Professional ASP.NET MVC 1.0 Aug 23 2020 This book begins with you working along as Scott Guthrie builds a complete ASP.NET MVC reference application. He begins NerdDinner by using the File->New Project menu command within Visual Studio to create a new ASP.NET MVC Application. You'll then incrementally add functionality and features. Along the way you'll cover how to create a database, build a model layer with business rule validations, implement listing/details data browsing, provide CRUD (Create, Update, Delete) data form entry support, implement efficient data paging, reuse UI using master pages and partials, secure the application using authentication and authorization, use AJAX to deliver dynamic updates and interactive map support, and implement automated unit testing. From there, the bulk of the rest of the book begins with the basic concepts around the model view controller pattern, including the little history and the state of the MVC on the web today. We'll then go into the

ways that MVC is different from ASP.NET Web Forms. We'll explore the structure of a standard MVC application and see what you get out of the box. Next we dig deep into routing and see the role URLs play in your application. We'll deep dive into controllers and views and see what role the Ajax plays in your applications. The last third of the book focuses entirely on advanced techniques and extending the framework. In some places, we assume that you're somewhat familiar with ASP.NET WebForms, at least peripherally. There are a lot of ASP.NET WebForms developers out there who are interested in ASP.NET MVC so there are a number of places in this book where we contrast the two technologies. Even if you're not already an ASP.NET developer, you might still find these sections interesting for context, as well as for your own edification as ASP.NET MVC may not be the web technology that you're looking for.

Michelangelo and the Pope's Ceiling Oct 05 2021 From the acclaimed author of Brunelleschi's Dome and Leonardo and the Last Supper, the riveting story of how Michelangelo, against all odds, created the masterpiece that has ever since adorned the ceiling of the Sistine Chapel. In 1508, despite strong advice to the contrary, the powerful Pope Julius II commissioned Michelangelo Buonarroti to paint the ceiling of the newly restored Sistine Chapel in Rome. Despite having completed his masterful statue David four years earlier, he had little experience as a painter, even less working in the delicate medium of fresco, and none with challenging curved surfaces such as the Sistine ceiling's vaults. The temperamental Michelangelo was himself reluctant: He stormed away from Rome, incurring Julius's wrath, before he was eventually persuaded to begin. Michelangelo and the Pope's Ceiling recounts the fascinating story of the four extraordinary years he spent laboring over the twelve thousand square feet of the vast ceiling, while war and the power politics and personal rivalries that abounded in Rome swirled around him. A panorama of illustrious figures intersected during this time—the brilliant young painter Raphael, with whom Michelangelo formed a rivalry; the fiery preacher Girolamo Savonarola and the great Dutch scholar Desiderius Erasmus; a youthful Martin Luther, who made his only trip to Rome at this time and was disgusted by the corruption all around him. Ross King blends these figures into a magnificent tapestry of day-to-day life on the ingenious Sistine scaffolding and outside in the upheaval of early-sixteenth-century Italy, while also offering uncommon insight into the connection between art and history.

Pedagogic Research in Geography Higher Education May 20 2020 There are many books about teaching in Geography, but this is the first dealing specifically with Pedagogic Research, its methods and practices. Pedagogy research concerns the processes of learning and the development of learners. It is a learner-centred activity that aims to evaluate and improve the ways that students learn and learn to manage, control and comprehend their own learning processes, first as Geographers in Higher Education but equally as future educated citizens. This book collects together some key research papers from the Journal of Geography in Higher Education. They concern original research and critical perspectives on how Geographers learn, critical evaluations of both new and traditional frameworks and methods used for Pedagogic research in Geography, and some case studies on the promotion of self-authorship, learner autonomy, in key Geography Higher Education contexts such as fieldwork and undergraduate project work. This book is a compilation of articles from various issues of the Journal of Geography in Higher Education.

Crown of Blood Nov 06 2021 'Good people, I am come hither to die, and by a law I am

condemned to the same'. These were the heartbreaking words of a seventeen-year-old girl, Lady Jane Grey, as she stood on the scaffold on a cold February morning in 1554. Her death for high treason sent shockwaves through the Tudor world and served as a gruesome reminder to all who aspired to the Crown that the axe could fall at any time. While the story of 'the Nine Days Queen' has been told, the human and emotional aspects are often ignored. The recent trend of trying to highlight her achievements and her religious faith has, in fact, further obscured the real Jane, a young religious radical who saw herself as an advocate of Protestantism, and who ultimately became a martyr for her faith. This is an important and significant retelling of an often misread tale, examining evidence that has never before been published. Following Lady Jane Grey's journey from the deadly intrigues of her childhood that led inexorably through to her trial and execution, historian Nicola Tallis unravels the grim tapestry of her life along the way.

