Winding it Back Apr 23 2020 'Winding it Back' provides multiple access points and adequate learning conditions while honouring the individual needs of all students in music classrooms.

Individual differences in early instructed language learning Jan 21 2020 Variability in predispositions for language learning has attracted scholarly curiosity for over 100 years. Despite major changes in theoretical explanations and foreign/second language teaching paradigms, some patterns of associations between predispositions and learning outcomes seem timelessly robust. This book discusses evidence from a research project investigating individual differences in a wide variety of domains, ranging from language aptitude over general cognitive abilities to motivational and other affective and social constructs. The focus lies on young learners aged 10 to 12, a less frequently investigated age in aptitude research. The data stem from two samples of multilingual learners in German-speaking Switzerland. The target languages are French and English. The chapters of the book offer two complementary perspectives on the topic: On the one hand, cross-sectional investigations of the underlying structure of these individual differences and their association with the target languages are discussed. Drawing on factor analytical and multivariable analyses, the different components are scrutinized with respect to their mutual dependence and their relative impact on target language skills. The analyses also take into account contextual factors such as the learners' family background and differences across the two contexts investigated. On the other hand, the potential to predict learner's skills in the target language over time based on the many different indicators is investigated using machine learning algorithms. The results provide new insights into the stability of the individual dispositions, on the impact of contextual variables, and on empirically robust dimensions within the array of variables tested.

Students of Color and the Achievement Gap Sep 28 2020 Students of Color and the Achievement Gap is a comprehensive, landmark analysis of an incontrovertible racialized reality in U.S. K-12 public education--the relentless achievement gap between low-socioeconomic students of color and their economically advantaged White counterparts. Award winning author and scholar Richard Valencia provides an authoritative and systemic treatment of the achievement gap, focusing on Black and Latino/Latina students. He examines the societal and educational factors that help to create and maintain the achievement gap by drawing from critical race theory, an asset-based perspective and a systemic inequality approach. By showing how racialized opportunity structures in society and schools ultimately result in racialized patterns of academic achievement in schools, Valencia shows how the various indicators of the achievement gap are actually symptoms of the societal and school quality gaps. Following each of these concerns, Valencia provides a number of reform suggestions that can lead to systemic transformations of K-12 education. Students of Color and the Achievement Gap makes a persuasive and well documented case that school success for students of color, and the empowerment of their parents, can only be fully understood and realized when contextualized within broader political, economic, and cultural frameworks.

Pacific Rim Objective Measurement Symposium (PROMS) 2012 Conference Proceeding Aug 08 2021 Entrusted by the Board of Management of the Pacific Rim Objective Measurement Symposium (PROMS), PROMS2012 is held in Jiaxing, China from August 6-9, 2012. Over the past years, PROMS has been hosted in many parts of the Pacific Rim, in Singapore, Malaysia, Hong Kong, Taiwan and Tokyo, which has greatly promoted the research of and contributed to the development of Rasch Model in one way or another. As early as in 1980s, the ideas and concepts regarding IRT was first introduced into China by Prof. Gui Shichun, my Ph.D supervisor, and it is Prof. Gui who first conducted with great success the ten-year long (1990-1999) Equating Project for Matriculation English Test (MET) in China. MET is the most influential entrance examination for higher education administered annually to over 3.3 million candidates then. The Equating Project won recognition by Charles Alderson and other foreign counterparts during 1990s. Academically, those were Good Old Days for Chinese testing experts and psychometricians. Then for certain reasons, the equating practice abruptly discontinued. Therefore, in China nowadays, the application of IRT-based software like BILOG, Parscale, Itean 4 and others to real testing problem solving is confined to an extremely small 'band' of people. In this sense, PROMS2012 meets an important need in that it provides

an excellent introduction of IRT and its application. And anyone who is seriously interested in research and development in the field of psychometrics or language testing will find such a symposium and related workshops to be an excellent source of information about the application of Rasch Model. PROMS2012 focuses on recent advances in objective measurement and provides an international forum on both the latest research in using Rasch measurement and non-Rasch practice.

[Sensitive periods, language aptitude, and ultimate L2 attainment](#) Nov 30 2020 Research on second language acquisition (SLA) has identified language aptitude and age of onset (AO), i.e., the age at which learners are first meaningfully exposed to the L2, as robust predictors of rate of classroom language learning and level of ultimate L2 attainment in naturalistic settings, respectively. It is not surprising, therefore, that recent years have witnessed a surge of interest in the combination of age and aptitude as a powerful explanatory factor in SLA, and central to a viable SLA theory. The chapters in this volume provide new studies and reviews of research findings on age effects, bilingualism effects, maturational constraints and sensitive periods in SLA, the sub-components of language aptitude and the development of new aptitude measures, the influence of AO and aptitude in combination on SLA, aptitude-treatment interactions, and the implications of the research findings for language education policy and tailored language instruction.

