Digital games have become an increasingly pervasive aspect of everyday life as well as an embattled cultural phenomenon in the twenty-first century. As new media technologies diffuse around the world and as the depth and complexity of gaming networks increase, scholars are becoming increasingly savvy in their approach to digital games. While aesthetic and psychological approaches to the study of digital games have garnered the most attention in the past, scholars have only recently begun to study the important social and cultural aspects of digital games. This study sketches some of the various trajectories of digital games in modern Western societies, looking first at the growth and persistence of the moral panic that continues to accompany massive public interest in digital games. The book then continues with what it deems a new phase of games

research exemplified by systematic examination of specific aspects of digital games and gaming. Section One includes four chapters that collectively consider politics and the negotiation of power in game worlds. Section Two details the ideological webs within which games are produced and consumed. Specifically, this important section offers a critical cultural analysis of the hegemony that exists within games and its influence upon players' personal ideologies. To conclude this analysis, Section Three examines game design features that relate to players' self-characterization and social development within digital game worlds. Section Four explores the important relationship between the producers and consumers of digital games, especially inasmuch as this relationship is giving rise to a community of novices and professionals who will together determine the future of gaming and--to a degree--popular culture. Over the years, technological advances have given publishers the ability to produce more books and online publications with greater speed. This new efficiency, however, has increased editors' workloads, limiting the amount of detailed editorial feedback that they can provide authors. In turn, writers must become self-editors, ensuring that their text is nearly perfect on submission. This book serves as a guide to self-editing nonfiction print and online publications, including articles for general and academic audiences. It is both prescriptive and descriptive, drawing from stylebooks, dictionaries, research, and more to provide a full picture of both style and grammar. Also provided are techniques that boost search-engine optimization and engagement of Internet audiences. Though she spent most of the rare happy moments of her childhood at a ranch camp, Jordan never thought there was space for horses in her adult life. Jordan thinks she's doing pretty well. She survived childhood with an abusive mother. Now she's holding down a job and getting herself through the day-to-day slog of modern living. But her only social outlet is a game--an MMPORG called Heroes of the Totem Spirit--where her partner is a horse named after the one she lost as a kid. Jordan is well aware racking up so many hours in a fantasy world isn't exactly healthy; her brother is constantly hounding her to get out more. When another player in the game starts making friendly overtures, she can even concede this might be a bad sign. So when an ad pops up in her work queue about a ranch offering riding lessons, she decides she needs a new outlet. She heads to the Tipped Z, where she meets her instructor, Erin, and a ranch hand named Grant. Grant proves to be interesting, and not just because he seems potentially interested in her. Though he's clearly a cowboy, he mysteriously refuses to get on a horse. When Jordan sets out to figure out why, she realizes she's going to have to deal with some of her own unaddressed trauma if she wants things with Grant to evolve. --- A Man Who Heals can be read as a stand-alone novel, but it is the third book in the Tipped Z series. These novels combine horsemanship, family, love, and the Tucson desert into thoughtful, heart-warming reads. 'Teaching Epidemiology' is written for those who are teaching epidemiology for the first time or for those who have to teach a new course in epidemiology. The city had been dumping sewage into it for generations, coating the seafloor with a layer of "black mayonnaise." Fisheries collapsed, wildlife fled, and locals referred to floating tampon applicators as "beach whistles." In the 1990s, work began on a state-of-the-art treatment plant and a 10-mile-long tunnel--its endpoint stretching farther from civilization than the earth's deepest ocean trench--to carry waste out of the harbor. With this impressive feat of engineering, Boston was poised to show the country how to rebound from environmental ruin. But when bad decisions and clashing corporations endangered the project, a team of commercial divers was sent on a perilous mission to rescue the stymied cleanup effort. Five divers went in; not all of them came out alive. Drawing on hundreds of interviews and thousands of documents collected over five years of reporting, award-winning writer Neil Swidey takes us deep into the lives of the divers, engineers, politicians, lawyers, and investigators