Precalculus Nov 25 2020 "Precalculus is intended for college-level precalculus students. Since precalculus courses vary from one institution to the next, we have attempted to meet the needs of as broad an audience as possible, including all of the content that might be covered in any particular course. The result is a comprehensive book that covers more ground than an instructor could likely cover in a typical one- or two-semester course; but instructors should find, almost without fail, that the topics they wish to include in their syllabus are covered in the text. Many chapters of OpenStax College Precalculus are suitable for other freshman and sophomore math courses such as College Algebra and Trigonometry; however, instructors of those courses might need to supplement or adjust the material. OpenStax will also be releasing College Algebra and Algebra and trigonometry titles tailored to the particular scope, sequence, and pedagogy of those courses." --Preface.

Aviation English - A global perspective Apr 11 2022 This e-book brings together 13 chapters written by aviation English researchers and practitioners settled in six different countries, representing institutions and universities from around the globe. This e-book is an offshoot of the

8th GEIA Seminar, that counts on the collaboration of GEIA and ICAEA researchers, as well as guest speakers. It brings together thirteen chapters focused on aviation language description, teaching, and assessment, written by practitioners from several institutions around the globe. One of our guests and a keynote speaker, Prof. Eric Frigal, added the excellent contribution of his graduate students from Georgia State University, in the USA, and kindly wrote the Preface. Regarding its content, this e-book has been divided into three parts, according to GEIA's areas of research: language description and analysis; aeronautical English teaching; and assessment practices. The studies collected in this e-book offer us enriching and enlightening discussions that support and promote a better understanding of some key features underlying aviation English language, teaching and assessment practices. We are very pleased to make part of this work. It goes without saying the importance of this e-book for the aviation English field and community. This international publication, besides collecting the studies and work experiences of renowned researches, has also contributed to strengthen the enriching partnership between GEIA members and other researchers. The fact of having been published as an e-book will certainly benefit its circulation and the spreading awareness of aviation English challenges, updates and findings. One of our goals is to spread the news, by making this ESP e-book free for download by as many people and institutions as possible worldwide. Those who place great weight on aeronautical English teaching and assessment practices are aware of the interwoven relation among operational issues, communication and safety. That's why we believe the discussions and analysis carried out throughout this book are so relevant and should reach international communities and organizations in all parts of the globe. Enjoy your reading!

Foundation Rails 2 May 12 2022 You've heard about this amazing web framework called Ruby on Rails that's taken the world by storm, but thought it was way too complex for you? Think again. Foundation Rails 2 takes you through your first steps in Rails, explaining in plain English how to start building dynamic web applications. And there's never been a better time to jump in to the Rails world, as the release of Rails 2 was a major evolutionary leap forward from previous versions. Unlike other Rails books, this book doesn't throw you into the deep end right away in the hopes that you'll learn to swim. Instead, we'll start out with the basics and continually expand your knowledge until, by the end of the book, we're building a Rails application with dynamic features such as user registration, geocoding, filtering results with AJAX, RSS feeds, and an XML interface. Meanwhile, we'll talk about the important issues that other books often leave out such as testing your application's code, securing your application from hackers, optimizing your code for the best performance, and of course, deploying your application. This book takes a focused approach to guiding you through understanding how the pieces of Rails work individually and how they fit together. Instead of emphasizing boring theoretical discussions, Foundation Rails 2 lets you get your hands dirty with the framework and learn the hows and whys of Rails faster than ever. We start with a tour of what makes Rails special and why you need to learn it, move into a gentle introduction to the high points of programming in Ruby, and then take a tour of a sample Rails application. Next, we dig deeper into the core components of Rails before building a complete Rails application together. By the end of this book, not only will you know how to build Rails applications but you'll understand

the reasons behind what you do.

A Home from the Woods Jul 02 2021 If you've ever dreamt of building your own log cabin, or wondered if or how it could be done, you'll find the answers and inspiration here. Half personal narrative, half how-to, *A Home From The Woods* details the methods used for four different log cabin projects: *Uncovering and Restoring A Standing Cabin*; *A Hand-hewn Cabin*; *Building with Rounded Logs*; and *Taking Down and Recreating An Original Log Cabin*. That straightforward advice is countered with a first person narrative as the author relates his young family's experiences and misadventures completing these projects. With little finances and less know-how, but plenty of determination and a little creativity, they proved again and again that if you long for that idyllic cabin of earth and wood, it can be achieved. And, even if you'll never set first foot in the forest you'll be entertained reading what some people will put themselves through for "the simple life" in the country.

