**Important Notice:** Media content referenced within the product description or the product text may not be available in the ebook version. Have you dreamed of becoming a Nurse for as long as you can remember? Do you think you have a pretty good idea of all that a career in Nursing entails? Or have you just graduated from Nursing School and now find it's nothing as you expected? Worse yet, did your classes not prepare you for the magnitude of responsibility you now have? Were you not given clear strategies on how to manage your patients and the extensive workload required during a 12 hour shift? Or, have you been a Nurse for

some time, but now feel tired, frustrated, and no longer sure this is the career for you? Do you struggle to get through your shift, going home with fear and worry you missed something in the care of your patients, or perhaps don't feel you gave them your best due to being overwhelmed by multiple conflicting priorities? For some of us, the realities of being a Nurse seldom match either our imagination or our expectations, and all too often our education falls short in providing us with adequate preparation-given its limitations in clinical time, intensity, scope, and supervision. Furthermore, traditional Nursing Theory is often a sea of confusing rhetoric which only minimally translates to any sort of practical application. And, suffice it to say, when you're a New Grad, you need survival skills-plain and simple. You've been taught the Science, in terms of Anatomy and Physiology; you've read about the procedures, and may have even performed a few of them once or twice; but, how do you put it altogether when caring for 5 or 6 or 7 patients, especially after a typically minimal orientation, given the financial constraints in today's world of healthcare, where productivity is everything. Nursing 101 offers the missing link-realistic, time-tested, old-fashioned advice on exactly "How to be a Nurse"-essentially, the much-needed lessons on blending Art with Science. Likewise, it speaks to what it truly means to be a Registered Nurse, in terms of core values, role responsibility, professional accountability, and the achievement of clinical

excellence. Finally, it also points out some of the harsh realities of healthcare, and Nursing's place in the grand scheme of things, in terms of effecting positive change. Use it as a primer for Nursing, a basic "how to," as it is loaded with countless practical techniques, simple instructions, and basic knowledge which you rarely get all in one place in Nursing School, and may not assimilate easily on your own, nor from your peers and coworkers. This is the fast track to success. Use it and love what you do! Basic Nursing provides complete coverage of nursing fundamentals in a concise, visually attractive format. Offering the basic principles, concepts, and skills needed by nursing students, it features a consistent and logical organization, with a clear writing style and numerous learning aids. Building on the strengths of the fourth edition, this revision has been thoroughly updated and revised to provide a more focused and engaging presentation. Text Explores the full-spectrum nursing model of thinking, doing, and caring and reinforces the model with critical-thinking questions and exercises in every chapter to help prepare students for practice. Uses multiple case studies per chapter to bring nursing theory to life and explain the nurse's role in today's complex healthcare system. Emphasizes the important aspects of safe and effective care to ensure better patient outcomes. Presents illustrated, step-by-step procedures with rationales that deliver all the information students need for the skills lab or clinical. Promotes effective care planning with care

plans and concept care maps as well as NANDA, NIC, and NOC. Describes the research evidence related to the chapter topic and encourages further study. Designed to be used by students together with the sixth edition of Textbook of basic nursing. This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or

at risk of fragility fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the population of China ages, the cost of hip fracture care there is likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality of life, loss of independence and decreased life expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality, evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these

needs by providing a comprehensive approach to nursing practice in fragility fracture care. A proven approach preferred by LPN/LVN educators and students for more than 50 years, Rosdahl's Textbook of Basic Nursing, 12th Edition, has been thoroughly revised and updated to equip today's LPN/LVN students with the foundational knowledge and skills to confidently pass the NCLEX-PN® and deliver safe, effective care. This engaging, easy to read, highly visual text reflects up-to-date clinical practices and provides the perfect learning package to ensure understanding and help students confidently transition to clinical practice. This innovative text presents nursing fundamentals in a concise, visually attractive format that captures students' attention and addresses dramatic changes taking place in the health care environment. At the heart of this revision is the critical thinking model presented as a practical, clinical decision-making guide and applied to the nursing process throughout. Case studies in all clinical chapters bring this process to life, demonstrating to students how using the combination of critical thinking and the nursing process will help them deliver comprehensive, professional care. Case studies introduce the client, family and nurse, and follow them through synthesizing knowledge and assessment data, planning and evaluating care. It addresses community health care and health promotion by consistently organizing each implementation section into three main areas: health promotion, acute care, and

restorative care. Other themes include delegation, multidisciplinary collaboration, focus on outcomes, cultural sensitivity, gerontologic principles, and client satisfaction. \* Complete coverage of fundamentals in a concise, readable, visually appealing format. \* Five-step nursing process provides a consistent framework in all clinical chapters. \* Hundreds of color photographs and drawings increase educational value while adding visual appeal. \* Client teaching covered in both narrative and boxes to highlight this key nursing role. \* Skills are presented in a clear, two-column format with rationales for all steps. **NEW FEATURES:** \* Critical thinking model provides a practical, clinical decision-making guide applied to the nursing process. \* Case studies in all clinical chapters include the client, family and nurse, and are developed throughout the chapter to demonstrate the ongoing nature of nursing care. \* Implementation consistently addresses health promotion, acute care, and restorative care to reflect the current focus on community-based nursing and health promotion. \* Skills include guidelines to assist nurses when delegating to unlicensed assistive personnel, Critical Decision Points, Recording and Reporting, and Home Care Considerations. \* Expanded evaluation includes both the nurse's and client's perspectives to stress today's "customer satisfaction" emphasis. \* Care Plans based on the case studies highlight key assessment data and include client goals and expected outcomes. \* Procedural Guidelines provide step-by-step
