**International Handbook of Earthquake Engineering** Jan 13 2022 The subject of earthquake engineering has been the focus of my teaching and research for many years. Thus, when Mario Paz, the editor of this handbook, asked me to write a Foreword, I was interested and honored by his request. Worldwide, people are beginning to understand the severity of the danger to present and future generations caused by the destruction of the environment. Earthquakes pose a similar threat; thus, the proper use of methods for earthquake-resistant design and construction is vitally important for countries that are at high risk of being subjected to strong-motion earthquakes. Most seismic activity is the result of tectonic earthquakes. Tectonic earthquakes are very special events in that, although they occur frequently, their probability of becoming natural hazards for a specific urban area is very small. When a severe earthquake does occur near an urban area, however, its consequences are very large in terms of structural destruction and human suffering.

**Biological Models via Interval Type-2 Fuzzy Sets** Jul 07 2021 This book offers a gentle introduction to type-2 fuzzy sets and, in particular, interval type-2 fuzzy sets and their application in biological modeling. Interval type-2 fuzzy modeling is a comparatively recent direction of research in fuzzy modeling. As the modeling of biological problems is inherently uncertain, the use of fuzzy sets in this field is a natural choice. The coverage begins with a succinct review of type-1 fuzzy basic theory, before providing a comprehensive and didactic explanation of type-2 fuzzy set components. In turn, Fuzzy Rule-Based Systems, or FRBS, are shown for both types, interval type-2 and type-1 fuzzy sets. Applications include the pharmacological models, prediction of prostate cancer stages, a model for HIV population transfer (asymptomatic to symptomatic), an epidemiological disease caused by HIV, some models in population growth, included the Malthus Model, and an epidemic model refers to COVID-19. The book is ideally suited to graduate students in mathematics and related fields, professionals, researchers, or the public interested in interval type-2 fuzzy modeling. Largely self-contained, it can also be used as a supplementary text in specialized graduate courses.

**Fundamentals de Ciencia de Polimeros** Apr 04 2021 This is a new, basic introduction to polymer science. It is both comprehensive and readable. The authors are leading educators in this field with extensive backgrounds in industrial and academic polymer research. The text starts with a description of the types of microstructures found in polymer materials. This provides an understanding of some of the key features of the various mechanisms of homopolymerization and copolymerization which are discussed in following chapters. Also discussed in these chapters are the kinetics and statistics of polymerization, with a separate chapter on the characterization of chain structure by spectroscopic methods. The next part of the text deals with chain conformation, structure and morphology, leading to a discussion of crystallization,

melting and glass transition. The discussion then moves from solid state to solution properties where solution thermodynamics is introduced. This provides the basis for discussion of the measurement of molecular weight by various solution methods. The final chapter deals with mechanical and rheological properties which are discussed from a phenomenological continuum approach and then in terms of a fundamental molecular perspective. Altogether, this new text provides a comprehensive, readable introduction to and overview of polymer science. It is well illustrated with schematics prepared for this text to help in the understanding of key concepts. It will provide a basic understanding of today's polymer science for technical and engineering personnel not already familiar with the subject, and a convenient update and overview for materials scientists.

Homemade pasta is easy, fast, and fun. It tastes better than boxed pastas from the store. And, while-store-bought pastas do indeed come in a variety of shapes, they all have basically one bland and unexciting flavor; by contrast, as this wide-ranging and deliciously inventive book shows, making pasta by hand at home lets you create and enjoy dozens and dozens of different flavors of noodles. In her previous books—on such subjects as searing, marinating, and cast-iron cooking—chef, cooking teacher, and food blogger Lucy Vasefirer has earned a reputation for expertly and gently translating the methods of master chefs into simple-to-follow, step-by-step instructions that let home cooks cook like the pros. Here, Lucy does the same for pasta-making, showing you how easy it is to use a sheeter or an extruder of any type, manual or electric, to create tasty pastas that will please everyone from grown-up gourmants to picky kids who want pasta at nearly every meal. Lucy shares in these pages terrific purees that you can make, using a blender or a mixing bowl, that you then can turn into all sorts of flavored pastas, from the familiar tomato or spinach pastas to noodles flavored with herbs like basil or tarragon, spices like pepper or saffron, and other flavors, such as a Sage Brown Butter Pasta that incorporates a flavored butter. She teaches you how to make every kind of pasta shape with your pasta machine, including ones you

can't find in stores. She includes durum and semolina pastas, the most common kinds, as well as buckwheat, ancient-grain, and gluten-free pastas. She even shows how to make Asian noodles, such as udon, soba, and ramen, with your pasta machine. Whether you are a first-time owner of a pasta maker or a seasoned pro looking for exciting new ideas, this book has more than 100 splendid recipes, plus loads of clever tips and tricks, that will make you love your pasta machine and use it often.

**The nEU-Med project: Vetricella, an Early Medieval royal property on**

**Tuscany's Mediterranean** May 25 2020 The nEU-Med project is part of the Horizon 2020 programme, in the ERC Advanced project category. It began in October 2015 and the University of Siena is the host institution of the project. The project is focussed upon two Tuscan riverine corridors leading from the Gulf of Follonica in the Tyrrhenian Sea to the Colline Metallifere. It aims to document and analyze the form and timeframe of economic growth in this part of the Mediterranean, which took place between the 7th and the 12thc. Central to this is an understanding of the processes of change in human settlements, in the natural and farming landscapes in relation to the exploitation of resources, and in the implementation of differing political strategies. This volume presents the multi-disciplinary research focussed upon the key site of the project, Vetricella, and its territory. Vetricella is thought to be the site of Valli, a royal property in the Tuscan march. It is the only Early Medieval property to be extensively studied in Italy. Located on Italy's Tyrrhenian coast, the archaeology and history of this site provide new insights on estate management, metal production and wider Mediterranean relations in the later first millennium. Apart from reports on the archaeology, the finds from excavations and environmental studies, three essays consider the wider European historical and archaeological context of Vetricella. Future monographs will feature studies by members of the project team on aspects of Vetricella, its finds and territory.
