In developing countries macroeconomic volatility is common, and severe negative economic shocks can substantially increase poverty and food insecurity. Less well understood are the implications of these contractions for child acute malnutrition (wasting), a major risk factor for under-5 mortality. This study explores the nutritional impacts of growth shocks over 1990-2018 by linking wasting outcomes collected for 1.256 million children

from 52 countries to lagged annual changes in national income. Difference-in-difference estimates suggest that a 10% annual decline in national income increases moderate/severe (WHZ<-2) and severe wasting (WHZ<-3) by 14 and 22 percent. An exploration of possible mechanisms suggests negative economic shocks increase risks of diarrhea, fever, and maternal underweight prevalence, and reduce child dietary diversity. Applying these results to the predicted economic impacts of COVID-19 suggests that millions of pre-school children are at increased risk of wasting and wasting-related morbidity and mortality unless urgent preventative action is taken.

Fundamentals of Preparative and Nonlinear Chromatography, Second Edition is devoted to the fundamentals of a new process of purification or extraction of chemicals or proteins widely used in the pharmaceutical industry and in preparative chromatography. This process permits the preparation of extremely pure compounds satisfying the requests of the US Food and Drug Administration. The book describes the fundamentals of thermodynamics, mass transfer kinetics, and flow through porous media that are relevant to chromatography. It presents the models used in chromatography and their solutions, discusses the applications made, describes the different processes used, their numerous applications, and the methods of optimization of the experimental conditions of this process. After a century of research, several lines of evidence now indicate that the ability of adenosine to directly control inflammatory cells has a major impact on the functions of the inflammatory and immune systems. Consequently, many promising therapeutic approaches are beginning to emerge that focus on the modulation of adenosine, including the development of compounds that interfere with the breakdown of adenosine, as well as specific agonists and antagonists of various adenosine subtypes. Some of these compounds have already entered clinical trials. While information on the role of adenosine is growing rapidly, until now it has

remained scattered in the literature. Edited by three pioneering researchers in the field, *Adenosine Receptors: Therapeutic Aspects for Inflammatory and Immune Diseases* presents the first single volume compilation of reviews on how adenosine, acting on its cellular receptors, regulates immune responses. The book is organized to provide the reader with a general overview of adenosine receptors, delving into molecular biology, cell biology, and pharmacology. Separate chapters focus on the role of adenosine receptors in regulating the function of the various cell types that are involved in immune responses. Further chapters delineate the role of purinergic signaling in the pathophysiology of a variety of disease states associated with an overzealous or insufficient immune response. These include autoimmune diseases, asthma, atherosclerosis, ischemia-reperfusion injury, and cancer. Much of the methodology and findings documented in this text may well lead to new therapeutic modalities for pathologies such as ischemia and reperfusion, heart disease, wound healing, tumors, pain, and a variety of central nervous system diseases including Parkinson's, Alzheimer's, and epilepsy, as well as mood and sleep disorders. This resource provides background and direction for those researchers entering the field of adenosine and inflammatory disease, and provides a comprehensive reference for experienced investigators. This paper quantifies the effects of external risks for Peru, with particular attention to two major external risks, China's investment slowdown and the U.S. monetary policy tightening. In particular, a macroeconomic model for a small open and partially dollarized economy is developed and estimated for Peru to measure the risk spillovers, and simulate domestic macroeconomic responses in different scenarios with these two external risks. The simulation results suggest that Peru's output is vulnerable to both risks, particularly the U.S. monetary policy tightening. Simulations also highlight the importance of higher exchange rate flexibility and a lower degree of dollarization, which

could help mitigate the negative spillover effects of these external risks. While it may appear that the nervous and immune systems exist as two separate entities, groundbreaking observations have positively identified anatomic connections between elements of the nervous system and cells of adaptive immunity. Building on this research, *Autonomic Neuroimmunology* presents a scientific discussion of the current understanding of these vital neuroimmunological interactions and their implications for normal psychology and disease states. Contributors document the cell biological mechanisms for the neuropeptide activation of mast cells, and analyze how one or more adrenergic and peptidergic messengers modulate immunity. They also explain the pathways by which cholinergic factors may suppress immunological inflammation. The potential implications of organ system-selective neuroimmunology for host defense and diseases are thoroughly discussed for the skin, the intestines, the bladder, and the lungs. With modern neuroimmunology now firmly established as a scientific discipline, this volume supports this promising science as a pathway to novel diagnostic and therapeutic techniques for diseases of the neural, immune, and endocrine systems. Considers the phenomenon of the high inflation processes of the 1970s and 1980s as exemplified by Argentina, Brazil and Israel. The author examines common characteristics of such processes and their possible cures, focusing on the Israeli experience of the political economy of stabilization. This book constitutes the refereed proceedings of the 4th International Workshop on Visual Form, IWVF-4, held in Capri, Italy, in May 2001. The 66 revised full papers presented together with seven invited papers were carefully reviewed and selected from 117 submissions. The book covers theoretical and applicative aspects of visual form processing. The papers are organized in topical sections on representation, analysis, recognition, modelling and retrieval, and applications. Fully revised and updated, and including brand new problems and

