The Dory Book Mar 17 2020 The dory has seen duty as a fishing boat, lumberman's batteau, lifeboat, recreational rowing boat, and racing sailboat. The most comprehensive book about dories ever published, this is at once a history of the dory, a practical handbook on dory building, and a compendium of 23 dory designs with full construction details. The author, a longtime contributor to National Fisherman, and the illustrator, Sam Manning, are perhaps the foremost experts on the subject. A steady stream of letters and photographs to the late John Gardner from successful dory builders worldwide has been testimony to the widespread popularity and influence of this book.

Shut Away! Dec 14 2019 Rod Lyon, former Grand Bard of the Gorseth Kernow, recalls his early days fishing out of Newquay, "in the days before modern electronic aids, man-made fibre ropes, twines and cords, plastic 'skins' and floats instead of cork ...when navigation to and from the gear was by dead reckoning, using only a watch and a compass, with only experience telling you what to allow for with the tide." Rod illustrates, in both words and pictures, the techniques and the equipment used in those bygone days, and along the way remembers some of the more notable characters, both Cornish and Breton, who frequented 'Down Quay'. The book also includes a gazetteer of his favourite fishing grounds.

The Outboard Boater's Handbook: Advanced Seamanship and Practical Skills Sep 15 2022 This comprehensive manual shows you how to go places and do things you never thought possible in a small outboard motorboat. A well-designed ruggedly built 17-footer, for instance, can fish offshore, circumnavigate Lake Superior, and crisscross the continent on inland waterways or on a trailer pulled by the family car. Small outboards are among the most versatile boats ever developed and are far more able than you might expect. Covered here are all the popular types--and some exciting alternatives as well as methods that may change your entire boating outlook. Aided by contributions from other experts, veteran outboard skipper David R. Getchell, Sr., offers a wealth of useful facts and special savvy that reveal for the first time in a single book the true potential of these democratic boats 20 feet and under. Here are the means to understand what can be done, and the way to do it safely, including: how to judge a boat's potential and capabilities based on design and construction; how to rebuild an older boat; how to handle a little boat in big seas, surf, or shallow water; how to navigate; how to read the weather; how to head

upriver or offshore; how to trailer your boat; how to manage and equip it for camp cruising on a nearby lake or for subarctic exploration; and how to care for the boat and motor.

The Water-Energy Nexus in the American West Nov 12 2019 The nexus between water and energy raises a set of public policy questions that go far beyond water and energy. Economic vitality and management of scarce and precious resources are at stake. This book contributes to the body of knowledge and understanding regarding water, energy, and the links between the two in the American West and beyond. The research and analyses presented by the authors shed new light on the choices that must be made in order to avoid unnecessary harm in the development and management of water and energy systems to meet public needs in an ever changing environmental and economic climate. Indeed, the book shows, thoughtfully designed new technologies and approaches can help restore damaged environments and provide a range of benefits. The focus is the American West, but many of the lessons are global in their applicability. After a broad, stage-setting introductory section, the volume looks first at the use of water for energy production and then follows with chapters on the role of energy in water projects. The final section looks at the way forward, providing cases and recommendations for better, more efficient linkages in the water-energy nexus. Students and researchers in economics, public policy, environmental studies and law along with planners and policymakers will find this accessible and very current volume invaluable.

Selling the Sea, Fishing for Power Jan 19 2023 This book is an ethnographic study of several coastal communities in the Kei Islands of eastern Indonesia. Central to Dr. Adhuri's argument is an insistence that systems of local marine resource management cannot be studied on their own, in isolation from either the complex cultural and historical conditions that give impetus to community action or from the equally complex regional and national contexts within which such action is undertaken.

The Singer Story Jan 15 2020 Here is the definitive history of one of Britain's oldest, most important and influential car manufacturers. George Singer started building bicycles in Coventry in 1874 and by 1905 his company was building cars and motorcycles too. Later the company would concentrate on the manufacture of cars and commercial vehicles, bringing great success in sales and motorsport until, in the early 1950s, things began to go wrong. By 1955 Singer was absorbed into the Rootes Group and slowly lost its distinctive identity. In 1970 the last car to carry a Singer badge was built - marking the end of the great Coventry marque and hammering another nail into the coffin of Britain's once great motor industry. Thoroughly researched and with over 300 photos this is an important piece of automotive history.

Windship Technology Oct 04 2021 Windship Technology, Part A contains the proceedings of the International Symposium on Windship Technology (WINDTECH '85), held at the University of Southampton, England, on April 24-25, 1985. The symposium provided a forum for discussing developments in windship technology, including the use of calculation methods to analyze wind propulsion on cargo ships and weather routing for wind-assisted ships. Measurements of the comparative performance of sailing rigs are also presented. Comprised of 17 chapters, this volume begins by tracing the revival of serious interest in the possible use of the wind in ship propulsion over the past decade, and giving examples of the wide range of rigs that have been developed and are now installed on ships. The reader is then introduced to Project INDOSAIL intended to develop cargo sailing vessels for the Indonesian inter-island trade. Subsequent chapters focus on sail-assist developments from 1979 to 1984;

economic aspects of the application of additional sail power on small German fishing vessels; sail retrofit on inter-island vessels in Fiji; and the aerodynamics of a triangular jib-and-boom combination. The book concludes with an evaluation of two-dimensional sail shape determined by pressure and its tension. This book will appeal to government officials, academics, ship owners, and other parties with an interest in windship technology.
