Corporate Governance Strengthening Latin American Corporate Governance The Role of Institutional Investors Feb 07 2022 This report reflects long-term, in-depth discussion and debate by participants in the Latin American Roundtable on Corporate Governance.

Corporate Finance Under Asymmetric Information Sep 21 2020 Seminar paper from the year 2014 in the subject Economics - Finance, , course: MBA and Engineering, language: English, abstract: The specter of decreased economic activities, financial crisis, unbecoming ethical standards have in the recent past and fore going, characterized asymmetric information on corporate finance. The consequences normally have a ricochet effect and can be generally catastrophic to normal economic activities to mention the least. This paper considers scenario's where information asymmetry was prevalent or may have had its effects play out. The typical investor mindset and the opportunity cost associated with the preferred capital structure of the capitalizing process were mentioned. A basis for proper appreciation of the concept - Corporate finance under asymmetric information was initiated here, with a detailed explanation of corporate finance and its components, this was succeeded by a summary of scenarios where asymmetric information were prevalent and an intelligent look was also taken at asymmetric information between insiders and investors and the concomitant lemon problem, where the effects were carefully highlighted in a progression to the level of severity - Market breakdown and costly signaling. The fact that asymmetric information has been widely recognized as bad and generally viewed in a negative light must warrant it being viewed with a high level of seriousness. It is

widely known that while lot of effort have been put into stemming the tides of the consequences of asymmetric information, a lot of effort too, have been dedicated to innovation and risk assessment, to capture the interest of investors, who have been affected by the consequences of asymmetric information. These may have formed a veritable platform for a recent paper by Pierre Barbaroux (2014), that elucidated the rise of innovation and innovative entrepreneurs based on the management of asymmetric information. An attempt has in any case, been made here to suggest efforts at marginalizing the negative impacts of asymmetric information and also remedies at reducing the far reaching impacts on the lenders and the aggregate economic activity in general.

Complex Mortgages (CM) Jan 18 2023 CM became a popular borrowing instrument during the bullish housing market of the early 2000s but vanished rapidly during the subsequent downturn. These non-traditional loans (interest only, negative amortization, and teaser mortgages) enable households to postpone loan repayment compared to traditional mortgages and hence relax borrowing constraints. But, they increase household leverage and heighten dependence on mortgage refinancing. CM were chosen by prime borrowers with high income levels seeking to purchase expensive houses relative to their incomes.

Borrowers with CM experience substantially higher ex post default rates than borrowers with traditional mortgages with similar characteristics. Illus. This is a print on demand report.

Behavioral Finance: The Second Generation Nov 16 2022

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in

the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

Data Science for Economics and Finance Jul 12 2022 This open access book covers the use of data science, including advanced machine learning, big data analytics, Semantic Web technologies, natural language processing, social media analysis, time series analysis, among others, for applications in economics and finance. In addition, it shows some successful applications of advanced data science solutions used to extract new knowledge from data in order to improve economic forecasting models. The book starts with an introduction on the use of data science technologies in economics and finance and is followed by thirteen chapters showing success stories of the application of specific data science methodologies, touching on particular topics related to novel big data sources and technologies for economic analysis (e.g. social

media and news); big data models leveraging on supervised/unsupervised (deep) machine learning; natural language processing to build economic and financial indicators; and forecasting and nowcasting of economic variables through time series analysis. This book is relevant to all stakeholders involved in digital and data-intensive research in economics and finance, helping them to understand the main opportunities and challenges, become familiar with the latest methodological findings, and learn how to use and evaluate the performances of novel tools and frameworks. It primarily targets data scientists and business analysts exploiting data science technologies, and it will also be a useful resource to research students in disciplines and courses related to these topics. Overall, readers will learn modern and effective data science solutions to create tangible innovations for economic and financial applications.

