Growth, Development and Poverty Alleviation in the Asia-Pacific Dec 16 2019

This volume presents a variety of papers on issues related to growth, development and poverty prepared by specialists in their particular development-related fields. While the living standards of most people around the world have improved over time in absolute terms, many are still in desperate poverty. The major bulk of humanity lives in the continent of Asia, and it is here that some of the more spectacular contrasts in both economic growth and levels of affluence and destitution can be found. Whether India and China can continue to grow as fast as they have done in recent years remains to be seen. More importantly perhaps, whether growth alone can reduce poverty in these countries and in others is a question that needs to be discussed and understood. Outside of India and China, the African continent, particularly the nations in Sub-Saharan Africa is home to large numbers of poor and deprived humanity. Many of these countries are natural resource rich, but that has not enabled many of them to achieve adequate growth and reduce poverty. As countries grow, they put extra pressure on both global resources and the natural environment. The question as to whether there are finite limits to economic growth in a global sense is one that has long exercised thinkers. Technological progress has often enabled countries to economise on resource use without sacrificing growth. Whether that can continue indefinitely is also a question that has acquired a new urgency with the recent faster growth experience of the most populous countries.

Improving z/OS Application Availability by Managing Planned Outages Mar 19 2020 This IBM® Redbooks® publication is intended to make System Programmers, Operators, and Availability Managers aware of the enhancements to recent releases of IBM z/OS® and its major subsystems in the area of planned outage avoidance. It is a follow-on to, rather than a replacement for, z/OS Planned Outage Avoidance Checklist, SG24-7328. Its primary objective is to bring together in one place information that is already available, but widely dispersed. It also presents a different perspective on planned outage avoidance. Most businesses care about application availability rather than the availability of a specific system. Also, a planned outage is not necessarily a bad thing, if it does not affect application availability. In fact, running for too long without an IPL or subsystem restart might have a negative impact on application availability because it impacts your ability to apply preventive service. Therefore, this book places more focus on decoupling the ability to make changes and updates to your system from IPLing or restarting your systems.

The Rough Guide to London Restaurants Jul 23 2020 This guide reviews some 350 recommended eating houses from Wimbledon to Wembley and Brixton to Brick Lane. It includes some very cheap places and some potentially very expensive establishments, but the rule for inclusion is that it must be possible to eat at every restaurant for under 35 pounds a head. Restaurants are grouped by area and should suit all budgets and tastes - cuisines include French, Indian, Chinese, British, Caribbean, Polish and Ethiopian. The book contains three indexes: A-Z by name, cuisine type and mood to help readers make the right decision.