Private Regulation and the Internal Market Aug 28 2020 How does EU internal market law, in particular the rules on free movement and competition, apply to private regulation? What issues arise if a bar association were to regulate advertising; when a voluntary product standard impedes trade; or when a sporting body restricts the cross-border transfer of a football player? Covering the EU's free movement and competition rules from a general and sector-specific angle, focusing specifically on the legal profession, standard-setting, and sports, this book is the first systematic study of EU economic law in areas where private regulation is both important and legally controversial. Mislav Mataija discusses how the interpretation of both free movement and competition rule adapts to the rise of private regulation, and examines the diminishing relevance of the public/private distinction. As private regulators take on increasingly important tasks, the legal scrutiny over their measures becomes broader and moves towards what Mataija describes as 'regulatory autonomy.' This approach broadly disciplines, but also recognizes the legitimacy of private regulators; granting them an explicit margin of discretion and focusing on governance and process considerations rather than on their impact on trade and competition. The book also demonstrates how the application of EU internal market law fits in the context of strategic attempts by the EU institutions to negotiate substantive reforms in areas where private regulation is pervasive. Surveying recent case law of the Court of Justice of the European Union and the practice of the European Commission, Mataija demonstrates how EU internal market law is used as a control mechanism over private regulators.

[Second Language Learning Theories](#) Jun 25 2020 Second Language Learning Theories is a clear and concise overview of the field of second language acquisition (SLA) theories. Written by a team of leading academics working in different SLA specialisms, this book provides expert analysis of the main theories from multiple perspectives to offer a broad and balanced introduction to the topic. The book covers all the main theoretical perspectives currently active in the SLA field and sets them in a broader perspective per chapter, e.g. linguistic, cognitive or sociolinguistic. Each chapter examines how various theories view language, the learner, and the acquisition process. Summaries of key studies and examples of data relating to a variety of languages illustrate the different theoretical perspectives. Each chapter concludes with an evaluative summary of the theories discussed. This third edition has been thoroughly updated to reflect the very latest research in the field of SLA. Key features include: a fully re-worked chapter on cognitive models of language and language learning a new chapter on information processing, including the roles of different types of memory and knowledge in language learning the addition of a glossary of key linguistic terms to help the non-specialist a new timeline of second language learning theory development This third edition takes account of the significant developments that have taken place in the field in recent years. Highly active domains in which theoretical and methodological advances have been made are treated in more depth to ensure that this new edition of Second Language Learning Theories remains as fresh and relevant as ever.

Essential Topics in Applied Linguistics and Multilingualism Nov 18 2019 This book brings together papers dealing with essential issues in applied linguistics and multilingualism that have been contributed by leading figures in these two fields and present state-of-the-art developments in theory and research. The first part includes articles touching on various aspects of multiple-language acquisition, with a particular emphasis on the role of affordances, the interfaces between language and thought, and factors influencing the process of language learning. Part Two deals with individual variations in the acquisition of additional languages, focusing in particular on the impact of such variables as age, aptitude, motivation and learning deficits. Finally, Part Three presents contributions illuminating key issues in the acquisition of different subsystems and skills, such as grammar, phonology, lexis and writing systems. Thanks to the diversity of perspectives on applied linguistics and multilingualism, as well as the cutting-edge nature of some of the proposals, this edited collection will be an important reference work and a source of inspiration for theorists and researchers.

PEDIATRIC MUSIC THERAPY Dec 20 2019 The book includes relevant medical, psychological, and developmental information to help service providers and parents to understand children with disabilities. In this revised edition, the author has updated or eliminated some of the medical information and added more related music therapy literature. This book can be used as a valuable handbook for clinicians. Also, it may be used as a primary or supplemental textbook in classes to prepare music therapy students to work with children who have disabilities. All music therapy students who complete an undergraduate curriculum should know the characteristics and common needs of the major disabilities discussed in this book. In addition, class work and clinical experiences must include basic techniques and materials used to accomplish the goals and objectives set for each child. This is addressed in a manner that will be useful to all personnel working with children with disabilities.The first two chapters describe the process of assessment and delineation of goals in music therapy, which leads to the design of the music therapy portion of the IEP or care plan. Subsequent evaluation allows progress to be stated objectively. The remaining chapters describe each population of children to be served, with emphasis on medical and psychological characteristics unique to each population, and specific goals and procedures to be used in music therapy. The CAMEOS model is used in this book to address the child's Communication, Academic, Motor, Emotional, Organizational, and Social needs and ways these may be addressed through music therapy. Whether the child is homebound, included in regular classes, seen in a resource room or special education program, or in hospital care, he/she has needs that can be described within the CAMEOS model. Music therapy may provide service in each of these areas.