Enhancing Financial Sector Surveillance in Low-Income

Countries - Background Paper Oct 03 2021 This note provides an overview of the literature on the challenges posed by shallow financial systems for macroeconomic policy implementation. Countries with shallow markets are more likely to choose fixed exchange rates, less likely to use indirect measures as instruments of monetary policy, and to implement effective counter-cyclical fiscal policies. But causation appears to work in both directions, as policy stances can themselves affect financial development. Drawing on recent FSAP reports, the note also shows that shallow financial markets tend to increase foreign exchange, liquidity management, and concentration risks, posing risks for financial stability

Anthro-Vision May 18 2020 While today's business world is dominated by technology and data analysis, award-winning financial journalist and anthropology PhD Gillian Tett advocates thinking like an anthropologist to better understand consumer behavior, markets, and organizations to address some of society's most urgent challenges. Amid severe digital disruption, economic upheaval, and political flux, how can we make sense of the world? Leaders today typically look for answers in economic models, Big Data, or artificial intelligence platforms. Gillian Tett points to anthropology—the study of human culture. Anthropologists learn to get inside the minds of other people, helping them not only to understand other cultures but also to appraise their own environment with fresh perspective as an insider-outsider, gaining lateral vision. Today, anthropologists are more likely to study Amazon warehouses than remote Amazon tribes; they have done research into institutions and companies such as General Motors, Nestlé, Intel, and more, shedding light on practical questions such as how internet users really define themselves;

why corporate projects fail; why bank traders miscalculate losses; how companies sell products like pet food and pensions; why pandemic policies succeed (or not). Anthropology makes the familiar seem unfamiliar and vice versa, giving us badly needed three-dimensional perspective in a world where many executives are plagued by tunnel vision, especially in fields like finance and technology. "Fascinating and surprising" (Fareed Zararia, CNN), Anthro-Vision offers a revolutionary new way for understanding the behavior of organizations, individuals, and markets in today's ever-evolving world.

Finance and Growth May 30 2021 This paper describes a feedback effect between real and financial development. The paper presents a new variable, which we call the cost of financial intermediation, through which the feedback between finance and growth operates. The theoretical part of the paper describes how specialization of financial intermediaries leads to such a feedback effect. The main result of this feedback is that differences in productivity across countries are amplified by financial intermediation. The empirical part of the paper uses U.S. cross-state data from banks' income statements to measure the cost of financial intermediation and to provide evidence for the feedback effect between finance and growth.

Advances in Behavioural Finance and Economics Oct 23 2020 For quite a long time, financial decision-making has followed the traditional theory of finance. The traditional theory considers a given subject's aversion to risk as an unchanging variable, and its basic principles include the fact that people choose from possible alternatives to maximize their expected profits. In 1979, Tversky and Kahneman introduced prospect theory, which states that people underweight outcomes that are merely probable in comparison with outcomes that are obtained with certainty. Further, the model considers that people generally discard components that are shared by all prospects under consideration. Subsequently, behavioural finance theory

introduced psychology behaviour science theory into finance in order to use its pioneering view to re-examine investment behaviour in financial markets. Therefore, behavioural finance holds important implications for the practice of financial management and innovation in finance and economics.

Contemporary Issues in Business and Economics Apr 28

2021 This book is a collection of high-impact papers accepted and presented at the 2019 Vietnam's Business and Economics Research Conference (VBER2019) organised by Ho Chi Minh City Open University held on 18th-20th July 2019. The Special Issue is associated with a broad coverage of the contemporary issues in Business and Economics in Vietnam and other emerging markets reflecting a key theme of VBER2019: Vietnam's Place in the Asia Pacific Region. A total of 14 papers were published from more than the 120 submissions to the VBER2019 Conference.

