Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center The U.S. Army Corps of Engineers operates approximately 270 navigation lock chambers constructed of plain or reinforced concrete. Many of these structures require, or will require significant repairs to ensure safe and efficient operations. Modern engineering technology is providing procedures for performing condition surveys, consistent and quantitative conditions assessment, and data base management. Combined with economic analyses, these procedures afford efficient maintenance and repair (M and R) budget planning through the evaluation of current condition and the comparison of various M and R alternatives based on life cycle costs. Collectively these procedures are called the Repair, Evaluation, Maintenance and Rehabilitation (REMR) Management System. The LOCKWALL program documented in this manual addresses the REMR aspects of concrete navigation lock monoliths. All the techniques you need to become an expert navigator. Celestial navigation can be a daunting and intimidating subject for some to learn. There are many comprehensive books on the subject which I recommend, but the beginning student can be overwhelmed by the vast amount of information in these texts. To initially learn celestial navigation, sometimes less is more. By clearing a path through the esoteric details and providing just enough information with concise explanations, simple visual aids and examples, learning celestial navigation becomes easier and more enjoyable. The goal of this booklet is to serve as a launch pad into the subject which may be all that many yachtsmen need. For those who want to learn more, this booklet will prepare you for more in-depth studies. Includes full-color 3-D illustrations. Forward by John Kretschmer V.1. The 2001 edition of Pub. 1310 Radar Navigation and Maneuvering

Board Manual combines selected chapters from the sixth edition of Pub. 1310, Radar Navigation Manual, and the fourth edition of Pub. 217, Maneuvering Board Manual. This manual has been compiled by the editorial staff of the Maritime Safety Information Center at the National Imagery and Mapping Agency. It is intended to be used primarily as a manual of instruction in navigation schools and by naval and merchant marine personnel. By combining the previous editions of Pub. 1310 and Pub. 217 into one book we hope that we have provided a practical reference for mariners on board ship and instructors ashore. It is also intended to be of assistance to others who are concerned with marine radar in different and less direct ways. In combining the two manuals, every effort has been made to retain the original style and format which has proven to be clear and helpful to the maritime community. Most of the illustrations and examples have been carried forward into this edition. The chapter on ARPA has been expanded and now includes a sample operating manual for a modern commercial radar and ARPA. Many excellent other publications on ARPA are available and should be consulted for a more thorough understanding on this subject matter. This report is part of the U.S. Coast Guard's Performance of Aids to Navigation (AN) Systems Project. The objective of this project is to provide guidelines for evaluation and design of AN systems in restricted waterways. The major effort has been the evaluation of aid systems under a variety of conditions on a marine simulator developed for the project at Ship Analytics, Inc., North Stonington, Conn. This report describes the implementation task which was designed to experimentally test the draft manual's guidelines for evaluation and design of AN systems in restricted waterways. The Upper Narragansett Bay near Providence, Rhode Island, was the channel in which the draft manual's recommendations were implemented. Data was primarily collected at sea in both the original and modified channel. The at-sea data collection electronically tracked 30,000 dwt tankers inbound in the Upper Narragansett Bay.
