Holloman High Speed Test Track Design Manual May 22 2020  
The design of rocket sleds requires the engineer to evaluate complex loads and numerous load conditions which are imposed on the sleds as they travel along the track. This manual represents the combined effort of many Test Track engineers. In essence they have tried to document the current sled design practices that have led to successful sled tests. This manual along with more current technical investigations and reports serve as a guide for designing sleds and sled tests. While this design manual provides adequate design guidance for most typical efforts, it can not cover all the possible scenarios. Because many of the design practices are based

experience rather than purely a scientific approach, the Flight Chief and senior Track Management take the prerogative to approve deviation from the guidelines stated in this design manual on a case-by-case basis based on their engineering knowledge and vast sled test experience.

It presents the more concrete and obvious wildlife signs for some 160 animals and teams them with a host of seemingly unrelated details to give a comprehensive picture of recent and not-so-recent – traffic through the bush. Simple, bullet-point text guides readers through the key points and teaches the broad-based observational skills required to detect and interpret messages; multiple photographs, some annotated, along with accurate track drawings for all the animals, offer a clear visual guide too.
