In July, 2008, the International Association for Assyriology met in Würzburg, Germany, for 5 days to deliver and listen to papers on the theme

“Organization, Representation, and Symbols of Power in the Ancient Near East.” This volume, the proceedings of the conference, contains 70 of the papers read at the 54th annual Rencontre, including most of the papers from two workshop sessions, one on “collective governance” and the other on “the public and the state.” As the photo of the participants on the back cover demonstrates, the surroundings and ambience of the host city and university provided a wonderful backdrop for the meetings. This report presents key data that measure the condition of education in the United States and

other nations. The data allow users to monitor important developments and discern trends in education. A wide variety of areas are covered, including: reading, writing, and mathematical proficiency; organization and management of educational institutions; college costs and family income; racial and ethnic distribution; voting behavior by educational attainment; and the student's transition from high school to the workforce. A series of essays discusses critical issues facing the nation's educational system. These essays are followed by a presentation of six different education indicators: access,

participation, and progress; achievement, attainment, and curriculum; economic and other outcomes of education; organization and management of educational institutions; climate and diversity of educational institutions; and financial and human resources of educational institutions. This book analyses the various features of specialized discourse in order to assess its degree of specificity and diversification, as compared to general language. Prior to any analysis of such traits, the notion of specialized discourse and its distinctive

properties are clarified, also as compared to other features frequently occurring in specialized texts which cannot be considered distinctive. The presence of such properties are accounted for not only in linguistic but also in pragmatic terms since the approach is interpretative rather than merely descriptive. The complexity of this discourse calls for a multidimensional analysis, covering both lexis and morpho-syntax as well as textual patterning. Some lexical aspects, morphosyntactic features and textual genres are also examined from a diachronic perspective, thus

showing how various conventions concerning specialized discourse have developed over the last few centuries. Partial differential equations (PDEs) have been used in theoretical ecology research for more than eighty years. Nowadays, along with a variety of different mathematical techniques, they remain as an efficient, widely used modelling framework; as a matter of fact, the range of PDE applications has even become broader. This volume presents a collection of case studies where applications range from bacterial systems to population

dynamics of human riots. "This year's report presents 46 indicators of important developments and trends in U.S. education. These indicators focus on participation and persistence in education, student performance and other measures of achievement, the environment for learning, and resources for education"-- Introduction. Image Analysis in Earth Sciences is a graduate level textbook for researchers and students interested in the quantitative microstructure and texture analysis of earth materials. Methods of analysis and applications are introduced using carefully

worked examples. The input images are typically derived from earth materials, acquired at a wide range of scales, through digital photography, light and electron microscopy. The book focuses on image acquisition, pre- and post-processing, on the extraction of objects (segmentation), the analysis of volumes and grain size distributions, on shape fabric analysis (particle and surface fabrics) and the analysis of the frequency domain (FFT and ACF). The last chapters are dedicated to the analysis of crystallographic fabrics and orientation

imaging. Throughout the book the free software Image SXM is used. Models of Science Dynamics aims to capture the structure and evolution of science, the emerging arena in which scholars, science and the communication of science become themselves the basic objects of research. In order to capture the essence of phenomena as diverse as the structure of co-authorship networks or the evolution of citation diffusion patterns, such models can be represented by conceptual models based on historical and ethnographic observations,

mathematical descriptions of measurable phenomena, or computational algorithms. Despite its evident importance, the mathematical modeling of science still lacks a unifying framework and a comprehensive study of the topic. This volume fills this gap, reviewing and describing major threads in the mathematical modeling of science dynamics for a wider academic and professional audience. The model classes presented cover stochastic and statistical models, system-dynamics approaches, agent-based simulations, population-dynamics models, and complex-

network models. The book comprises an introduction and a foundational chapter that defines and operationalizes terminology used in the study of science, as well as a review chapter that discusses the history of mathematical approaches to modeling science from an algorithmic-historiography perspective. It concludes with a survey of remaining challenges for future science models and their relevance for science and science policy. Statistical Power
Analysis is a

nontechnical guide to power analysis in research planning that provides users of applied statistics with the tools they need for more effective analysis. The Second Edition includes: * a chapter covering power analysis in set correlation and multivariate methods; * a

chapter considering effect size, psychometric reliability, and the efficacy of "qualifying" dependent variables and; * expanded power and sample size tables for multiple regression/correlation. Maurizio Gotti analyses the various features of