Published papers had been undergone a rigorous reviewing process conducted by the Journal of Risk and Financial Management. The papers incorporated in this book address contemporary issues in business and economics from Vietnam and other emerging markets in the Asian region from various angles such as economics, finance, and statistics to management science. At the time of writing this note, some of the papers have attracted more than 1000 downloads in 3 months. In particular, a paper on "Foreign Direct Investment and Economic Growth from Developing Countries in the Short Run and Long Run" by Trang

Thi-Huyen Dinh and her team has attracted almost 6000 downloads in 3 months. These statistics indicate that the papers published in this Special Issue have attracted the wide interest of readers. Among these 14 published papers, three main areas of important contemporary issues in Business and Economics in the Asian region can be identified. First, a block of papers deals with various important and fundamental issues in the emerging markets the Asian region, from exchange rate regime, financial inclusion, and financial development to energy consumption and environmental degradation. On the issue of CO₂ emissions, energy consumption and economic growth in the ASEAN, Vo, Vo, and Le utilized various time series econometrics approaches. Key findings from this paper indicate that there are no long-run relationships among carbon dioxide (CO₂) emissions, energy consumption, renewable energy, population growth, and economic growth in the Philippines and Thailand, but a relationship does exist in Indonesia, Myanmar, and Malaysia. Loo, in his paper on financial inclusion for the ASEAN, concluded that advancing internet capability and availability present investors an opportunity to offer financial technology or Fintech to meet the need for financial services in this digital era. Second, a challenge in quantitative studies for a single country, such as Vietnam, with limited data is generally noted. However, various empirical studies on Vietnam's business and economics issues have been conducted. Nguyen, Quan, and Pham examined the cultural distance and entry mode of foreign direct investment in Vietnam. A key finding from their paper is that when there is a great cultural difference between Vietnam and their home country, foreign-invested firms prefer wholly owned subsidiaries over equity joint ventures. Within the Vietnamese market, Pham, Vo, Ho, and McAleer conducted a study on the issue of corporate financial distress. The authors conclude that the corporate financial distress prediction model, which includes accounting factors with macroeconomic indicators, performs much better

than alternative models. In addition, the evidence confirms that the global financial crisis (GFC) had a damaging impact on each sector, with the Health & Education sector demonstrating the most impressive recovery post-GFC, and the utilities sector recording a dramatic increase in bankruptcies post-GFC. At another extreme of the spectrum, Van and Nguyen considered that competitive context, social influences, the understanding of managers about corporate social responsibility (CSR), and the internal environment of companies are the four drivers of CSR. The authors also argued that in the four drivers, competitive context has the strongest impact on adopting CSR. Third, last but not least, various papers focus on an important aspect of public finance. For an example, Pham, Pham, and Ly documented the effect of double taxation treaties on the bilateral trade of Vietnam with ASEAN member states, thereby making an extensive comparison with its EU partner countries. Their findings indicate the significant contributions of the tax treaties to Vietnam's trade performance, not exclusively with ASEAN but also with EU partner countries. In addition, regarding public finance for Vietnam, Nguyen, Vo, Ho, and Vo investigated the contribution of fiscal decentralisation to economic growth across provinces in Vietnam. For the first time in Vietnam, the fiscal decentralisation index together its two subcomponents, including fiscal importance and fiscal autonomy, are developed. Findings from this paper indicate that while fiscal importance and an overall level of fiscal decentralisation have provided negative impact on provincial economic growth, fiscal autonomy has a positive impact on economic growth across provinces in Vietnam.

Why are the G-20 Data Gaps Initiative and the SDDS Plus Relevant for Financial Stability Analysis?

Feb 24 2021 In the wake of the recent global crisis the international community is giving an increased focus on stability of the financial system, so-called financial stability analysis. With the increasing need for data sets to undertake this analysis, the question naturally arises as to what types of data are needed? While various data initiatives are underway, two initiatives at the forefront are: (1) the IMF/FSB G-20 Data Gaps Initiative (DGI) created by the international statistical community and endorsed by the G-20 Finance Ministers and Central Bank Governors as well as the IMF's International Monetary and Financial Committee, and (2) the new Special Data Dissemination Standard Plus (SDDS Plus), aimed particularly at economies with systemically important financial sectors. This paper explains the relevance of the DGI for financial stability analysis and the close link with the SDDS Plus. The importance of the SDDS Plus in promoting the dissemination to the public of a core set of data for financial stability analysis is emphasized.
