The Noisy Renaissance Apr 16 2022 From the strictly regimented church bells to the freewheeling chatter of civic life, Renaissance Florence was a city built not just of stone but of sound as well. An evocative alternative to the dominant visual understanding of urban spaces, The Noisy Renaissance examines the premodern city as an acoustic phenomenon in which citizens used sound to navigate space and society. Analyzing a range of documentary and literary evidence, art and architectural historian Niall Atkinson creates an “acoustic topography” of Florence. The dissemination of official messages, the rhythm of prayer, and the murmur of rumor and gossip combined to form a soundscape that became a foundation in the creation and maintenance of the urban community just as much as the city’s physical buildings. Sound in this space triggered a wide variety of social behaviors and spatial relations: hierarchical, personal, communal, political, domestic, sexual, spiritual, and religious. By exploring these rarely studied soundscapes, Atkinson shows Florence to be both an exceptional and an exemplary case study of urban conditions in the early modern period.

Every Nation Has Its Dish Jun 06 2021 Jennifer Jensen Wallach's nuanced history of black foodways across the twentieth century challenges traditional narratives of "soul food" as a singular style of historical African American cuisine. Wallach investigates the experiences and diverse convictions of several generations of African American activists, ranging from Booker T. Washington and W. E. B. Du Bois to Mary Church Terrell, Elijah Muhammad, and Dick Gregory. While differing widely in their approaches to diet and eating, they uniformly made the cultivation of "proper" food habits a significant dimension of their work and their conceptions of racial and national belonging. Tracing their quests for literal sustenance brings together the race, food, and intellectual histories of America. Directly linking black political activism to both material and philosophical practices around food, Wallach frames black identity as a bodily practice, something that conscientious eaters not only thought about but also did through rituals and performances of food preparation, consumption, and digestion. The process of choosing what and how to eat, Wallach argues, played a crucial role in the project of finding one's place as an individual, as an African American, and as a citizen.

The Pursuit of Knowledge Jul 19 2022 Richard C. Atkinson's eight-year tenure as president of the University of California (1995-2003) reflected the major issues facing California itself: the state's emergence as the world's leading knowledge-based economy and the rapidly expanding size and diversity of its population. As this selection of President Atkinson's speeches and papers reveals, his administration was marked by innovative approaches that deliberately shaped U.C.'s role in this changing California. These writings tell the story of the national controversy over the SAT and

Atkinson's successful challenge to the dominance of the seventy-five-year-old college entrance examination. They also highlight other issues with national significance: U.C.'s experiments with race-neutral admissions programs; the challenges facing academic libraries and the University's pioneering activities with the California Digital Library; and the University's involvement in new paradigms of industry-university research. Together, these speeches and papers open a window on an eventful period in the history of the nation's leading public research university and the history of American higher education.

Big Is Beautiful Sep 28 2020 Why small business is not the basis of American prosperity, not the foundation of American democracy, and not the champion of job creation. In this provocative book, Robert Atkinson and Michael Lind argue that small business is not, as is widely claimed, the basis of American prosperity. Small business is not responsible for most of the country's job creation and innovation. American democracy does not depend on the existence of brave bands of self-employed citizens. Small businesses are not systematically discriminated against by government policy makers. Rather, Atkinson and Lind argue, small businesses are not the font of jobs, because most small businesses fail. The only kind of small firm that contributes to technological innovation is the technological start-up, and its success depends on scaling up. The idea that self-employed citizens are the foundation of democracy is a relic of Jeffersonian dreams of an agrarian society. And governments, motivated by a confused mix of populist and free market ideology, in fact go out of their way to promote small business. Every modern president has sung the praises of small business, and every modern president, according to Atkinson and Lind, has been wrong. Pointing to the advantages of scale for job creation, productivity, innovation, and virtually all other economic benefits, Atkinson and Lind argue for a "size neutral" policy approach both in the United States and around the world that would encourage growth rather than enshrine an anachronism. If we overthrow the "small is beautiful" ideology, we will be able to recognize large firms as the engines of progress and prosperity that they are.
