A Guide to Qualitative Meta-synthesis Oct 26 2020 A Guide to Qualitative Meta-synthesis provides accessible guidelines for conducting all phases of theory-generating meta-synthesis research, including data collection, analysis, and theory generation. It is a research methodology that is designed to generate evidence-based theory by extracting, analyzing, and synthesizing qualitative findings from across published investigations. These theories provide scaffolding that can be used by health-care providers and other professionals to make context-based decisions and implement situation-specific actions. Theory-generating meta-synthesis methods stem from the qualitative research paradigm, especially grounded theory. Systematic and rigorous methods are used to identify topically related research reports that provide qualitative findings for analysis. The subsequent analysis of the data goes beyond merely reorganizing and recategorizing research findings. Newly synthesized concepts are developed, and the dynamic relationships among them are fully articulated. The validity of the resultant theory is ensured based on theoretical, methodological, and researcher triangulation; unbiased data collection and sampling strategies; inductive-deductive data analysis and synthesis strategies; and continuous reflexivity. Meta-synthesis-generated theories are highly important in environments where the use of normalized algorithms, guidelines, and protocols are on the rise. The types of theories discussed in this book will help service providers customize standardized tools so that the most effective evidence-based, yet individualized, interventions can be implemented.

Noise Control Manual Mar 19 2020 Excessive noise levels are generally acknowledged to have adverse effects on our environment. Studies indicate that excessive noise levels can cause fatigue in exposed individuals, lower efficiency and productivity, impaired speech communication, and hearing loss. Excessive noise is almost everywhere today - in the office, in schools, hospitals and other institutional facilities, in all classes of public buildings, and in our factories. INDUSTRIAL NOISE High noise levels in factories can make speech communication in the plant difficult and at times impossible. Foremen are often unable to hear warning shouts from co-workers. The problem of hearing loss due to excessive noise exposure is of particular concern to industry, and to the federal government. In the early 1970s, the United States Congress passed the Occupational Safety and Health Act (OSHA) which sets criteria for health hazards and established limits for noise exposure of industrial workers. The OSHA Noise Standard was amended in 1982 to require audiometric testing of all employees exposed to noise levels of 85 dB or above for eight hours. A NOISE IN COMMERCIAL AND INSTITUTIONAL BUILDINGS While noise levels in offices, stores, schools, and other commercial and institutional buildings seldom reach those encountered in many industrial environments, they often reach levels which are distracting to the occupants of such buildings. Impairment of speech communication among workers, or inversely the lack of speech privacy, are both deterrents to efficiency and productivity and are detrimental to the occupants' comfort and sense of well-being.

Public Lands Conflict and Resolution Sep 05 2021 The United States Forest Service, perhaps more than any other federal agency, has made great strides during the past two decades revolution izing its public involvement efforts and reshaping its profile through the hiring of professionals in many disciplinary areas long absent in the agency. In fact, to a large extent, the agency has been doing precisely what everyone has been clamoring for it to do: involving the public more in its decisions; hiring more wildlife biologists, recreation specialists, sociologists, planners, and individuals with "people skills"; and, fur thermore, taking a more comprehensive and long-term view in planning the future of the national forests. The result has been significant-in some ways, monumental-changes in the agency and its land manage ment practices. There are provisions for public input in almost all as pects of national forest management today. The profeSSional disciplines represented throughout the agency's ranks are markedly more diverse than they have ever been. Moreover, no stone is left untumed in the agency's current forest-planning effort, undoubtedly the most compre hensive, interdisciplinary planning effort ever undertaken by a resource agency in the United States. Regardless of the dramatic change that has occurred in the U. S. Forest Service since the early 1970s, the agency is still plagued by con flicts arising from dissatisfaction ~th how it is doing business.
