Family Resource Management May 25 2020
Conversational in style and rich in application and discussion,

Family Resource Management shows students how to apply knowledge and theory to the study of how families manage their resources for both survival and fulfillment.

Multiple perspectives are used to broaden the base of understanding in a contemporary environment.

The book unlocks the complexity of family decision making, enabling students to grasp both the concepts and the underlying explanations of family behavior. A strong theory base and the organization of material within the decision-making process framework facilitate understanding and retention.

The Third Edition has been enhanced through surveys of educational professionals and extensive research of contemporary challenges emerging post 2008 recession and the 2016 election.

The Symbiosis Of Work And Technology Dec 20 2019

Since the 1950s individual researchers and research groups in many countries Have Developed So-Called Symbiotic Design Methods And Approaches, Which have tried to integrate technical, organisational and social goals in order to create economically viable production systems. If implemented Successfully, "Symbiotic Systems" Offer Enhanced Worker And System performance, competitive leverage and employee benefits. Based on contributions from international authors, this text provides state-of-the- art research which is intended to help realise the aims of this innovative initiative.

3D Imaging

Technologies—Multidimensional Signal Processing and Deep Learning Nov 18 2019

This book presents high-quality research in the field of 3D imaging technology. The second edition of International Conference on 3D Imaging Technology (3DDIT-MSP&DL) continues the good traditions already established by the first 3DIT conference (IC3DIT2019)

to provide a wide scientific forum for researchers, academia and practitioners to exchange newest ideas and recent achievements in all aspects of image processing and analysis, together with their contemporary applications. The conference proceedings are published in 2 volumes. The main topics of the papers comprise famous trends as: 3D image representation, 3D image technology, 3D images and graphics, and computing and 3D information technology. In these proceedings, special attention is paid at the 3D tensor image representation, the 3D content generation technologies, big data analysis, and also deep learning, artificial intelligence, the 3D image analysis and video understanding, the 3D virtual and augmented reality, and many related areas. The first volume contains papers in 3D image processing, transforms and technologies. The second volume is about computing and information technologies, computer images and graphics and related

applications. The two volumes of the book cover a wide area of the aspects of the contemporary multidimensional imaging and the related future trends from data acquisition to real-world applications based on various techniques and theoretical approaches.
