Professor Ailsa McKay, who was known not only for her work as a feminist economist but also her influence on Scottish social and economic policy, died in 2014 at the height of her academic career and impact on public life. Organised around the key themes of Ailsa McKay's work, this collection brings together eminent contributors to argue for the importance of making women's roles and needs more visible in economic and social policies. *Feminist Economics and Public Policy* presents a uniquely coherent analysis of key issues including gender mainstreaming, universal childcare provision and universal basic income security, in the context of today's challenging economic and political environments. It draws on international perspectives to look at the economic role of women, presenting readers with interrelated sections on gender budgeting and work and childcare, before concluding with a discussion on Citizens Basic Income and how it could contribute towards a more efficient, equitable social security system. The theoretical, empirical and practice based contributions assembled here present recommendations for more effective public policy, working towards a world in which women's diverse roles are recognized and fully accounted for. This book is a unique collection, which will be of great relevance to those studying gender and economics, as well as to researchers or policy makers. *Introduction to Clinical Engineering* focuses on the application of engineering practice within the healthcare delivery system, often defined as clinical engineering. What does it mean to be Muslim in Britain today? If the media is anything to go by, it has something to do with mosques, community leaders, whether you wear a veil, and what your views on religious extremists are. But as all our lives become increasingly entwined with our online presence, British Muslims are taking to social media to carve their own narratives and tell their own stories, challenging stereotypes along the way. Follow Me, Akhi explores how young Muslims in Britain are using the internet to determine their own religious identity, both within their communities and as part of the country they live in. Entering a world of

Muslim dating apps, social media influencers, online preachers, and LGBTQ and ex-Muslim groups, journalist Hussein Kesvani explores how British Islam has evolved into a multi-dimensional cultural identity that goes well beyond the confines of the mosque. He shows how a new generation of Muslims who have grown up in the internet age use blogs, vlogging, and tweets to define their religion on their terms -- something that could change the course of 'British Islam' forever. In this informative book, Annie Miller does not only explore the idea of basic income: she exhaustively explains what it is and what it would mean to implement, using extensive economic data. Miller starts off from a broad, existential position, outlining why the current system is no longer suitable for the times and needs to change. Her proposed solution is a society with BI, which she first outlines abstractly before diving into its internal workings, explaining who would be eligible for BI, what would happen to the rest of the welfare system, and other crucial details. Miller backs up her statements with substantive economic research and analysis. She ends with a section on how to achieve a society with BI, giving examples of pilot schemes elsewhere and discussing the politics behind implementation. Thus she brings the reader full circle from aspiring to a BI society, to seeing what it would take to reach it. Technology has revolutionised every aspect of our lives and how we learn is no exception. The trouble is; the range of elearning technologies and the options available can seem bewildering. Even those who are highly experienced in one aspect of elearning will lack knowledge in some other areas. Wouldn't it be great if you could access the hard-won knowledge, practical guidance and helpful tips of world-leading experts in these fields? Edited by Rob Hubbard and featuring chapters written by global elearning experts: Clive

Shepherd, Laura Overton, Jane Bozarth, Lars Hyland, Rob Hubbard, Julie Wedgwood, Jane Hart, Colin Steed, Clark Quinn, Ben Betts and Charles Jennings - this book is a practical guide to all the key topics in elearning, including: getting the business on board, building it yourself, learning management, blended, social, informal, mobile and game-based learning, facilitating online learning, making the most of memory and more. VAT and Government Departments is intended to be both a reference manual and a practical guide for those managing VAT in Government Departments, their advisers and key suppliers. Government Department VAT has recently been the subject of an HMRC consultation and review with new guidance published in 2015 (consolidated with revised NHS guidance), making this book timely. Public sector organisations must be registered for VAT where they engage in “economic activities”, especially where there is any competition with the private sector. There are special rules for Government Departments (and the NHS) under section 41 VAT Act 1994 known as the contracted-out services or COS rules (in relation to non-business activities) and Value Added Tax itself, governed by the VAT legislation (in relation to business activities). To understand VAT in a Government Department context it is essential to understand the fundamental duality in the tax in relation to the public sector. This is often overlooked and because in certain situations VAT can apparently be recovered in both contexts COS eligibility to recover and input tax entitlement on VAT incurred can be confused. Many of the areas covered in the text are complex in themselves and VAT and Government Departments does not attempt to examine all possibilities in all circumstances or to reproduce the full technical guidance or statute. The objective is to identify all of the issues in the tax relevant to Government Departments and in a logical analysis, explain these from a compliance perspective and in relation to the organisational activities of Government Departments (providing further references where appropriate if more detailed information is

