In countries such as the UK, the energy used in constructing, occupying and operating buildings represents approximately 50% of greenhouse gas emissions. Pressure to improve the environmental performance of buildings during both construction and occupancy, particularly to reduce carbon emissions from buildings, has become intense. Understandably, legislation and regulation are driving green development and compliance. And this is happening in a wide variety of ways. This review of the law in key jurisdictions for the research community, lawyers, the construction industry and government examines some of the mechanisms in place " from the more traditional building regulation controls to green leases and the law relating to buildings and their natural environment. Members of the CIB TG69 research group on Green Buildings and the Law " review aspects of the law relating to green development in a range of jurisdictions. Over a half century of exploration of the Earth's space environment, it has become evident that the

interaction between the ionosphere and the magnetosphere plays a dominant role in the evolution and dynamics of magnetospheric plasmas and fields. Interestingly, it was recently discovered that this same interaction is of fundamental importance at other planets and moons throughout the solar system. Based on papers presented at an interdisciplinary AGU Chapman Conference at Yosemite National Park in February 2014, this volume provides an intellectual and visual journey through our exploration and discovery of the paradigm-changing role that the ionosphere plays in determining the filling and dynamics of Earth and planetary environments. The 2014 Chapman conference marks the 40th anniversary of the initial magnetosphere-ionosphere coupling conference at Yosemite in 1974, and thus gives a four decade perspective of the progress of space science research in understanding these fundamental coupling processes. Digital video links to an online archive containing both the 1974 and 2014 meetings are presented throughout this volume for use as an historical resource by the international heliophysics and planetary science communities. Topics covered in this volume include: Ionosphere as a source of magnetospheric plasma Effects of the low energy ionospheric plasma on the stability and creation of the more energetic plasmas The unified global modeling of the

Seminar paper from the year 2014 in the subject Business economics - Accounting and Taxes, grade: 1,0, Catholic University Eichstätt-Ingolstadt (WFI), language: English, abstract: This paper analyses the effect of Hofstede's cultural dimensions on earnings management on 433 firms in 18 european countries, all reporting under IFRS. The results of multivariate regression reveal that only one cultural variable, namely Power Distance, has a significant effect on earnings management measured by discretionary accruals. In contrast, the scores for Individualism and

Masculinity have no significant influence. These findings suggest that culture still has an influence on earnings management as suggested by previous studies, but is diminishing due to international accounting harmonization.