Scaffold Parenting Feb 21 2023 Prevent and counteract the general anxiety and emotional fragility prevalent in children and teenagers today—a new parenting philosophy and strategies that give children the tools to flourish on their own (previously published as *The Scaffold Effect*). “A master synthesizer of attachment science, medical practice, and his own experience as a father, Harold Koplewicz capably and compassionately leads us through the art of scaffolding, from early childhood through the important adolescent period.”—Daniel J. Siegel, MD, author of *The Whole Brain Child* Just as sturdy scaffolding is necessary when erecting a building and will come down when the structure grows stable, good parenting provides children with steady and warm emotional nourishment on the path toward independence. Never-ending

parental problem-solving and involvement can have the opposite effect, enabling fragility and anxiety over time. In *Scaffold Parenting*, world-renowned child psychiatrist Harold Koplewicz introduces the powerful and clinically tested idea that this deliberate build-up and then gradual loosening of parental support is the single most effective way to encourage kids to climb higher, try new things, grow from mistakes, and develop character and strength. Explaining the building blocks of an effective scaffold from infancy through young adulthood, he expertly guides parents through the strategies for raising empowered, capable people, including:

- Lay a solid foundation: The parent-child relationship needs to be made from the concrete mixture of emotional availability, positive reinforcement, clear messaging, and consistent rules. From this supportive base, you will forge a bond that will survive adolescence and grow stronger into adulthood.
- Empower growth: Skyscraper or sprawling ranch—the style of your child’s construction is not up to you! Scaffold parenting validates and accommodates the shape the child is growing into. Any effort to block or control growth will actually stunt it.
- Stay on their level: Imagine being on the ground floor of a house and trying to talk to someone on the roof. The person on the roof will have to “talk down” to you or yell. If your child’s building and your scaffold are on the same level, you can speak directly, look each other in the eye, and keep the lines of communication open. Drawing on Dr. Koplewicz’s decades of clinical and personal experience, *Scaffold Parenting* is a compassionate, street-smart, and essential guide for the ages. All of the author’s proceeds from the sale of this book will be donated to the Child Mind Institute.

E-Squared Jan 28 2021 Don’t face reality. Create reality! E-Squared could best be described as a lab manual with simple experiments to prove once and for all that reality is malleable, that consciousness trumps matter, and that you shape your life with your mind. Rather than take it on faith, you are invited to conduct nine 48-hour experiments to prove there really is a positive, loving, totally hip force in the universe. Yes, you read that right. It says prove. The experiments, each of which can be conducted with absolutely no money and very little time expenditure, demonstrate that spiritual principles are as dependable as gravity, as consistent as Newton’s laws of motion. For years, you’ve been hoping and praying that spiritual principles are true. Now, you can know. E-Squared proves the following:

1. There is an invisible energy force or field of infinite possibilities.
2. You impact the field and draw from it according to your beliefs and expectations.
3. You, too, are a field of energy.
4. Whatever you focus on expands.
5. Your connection to the field provides accurate and unlimited guidance.
6. Your thoughts and consciousness impact matter.
7. Your thoughts and consciousness provide the scaffolding for your physical body.
8. You are connected to everything and everyone else in the universe.
9. The universe is limitless, abundant, and strangely accommodating.

Writing Design Fiction Jun 01 2021 Written by leading design philosopher Tony Fry, *Writing Design Fiction: Relocating a City in Crisis* is both an introduction to the power of “design fiction” in the design process, and a novella-length work of fiction in itself-telling the dramatic story of the relocation of the City of Harshon. Set in the near future, Harshon, a delta city, is facing environmental catastrophe due to rising sea levels-consequently, a decision is made to relocate the entire city inland. A diverse cast of voices-including an architect, a journalist, an economist, a construction worker, and residents-narrate the extraordinary challenges and complexities which follow. This work presents a real-world scenario which, in coming decades, will face many of the world's cities. The fictional format provides a novel way of exploring the very serious inherent technical, social, political, economic and cultural challenges. The story provides a rehearsal of the design challenges which are likely to face architects, planners, and designers in an uncertain global future. “Design fiction” is a fast-growing area within design and architecture, increasingly deployed as a serious methodology by designers as a tool in scenario planning. *Writing Design Fiction* takes the practice to a higher level conceptually and theoretically, but also practically. The book is divided into four parts, with the fictional narrative bookended by further critical analysis. Part One shows how a critique of existing modes of design fiction can lead to more grounded and critical thinking and practice. Part Three critically reflects on the narrative, while Part Four presents the practical application of the second order design fiction approach. This book demonstrates the value of a more developed mode of design fiction to students, professional designers and architects across the breadth of design practices, as well as to other disciplines interested in the future of cities.