required). VAT & Government Departments is based on published HMRC and Treasury guidance and policy and on current case law and legislation in force as at 30th April 2015. In First Do No Harm: Medical Ethics in International Humanitarian Law Sigrid Mehring provides a comprehensive overview of the legal and ethical framework guiding physicians in armed conflict. Due to its timeliness, the book is invaluable to practitioners and legal scholars alike. Parallel processing is a key topic which is becoming more important as the technology becomes more widespread. It was coordinated by the BCS Parallel Processing Specialist Group and provided a focus for both research and industrial presentations. The scope of the proceedings illustrates the breadth of the work being undertaken in the UK and includes a variety of papers covering a number of important areas, including: compiler development for both data-parallel and message passing languages and the development of application specific software. This handbook examines the development and use of manuals to guide and support systemic couples and family therapies. It addresses the process of manualizing, providing a secure base for therapist creativity rather than delineating prescriptive procedures. The volume addresses therapist and trainer concerns by demonstrating the value of sufficiently articulating clinical and teaching models to inform colleagues of what actually occurs during therapy. The book describes the history, value, and controversies of manuals. In addition, it explores issues and experiences in the creation of manuals, identifies research issues related to the use and evaluation of manuals, and addresses training as a context for the application of treatment manuals. Key areas of coverage include: Reports of experiences with major, internationally established manuals, formulations of innovative practices by their developers, and specifications of training programs. Discussion of the various formats of manuals, demonstrating their benefit and transportability across different contexts. Surveys of a broad selection of manuals, creating a flexible and diversified concept of what forms manuals may take. Essential guidance for using manuals, which is an indispensable step for the field to progress and to claim to health resource commissioning, governments and insurance agencies that the systemic practice is evidence based and effective. The Handbook of Systemic Approaches to Psychotherapy Manuals is an essential resource for researchers, professors, and graduate students as well as clinicians and related therapists and professionals in clinical psychology, family studies, public health, social work, psychotherapy, child and adolescent psychology and all interrelated disciplines. Petroleum taxation is the universal instrument through which governments seek to determine the crucial balance between the financial interests of the oil companies and the owners of the resource. This book addresses how governments have and continue to approach this problem,

the impacts of different policy choices and how these are being adapted to changing business conditions. Carole Nakhle presents the reader with an illuminating and robust analysis of the entire taxation story, from the basic theoretical considerations through to advanced computations applied to various tax regimes. Nakhle's main argument is that petroleum taxation is a subject of complexity, variety and subject to continued evolution, being surrounded and shaped by multifaceted geological, technical and market factors together with unpredictable political influences. The author challenges the assumption that perfect models of petroleum taxation can be designed and applied to countries and circumstances around the world, arguing that an ideal structure exists only in theory but can be nonetheless a useful benchmark against which to test proposed fiscal systems. Employment relations, much discussed in other industries, has often been neglected in professional sports despite its unique characteristics. The book aims to explore in detail the unique nature of the employment relationship in professional sports and the sport industry. Over 39 chapters

The Routledge Companion to British Cinema History offers a comprehensive and revisionist overview of British cinema as, on the one hand, a commercial entertainment industry and, on the other, a series of institutions centred on economics, funding and relations to government. Whereas most histories of British cinema focus on directors, stars, genres and themes, this Companion explores the forces enabling and constraining the films' production, distribution, exhibition, and reception contexts from the late nineteenth century to the present day. The contributors provide a wealth of empirical and archive-based scholarship that draws on insider perspectives of key film institutions and illuminates aspects of British film culture that have been neglected or marginalized, such as the watch committee system, the Eady Levy, the rise of the multiplex and film festivals. It also places emphasis on areas where scholarship has either been especially productive and influential, such as in early

