Reverend Bacon believes that every person can live a full and creative life if they can learn to move through troubling emotions such as fear, anger, and sadness to find the beloved within themselves. Readers will learn how insecurity can keep us from connecting with others, our loving self, and finding our own peace, joy, and creative power. 8 HABITS OF LOVE will show, through relatable stories, how to create a full, meaningful life by developing simple habits--stillness, truth, forgiveness, compassion, play, candor, generosity, and community--and by asking such important questions as: How do I know I'm living the life I should be? How do I forgive those who have hurt me? How do I talk candidly with difficult people? How do I best help others when they need it? And How do I let go of the past and move forward? Having dedicated his life to helping others, Ed Bacon has seen firsthand that when we open our hearts to love's abundance we are able to transform our lives for the better and make the world a more just and peaceful place. Through illuminating stories and invaluable advice, 8 HABITS OF LOVE reveals how we can create full and meaningful lives by developing simple yet profound habits of generosity, stillness, truth, candor, play, forgiveness, compassion, and community. When put into practice in our daily lives, these important habits help us make the choice--day after day--to reject fear's hold and embrace, instead, the immense power and grace within all of us. Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.