numerical examples, the new edition of 'Foundations of modern macroeconomics: exercise and solutions manual' uses worked example models to enable self-study and to allow the reader to derive conclusions regarding macroeconomic phenomena. Complete with a range of problems with varying degrees of difficulty, it provides solutions, hints, and tips, allowing the diligent reader to not only solve models, but to begin to formulate their own."--Back cover Hemorrhagic Shock: New Insights for the Healthcare Professional: 2013 Edition is a ScholarlyPaper™ that delivers timely, authoritative, and intensively focused information about Additional Research in a compact format. Barely two decades after the Asian financial crisis Asia was suddenly confronted with multiple challenges originating outside the region: the 2008 global financial crisis, the European debt crisis, and finally developed economies' implementation of unconventional monetary policies. The implementation of quantitative easing, ultra-low interest rate policies, and negative interest rate policies by a number of large central banks has given rise to concerns over financial stability and international capital flows. Macroeconomic Shocks and

Unconventional Monetary Policy: Impacts on Emerging Markets explains how shocks stemming from the global financial crisis have affected macroeconomic and financial stability in emerging Asia. Macroeconomic Shocks and Unconventional Monetary Policy: Impacts on Emerging Markets brings together the most up-to-date knowledge impacts of recent macroeconomic shocks on Asia's real economy; the spillover effects of macroeconomic shocks on financial markets and flows in Asia; and key challenges for monetary, exchange rate, trade and macro prudential policies of developing Asian economies. It is authored by experts in the field of international macroeconomics from leading academic institutions, central banks, and international organizations including the International Monetary Fund, the Bank for International Settlement, and the Asian Development Bank Institute. This text examines the interaction between blast pressure and surface or underground structures, whether the blast is from civilian, military, dust and natural explosions, or any other source. This proceedings volume of the Challenging Glass 4 & COST Action TU0905 Final Conference, held 6-7 February 2014 at the EPFL in Lausanne, Switzerland, represents the Final Action Publication of the European research network COST Action TU0905 "Structural Glass - Novel design methods and next generation products". It contains nearly 100 peer-reviewed papers - published by more than 180 authors from 22 different countries - that focus on the architectural and structural applications of glass in structures and facades. As such, it provides a profound state-of-the-art of structural glass design and engineering. A must-read for all architects, engineers, scientists, industry partners and other enthusiasts interested in this rapidly evolving and challenging domain. This collection of over 200 papers from the 9th Biennial Worldwide Congress on Refractories is broad-ranging and diverse in perspective. Topics include steelmaking refractories, castable technology, global refractories education and technology and industrial applications. Numerous

papers are from representatives from major international steel companies. Nigeria's 2005 Article IV Consultation reports that the authorities made good progress in implementing their structural reform program. Given favorable terms of trade, gross international reserves are projected to increase substantially. The economy is expected to benefit from improved infrastructure and policy initiatives aimed at spurring non-oil GDP growth, and removal of distortions. The medium-term outlook hinges on the government's ability to consolidate the progress it has made in macroeconomic stability, strengthen public expenditure management, and progress significantly in implementing structural reforms.

This 2017 Article IV Consultation highlights that the macroeconomic conditions have recently deteriorated in Swaziland. In 2016, two shocks—a prolonged drought and a sharp decline in South African Customs Union (SACU) receipts—severely hit the economy, while an expansionary fiscal policy worsened fiscal and external balances.