and silent cinema, or promoted new approaches, such as audience and memory studies. This student text provides all the underpinning knowledge needed to pass the BTEC first diploma. It provides learning objectives to help the reader focus on what they need, up-to-date case studies and assessment activities to test the readers' knowledge and understanding. Emerging technologies have always played an important role in armed conflict. From the crossbow to cyber capabilities, technology that could be weaponized to create an advantage over an adversary has inevitably found its way into military arsenals for use in armed conflict. The weaponization of emerging technologies, however, raises challenging legal issues with respect to the law of armed conflict. As States continue to develop and exploit new technologies, how will the law of armed conflict address the use of these technologies on the battlefield? Is existing law sufficient to regulate new technologies, such as cyber capabilities, autonomous weapons systems, and artificial intelligence? Have emerging technologies fundamentally altered the way we should understand concepts such as law-of-war precautions and the principle of distinction? How can we ensure compliance and accountability in light of technological advancement? This volume of the Lieber Studies explores these critical questions while highlighting the legal challenges--and opportunities--presented by the use of emerging technologies on the battlefield. There is a growing evidence base that documents the social, environmental and economic benefits that urban trees can deliver. Trees are, however, under threat today as never before due to competition for space imposed by development, other hard infrastructures, increased pressure on the availability of financial provision from local authorities and a highly cautious approach to risk management in a modern litigious society. It is, therefore, incumbent upon all of us in construction and urban design disciplines to pursue a set of goals that not only preserve existing trees where we can, but also ensure that new plantings are appropriately

specified and detailed to enable their successful establishment and growth to productive maturity. Aimed at developers, urban planners, urban designers, landscape architects and arboriculturists, this book takes a candid look at the benefits that trees provide alongside the threats that are eliminating them from our towns and cities. It takes a simple, applied approach that explores a combination of science and practical experience to help ensure a pragmatic and reasoned approach to decision-making in terms of tree selection, specification, placement and establishment. In this way, trees can successfully be incorporated within our urban landscapes, so that we can continue to reap the benefits they provide. When Islamic State (ISIS) forces were driven out of the territories they had acquired in Syria and Iraq, there remained a concern that the threat posed by ISIS was far from over. It was clear that significant long-term strategies would be needed to establish and maintain security and stability if the potential for further radical Islamist threats in the Middle East and among NATO countries was to be eradicated. This book presents papers from the NATO Advanced Research Workshop (ARW) entitled *The Post ISIS-Era: Regional and Global Implications*, held in Washington DC, USA, from 6-8 September 2019. The ARW brought together participants from NATO member nations and Partner countries, and from diverse backgrounds, including academia, security, law enforcement, intelligence, military, foreign affairs, media, think tanks, international organizations and embassies. Topics covered included: the future of ISIS after the loss of its territories; maintaining security and stability; analysis of ISIS recruitment and propaganda activities; the returnee problem and the plight of refugees; the processes of radicalization; response to the changing nature of violent extremism; policy recommendations to mitigate the consequences of new threats; and dealing with the exploitation of public fear of terrorism. The book also discusses how the lessons learned can be implemented, and offers specific policy recommendations for the

future. It will be of interest to all those involved in combating the international terror threat. This book contains contact information for business, trade and jobs in most countries particularly the big ones: United States China Japan Germany United Kingdom Canada France India There are a lot of free trade agreements like NAFTA (North America Free Trade Agreement) and GATT (General Agreement on Trades and Tariffs) which has made free trade easy, especially among the members of the WTO but there is still paperwork involved when bringing commercial goods across borders because many countries put forth the idea or illusion that they're protecting their economies from world trade but in truth we're a globalized world. There is only one country called the world. It gets more interdependent everyday. China doesn't want a war with United States because they owe them a lot of money which would immediately be nullified if war is declared. I just heard on the news that this month's trade deficit for the U.S. IS 80 billion dollars. That's 80 billion dollars more of stuff coming in than going out. As I say below, I lived through the pre-free trade days. There was a time when we were prosperous when we made most of the things we used. Young people nowadays don't have an idea of a golden age when you could get a job pretty well anywhere you wanted because there were factories all over the place.
