take this opportunity to thank Gaur Gopal Das Ji for his wonderful choice of words and wisdom which he has used to help crores of people like me to humble us, ask us to think again of what we know is true or believe in. His teachings and humor has undoubtedly touched millions of hearts and more so helped many like me to overcome our fits of rage, due to our arrogance and ignorance of the finest & simplest of truths. His simplest of explanations sometimes are what have moved and broken down my walls of Self-righteousness which I had built around myself. I had forgotten quite simply that though others may not have achieved as much but I was quite simply put a fool to undermine or insult them as I was not actually judging them but in a way was showing that though I had learnt a lot of arts but I was still poor at heart. I realised through Sir's teachings that though they may have done something to annoy me, losing my patience and showing my anger was my weakness and that I was actually involuntarily stating that I was a fool & a nobody to judge. Iconography as a crucial form of communication long before computers, and the myriad ways in which signs and symbols are integrated into the age of digital information, form the two parts of

Large ungulates in tropical forests are among the most threatened taxa of mammals. Excessive hunting, degradation of and encroachments on their natural habitats by humans have contributed to drastic reductions in wild ungulate populations in recent decades. As such, reliable assessments of ungulate-habitat relationships and the

spatial dynamics of their populations are urgently needed to provide a scientific basis for conservation efforts. However, such rigorous assessments are methodologically complex and logistically difficult, and consequently many commonly used ungulate population survey methods do not address key problems. As a result of such deficiencies, key parameters related to population distribution, abundance, habitat ecology and management of tropical forest ungulates remain poorly understood. This book addresses this critical knowledge gap by examining how population abundance patterns in five threatened species of large ungulates vary across space in the tropical forests of the Nagarahole-Bandipur reserves in southwestern India. It also explains the development and application of an innovative methodology - spatially explicit line transect sampling - based on an advanced hierarchical modelling under the Bayesian inferential framework, which overcomes common methodological deficiencies in current ungulate surveys. The methods and results presented provide valuable reference material for researchers and professionals involved in studying and managing wild ungulate populations around the globe. Yeh pustak

This book covers various aspects of information on bio-ecology, temporal and spatial distribution, key mortality factors, population dynamics and early warning system, host plant resistance, mechanism and inheritance of resistance, introgression of resistance genes from closely related wild relatives of crops, transgenics, molecular marker-assisted selection, bio-control agents including natural enemies and biopesticides, natural plant products, chemical control and insecticide resistance management, and integrated management of Heliothis/Helicoverpa. Considering the complexity of effectively managing Heliothis/Helicoverpa infestations, it is imperative that we follow an integrated approach. This integration will involve agronomic and cultural management, host plant resistance, transgenics, biological control and judicious use of chemical pesticides. Many poten I don't know when you all are going to read this or maybe you are or not. Why I said this you'll understand through the pages. Motive to write these 30 letters to my readers and future me is just that I want to show my future self after going through what all I have been where I am so that in future I don't take any step that is not good for me. And the second motive is, I know there are people like me what I was in the past. I just want to help them in any way I can may be they get motivated and know how to deal with situations. I think this book should be read by all introverts or the people who are not able to open up because this is how I got the idea to form these letters and that's how I changed myself into someone I always wanted. Being reserved sometimes grows your problems and stress. You need to be outspoken even if you want to work in an MNC. Some letters in it would explain this in better way. "You don't need to handle all the

world's problems all by yourself". That's how I decided to write this book. I hope my journey from an extreme introvert to an outspoken can help my readers in any way. A richly illustrated examination of the primary purpose of writing, relating the ability to put down information in a permanent form to the overall concept of literacy. With the growth of information technology, this beautifully illustrated book re-examines the concept and purpose of writing, and questions the long cherished idea that the alphabet stands at the apex of a hierarchy towards which all 'proper' forms of writing must by necessity progress. The author asserts that the primary purpose of writing lies in its ability to store and transmit information essential to the social, economic and political survival of a particular group. Writing, in whatever form, allows the individual to interact with the group, to acquire an amount of knowledge that far outweighs the scope of memory (oral traditions), and to be free to manipulate this knowledge and arrive at new conclusions. Many theories that have so far been taken as proof rest merely on speculation. Writing has been looked at through the narrowed vision of specialists and needs to be examined from a different angle -- an angle that looks at

writing not as an intellectual achievement that in itself furthered civilization, but as an essential part of the political infrastructure of a society. Complete with more than 80 photographs and illustrative examples of writing through the ages, this book provides an attractive and straightforward entrance to the subject. It contains a network of references leading the reader towards further information, and most entries are enriched with bibliographical notes. This book provides a comprehensive view of blockchain business models, governance structure, technology landscape, and architecture considerations. Forensic Ballistics and Forensic Chemistry 2nd Edition Reprint (With Supplement) The Pragmatic Guide to Driving Value and Disrupting Markets with Blockchain "Blockchain's potential to transform businesses has generated a tremendous amount of excitement across industries. However, it can be difficult for decision makers to develop a practical approach to blockchain for their specific business requirements. By identifying and clearly describing the value of blockchain for enterprises, as well as the processes required to harness blockchain to achieve business

objectives, Blockchain for Business presents a startlingly concise yet comprehensive roadmap for business leaders. This book is an excellent resource for anyone looking to leverage blockchain to transform their business." — Dr. Won-Pyo Hong, President & CEO of Samsung SDS "Much has been written about blockchain in the past few years: what it is and what it is not (at various levels of detail), as well as the technology's long-term strategic value for companies, industries, and economies. However, what we've been missing is a practical, operational, 'how to' set of steps for creating, implementing, and operating a blockchain-based solution. This book aims to fill that gap. It's an invaluable tool for anyone ready to take the plunge and start taking advantage of this remarkable technology." —Irving Wladawsky-Berger, research affiliate, MIT; columnist, WSJ CIO Journal; VP Emeritus, IBM "I will never be able to adequately express how useful this book will be to my class. In addition the great chapters on cybersecurity, I loved the Integration Models, especially 'Coexistence with Systems of Record.' Legacy integration with Blockchain is a critical barrier, and you nailed it!" —Thomas Doty, JD, LLM - Adjunct Professor, University of New Hampshire Law