Growth in 2016 stagnated, as agricultural productions declined, and headline inflation increased sharply, mostly owing to rising food prices. Fiscal policy remains on an expansionary course, while the monetary stance has tightened. Despite a pickup in SACU revenue, the 2017 budget envisages a continuation of large fiscal deficits, and further increase in public debt. Recent international economic events have demonstrated the vulnerability of individual countries to external disturbances, or 'shocks'. Such disturbances necessitate major adjustments to developing countries' trade behaviour, and therefore also to their domestic economies. This volume is an integrated theoretical and econometric study of the impact of global economic changes on the developing Turkish economy during the period 1970-1983. Structural adjustment is defined and presented in the context of a small open economy reacting to external shocks. The interaction of government and private sector is incorporated explicitly in an intertemporal model through examination of dynamic game equilibria, and the implications of this interaction for the effectiveness of stabilization and liberalization policies are explored. This theoretical structure provides the structure for macroeconomic estimation. The estimated model then is employed for an econometric decomposition of Turkish historical economic experience into portions due to various external shocks and government policy changes. The theoretical section demonstrates the necessity of consideration of government/private interactions when measuring and evaluating structural adjustment policies. The econometric results confirm the importance of such analysis for Turkey, and provide evidence of the impact of various government policies on aggregate consumption, investment, inflation and current account deficits. This book will be of use to both international and development economists as a systematic and insightful examination of structural adjustment in Turkey, as well as a template for similar analyses for other open economies. This book is a translation of the original German 11th edition *Grundzüge der Strömungslehre* by Jürgen Zierep & Karl Bühler, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2018. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors. *The Secret Agent* (1907) is a compelling tale of espionage and terrorism set in Edwardian London. Ironically subtitled 'A Simple Tale', it paints a terrifying portrait of revolutionaries and anarchists whose personal lives are as barren and futile as their public acts of violence. It concludes with the unwitting accomplice of a would-be terrorist blowing himself to bits with his own bomb, the terrorist's subsequent murder by his own wife, and the wife's own suicide. This new edition is based on a painstaking comparison of the original manuscript of the work with its first, truncated appearance in the American magazine *Ridgeway's: A Militant Weekly for God and Country*, and with all subsequent book-form publications overseen by Conrad himself. The result is a new text,

purged of the printers' errors and editorial interventions that have been reproduced in all previous printings. There is also a critical introduction, an essay on the text, a textual apparatus, and helpful explanatory notes. This book presents a bibliographical review of the use of Bayesian networks in reliability over the last decade. Bayesian network (BN) is considered to be one of the most powerful models in probabilistic knowledge representation and inference, and it is increasingly used in the field of reliability. After focusing on the engineering systems, the book subsequently discusses twelve important issues in the BN-based reliability methodologies, such as BN structure modeling, BN parameter modeling, BN inference, validation, and verification. As such, it is a valuable resource for researchers and practitioners in the field of reliability engineering. This report of the evaluation study provides a greater focus on measuring the impact of the larger Takaful program and also attempts to measure the impact

of the much smaller Karama program. In addition, IFPRI will conduct a qualitative assessment of the Takaful and Karama program focused on learning about the experience with the program among the poorest beneficiary households. This qualitative assessment will also draw lessons from the quantitative survey to provide another report on the experience of very poor households. The remainder of this report is organized as follows Chapter 2 provides an overview of the Takaful and Karama Program. Chapter 3 summarizes the impact evaluation design. Chapter 4 describes the evaluation survey and sample. Chapter 5 provides context for the program by using the survey data to summarize the characteristics of beneficiary and non-beneficiary households and describe beneficiaries' experience with program implementation. Chapter 6 presents the impact estimates for Takaful and Chapter 7 the estimates for Karama. Chapter 8 uses data from a separate representative sample of households collected during the survey to assess the targeting performance of the program. Chapter 9 concludes and discusses implications for social policy in Egypt.

The Most Comprehensive Book on the Subject Chronicles the Development of the Weibull Distribution in Statistical Theory and Applied Statistics Exploring one of the most important distributions in statistics, *The Weibull Distribution: A Handbook* focuses on its origin, statistical properties, and related distributions. The book also presents various approaches to estimate the parameters of the Weibull distribution under all possible situations of sampling data as well as approaches to parameter and goodness-of-fit testing. Describes the Statistical Methods, Concepts, Theories, and Applications of This Distribution Compiling findings from dozens of scientific journals and hundreds of research papers, the author first gives a careful and thorough mathematical description of the Weibull distribution and all of its features. He then deals with Weibull analysis, using classical and Bayesian approaches along with graphical and linear maximum likelihood techniques to estimate

the three Weibull parameters. The author also explores the inference of Weibull processes, Weibull parameter testing, and different types of goodness-of-fit tests and methods. Successfully Apply the Weibull Model By using inferential procedures for estimating, testing, forecasting, and simulating data, this self-contained, detailed handbook shows how to solve statistical life science and engineering problems. This book describes the fundamental phenomena of, and computational methods for, hydraulic transients, such as the self-stabilization effect, restriction of the Joukowsky equation, real relations between the rigid and elastic water column theories, the role of wave propagation speed, mechanism of the attenuation of pressure fluctuations, etc. A new wave tracking method is described in great detail and, supported by the established conservation and traveling laws of shockwaves, offers a number of advantages. The book puts forward a novel method that allows transient flows to be directly computed at each time node during

a transient process, and explains the differences and relations between the rigid and elastic water column theories. To facilitate their use in hydropower applications, the characteristics of pumps and turbines are provided in suitable forms and examples. The book offers a valuable reference guide for engineers and scientists, helping them make transient computations for their own programming, while also contributing to the final standardization of methods for transient computations.
