Huge quantities of old films and videos have lain unseen for many years; yet did you know it was possible to make money from this ancient footage? Many people started with silent 8mm or super 8mm, before inevitably progressing to analogue video and then to digital. Unfortunately so many of these early recorded family memories now lay gathering dust in the form of outdated formats. Like so many

others, my cameras, tapes and films ended up in a box on top of a wardrobe. I did know that there were people who could convert these to DVD's, but the sheer volume of my old stuff forbade this on cost alone. In any case, giving all my old films to some stranger gave me the feeling that I had lost control somehow of the quality and editing process. I also knew that it was possible to buy specialist hardware that could perhaps carry out this task but decided to do my own research and solve this problem in my own way. By diligent examination of the hardware that I and so many other people had already

in their homes, I found that I could successfully convert all of my stuff into digital format without problems and without buying expensive hardware. This not only saved me money but could potentially make money by offering this service to others. In addition, it generated a whole new library of videos for me to upload onto YouTube to increase my personal income from their revenue sharing scheme. Yes, by becoming a 'YouTube Partner' you can actually profit from your old family movies! This book also contains valuable detailed notes on editing and getting the best from your camera.

It tells you exactly what to do and how to do it! If you are ready to move up to a higher standard of video production then this book will undoubtedly help. Includes a brief history of home movie making. Written by an author with over fifty years of film making experience. Simpson, the "profession" of private investigation has risen to a new level of respect among both the legal community and the public at large because the success of O.J.'s "Dream Team" was largely a result of the brilliant work done by defense investigators. Private investigators are often called upon to provide inf The genesis of modern searches for observable

meteoritic phenomena on the Moon is the paper by Lincoln La Paz in Popular Astronomy magazine in 1938. In it he argued that the absence of observed fashes of meteoritic impacts on the Moon might be interpreted to mean that these bodies are destroyed as luminous meteors in an extremely rarefed lunar atmosphere. The paper suggested the possibility of systematic searches for such possible lunar meteors. With these concepts in mind, I was surprised to note a transient moving bright speck on the Moon on July 10, 1941. It appeared to behave very much as a lunar meteor would -

except that the poorly estimated duration would lead to a strongly hyperbolic heliocentric velocity. Thus, the idea of systematic searches for both possible lunar meteors and meteoritic impact fashes was born. It was appreciated that much time might need to be expended to achieve any positive results. Systematic searches were carried out by others and myself chiefly in the years 1945-1965 and became a regular program at the newly founded Association of Lunar and Planetary Observers, or ALPO. This book may seem horribly out of date since it spends most of the time describing how to adapt compact film cameras for flight. This includes building large payload bays and methods of mechanically and/or electrically triggering the cameras. It's being re-issued because while the actual payloads being lofted are obsolete, the techniques of building sturdy payload bays for comparatively large, heavy instruments and methods of mechanically and/or electrically triggering them is

still relevant. In fact, even more so with the recent rise of university-level programs using rocketry as a teaching tool. Observing the Moon is a definitive work, written as a reference book for anyone seriously interested in the Moon and its geology. It is of course a perfect companion for practical observers. The CD-ROM requires a PC running Windows 3.1 or higher, a minimum of 16MB (Windows 3.1), 64MB (Windows 95 up) of memory and a 2x or faster CD-ROM player.
