capabilities and competencies are needed. Throughout this book, we will explore examples of applications of Learning Teams in safety, quality and operational excellence. As the reader, you will gain additional knowledge and understanding about Learning Teams in the context of: 1) The expected outcomes of a Learning Team 2) Where you are at and how you become an effective Learning Team facilitator 3) Learning about what makes a successful Learning Team 4) When you can use a Learning Team to build and improve worker knowledge 5) When you can use a Learning Team to build and improve organizational knowledge 6) An opportunity to see the different contexts in which a Learning Team can add value 7) Reflecting and learning from real-life experiences where Learning Teams have been successful, and considering the pitfalls that make them less effective.

The Practice Feb 20 2023 From the bestselling author of *Linchpin*, *Tribes*, and *The Dip* comes an elegant little book that will inspire artists, writers, and entrepreneurs to stretch and commit to putting their best work out into the world. Creative work doesn't come with a guarantee. But there is a pattern to who succeeds and who doesn't. And engaging in the consistent practice of its pursuit is the best way forward. Based on the breakthrough Akimbo workshop pioneered by legendary author Seth Godin, *The Practice* will help you get unstuck and find the courage to make and share creative work. Godin insists that writer's block is a myth, that consistency is far more important than authenticity, and that experiencing the imposter syndrome is a sign that you're a well-adjusted human. Most of all, he shows you what it takes to turn your passion from a private distraction to a productive contribution, the one you've been seeking to share all along. With this book as your guide, you'll learn to dance with your fear. To take the risks worth taking. And to embrace the empathy required to make work that contributes with authenticity and joy.

The Practice of Dzogchen Apr 29 2021 A classic collection of writings on the meditation practice and theory of Dzogchen, the Great Perfection, by the celebrated fourteenth-century scholar and adept Longchen Rabjam (Longchenpa). This classic collection of texts on the meditation practice and theory of Dzogchen presents the Great Perfection through the writings of its supreme authority, the fourteenth-century Tibetan scholar and visionary Longchen Rabjam. The pinnacle of Vajrayana practice in the Nyingma tradition of Tibetan Buddhism, Dzogchen embodies a system of training that awakens the intrinsic nature of the mind to reveal its original essence, utterly perfect and free from all duality—buddha nature, or buddhahood itself. In *The Practice of Dzogchen*, Tulku Thondup translates essential passages from Longchen Rabjam's voluminous writings to illuminate and clarify this teaching. He also draws on the works of later masters of the tradition, placing Dzogchen in context both in relation to other schools of Buddhism and in relation to the nine-vehicle outline of the Buddhist path described in the Nyingma tradition. This expanded edition includes *Counsel for Liberation*, Longchenpa's poetic exhortation to readers to quickly enter the path of liberation, the first step toward the summit of Dzogchen practice.

Coverage of digital data collection examines the use of online research tools. Quick-reference summaries include a table of research methods inside the front cover and a list of types of research syntheses (with definitions) inside the back cover. Helpful user resources are included with each new text purchase on the companion Evolve website and feature 400 interactive review questions along with a library of 10 full-text research articles.

The Practice of Eating Jun 12 2022 This book reconstructs and extends sociological approaches to the understanding of food consumption. It identifies new ways to approach the explanation of food choice and it develops new concepts which will help reshape and reorient common understandings. Leading sociologist of food, Alan Warde, deals both with abstract issues about theories of practice and substantive analyses of aspects of eating, demonstrating how theories of practice can be elaborated and systematically applied to the activity of eating. The book falls into two parts. The first part establishes a basis for a practice-theoretic account of eating. Warde reviews research on eating, introduces theories of practice and constructs eating as a scientific object. The second part develops key concepts for the analysis of eating as a practice, showing how concepts like habit, routine, embodiment, repetition and convention can be applied to explain how eating is organised and coordinated through the generation, reproduction and transformation of a multitude of individual performances. The Practice of Eating thus addresses both substantive problems concerning the explanation of food habits and currently controversial issues in social theory, illustrated by detailed empirical analysis of some aspects of contemporary culinary life. It will become required reading for students and scholars of food and consumption in a wide range of disciplines, from sociology, anthropology and cultural studies to food studies, culinary studies and nutrition science.

Outline of a Theory of Practice Feb 08 2022 Outline of a Theory of Practice is recognized as a major theoretical text on the foundations of anthropology and sociology. Pierre Bourdieu, a distinguished French anthropologist, develops a theory of practice which is simultaneously a critique of the methods and postures of social science and a general account of how human action should be understood. With his central concept of the habitus, the principle which negotiates between objective structures and practices, Bourdieu is able to transcend the dichotomies which have shaped theoretical thinking about the social world. The author draws on his fieldwork in Kabylia (Algeria) to illustrate his theoretical propositions. With detailed study of matrimonial strategies and the role of rite and myth, he analyses the dialectical process of the 'incorporation of structures' and the objectification of habitus, whereby social formations tend to reproduce themselves. A rigorous consistent materialist approach lays the foundations for a theory of symbolic capital and, through analysis of the different modes of domination, a theory of symbolic power.