involved in the tragedy and its aftermath, creating a taut, action-packed narrative. The climax comes just after the hard-partying DJ Gillis and his friend Billy Juse trade assignments as they head into the tunnel, sentencing one of them to death. An intimate portrait of the wreckage left in the wake of lives lost, the book--which Dennis Lehane calls "extraordinary" and compares with The Perfect Storm--is also a morality tale. What is the true cost of these large-scale construction projects, as designers and builders, emboldened by new technology and pressured to address a growing population's rapacious needs, push the limits of the possible? This is a story about human risk--how it is calculated, discounted, and transferred--and the institutional failures that can lead to catastrophe. Suspenseful yet humane, Trapped Under the Sea reminds us that behind every bridge, tower, and tunnel--behind the infrastructure that makes modern life possible--lies unsung bravery and extraordinary sacrifice. In Developing Mission, Joseph W. Ho offers a transnational cultural history of US and Chinese communities framed by missionary lenses through time and space--tracing the lives and afterlives of images, cameras, and visual imaginations from before the Second Sino-Japanese War through the first years of the People's Republic of China. When American Protestant and Catholic missionaries entered interwar China, they did so with cameras in hand. Missions principally aimed at the conversion of souls and the modernization of East Asia, became, by virtue of the still and moving images recorded, quasi-anthropological ventures that shaped popular understandings of and formal foreign policy toward China. Portable photographic technologies changed the very nature of missionary experience, while images that missionaries circulated between China and the United States affected cross-cultural encounters in times of peace and war. Ho illuminates the centrality of visual practices in the American missionary enterprise in modern China, even as intersecting modernities and changing Sino-US relations radically transformed lives behind and in front of those lenses. In doing so, Developing Mission reconstructs the almost-lost histories of transnational image makers, subjects, and viewers across twentieth-century China and the United States. Writing a User's Manual offers practical insight into the processes that go into writing a novel, from planning to story development, research to revision and, finally, delivery in a form which will catch the eye of an agent or publisher. David Hewson, a highly productive and successful writer of popular fiction with more than sixteen novels in print in twenty or so languages, shows how to manage the day to day process of writing. Berger's slim, user-friendly volume on academic writing is a gift to linguistically-stressed academics. Author of 60 published books, the author speaks to junior scholars and graduate students about the process and products of academic writing. He differentiates between business writing skills for memos, proposals, and reports, and the scholarly writing that occurs in journals and books. He has suggestions for getting the "turgid" out of turgid academic prose and offers suggestions on how to best structure various forms of documents for effective communication. Written in Berger's friendly, personal style, he shows by example that academics can write good, readable prose in a variety of genres. Represents an exploration of the relationship between imagination and reality as seen through the eyes of the dying Serge Valene, an inhabitant of a large Parisian apartment block. This intergrated set of technical and behavioural readings are all directed at the human opportunities and problems associated with the design and implementation of information systems. It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents' expectations. Over the last decade, mainstream macroeconomic models in the UK and elsewhere have taken on board the 'Rational Expectations Revolution' by explicitly incorporating expectations of the future. In principle, one can perform the same technical exercises on a forward expectations model as on a conventional model -- and more! Rational Expectations in Macroeconomic Models deals with the numerical methods necessary to carry out policy analysis and forecasting with these models. These methods are often passed on by word of mouth or confined to obscure journals. Rational Expectations in Macroeconomic Models brings them together with applications which are interesting in their own right. There is no comparable textbook in the literature. The specific subjects include: (i) solving for model consistent expectations; (ii) the choice of terminal condition and time horizon; (iii) experimental design: i.e., the effect of temporary vs permanent, anticipated vs. unanticipated shocks; deterministic vs. stochastic, dynamic vs. static simulation; (iv) the role of exchange rate; (v) optimal control and inflation-output tradeoffs. The models used are those of the Liverpool Research Group in Macroeconomics, the London Business School and the National Institute of Economic and Social Research.
