Excerpt: A microwave oven, often colloquially shortened to microwave, is a kitchen appliance that heats food by bombarding it with electromagnetic radiation in the microwave spectrum causing polarized molecules in the food to rotate and build up thermal energy in a process known as dielectric heating. Microwave ovens heat foods quickly and efficiently because excitation is fairly uniform in the outer of a dense (high water content) food item; food is more evenly heated throughout (except in thick, dense objects) than generally occurs in other cooking techniques. "Cleaning is the most

boring, pointless way to spend your time that ever existed," writes author Mary McHugh. Just think of all the wonderful things you could be doing instead: You could be learning to play the clarinet. You could plant a lilac bush. You could be riding a motorcycle down Main Street. And although the house, your clothes, the children, and dog have to be cleaned sometime, *Clean This!* shows you how to get the cleaning done with the least amount of effort: Lots of children love to vacuum. Exploit this fact. If you never cook, you never have to clean up. Two very good things. Polish your floors by skating across them in your bunny slippers. Anyone who has ever pushed a broom, washed a dish, or scrubbed a toilet will welcome McHugh's tongue-in-cheek advice. Artist Adrienne Hartman's cheerful illustrations help alleviate any lingering guilt from the mess. So put down the broom and let the dust bunnies multiply. Remember, nobody ever changed the world by cleaning a bathroom! Drawing on the knowledge of more than two hundred experts, this reference offers advice on cleaning, removing problem spots, saving money, and developing efficient cleaning methods. The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics. Longing for a kinder, gentler world? As the old saying goes, everything begins at home, and odds are, if you live in the all-American household, the air inside is more toxic than the air outside, even if you live in the most polluted of cities. You regularly handle the filthiest object in your home -- the kitchen sponge -- and put the same chemicals on your face that are used in brake fluid and antifreeze. The cleaning agents and personal care products commonly marketed to and used in American homes contain not only some very dangerous, toxic chemicals, but they also create an "overly clean," chemically bombed-out house that compromises immune systems. And with more than fifty million Americans suffering from allergies and other autoimmune diseases -- not to mention the developing and fragile immune systems of

children and seniors -- large numbers of people are actually being made sicker and sicker by their homes. Learn to live a clean, healthy, more economical way with Ellen Sandbeck, the nontoxic avenger. In this must-have book for the twenty-first-century home, this passionate, witty advocate of all things organic will teach you how to maintain every part of the home -- from living room to septic tank, kitchen floor to bathroom sink -- using safe, simple cleansers and quick preventative measures as well as the most effective organic products on the market to get the job done. Learn time-saving, preventative housekeeping, such as taking thirty seconds to clean the shower while you shower. Take care of bathroom stains with baking soda and vinegar rather than commercial, toxic bathroom "bombs" peddled to you with such force by manufacturers. Need whiter whites? There is no bleaching power on earth stronger than the sun. Snow clean your fine rugs. Choose fruits and vegetables from the relatively pesticide residue-free list. Clean felt-tipped pen stains with vodka. Make furniture shine with olive oil and lemon. Your house will also smell as great as it looks.
