We need to know whether each and every food we consider purchasing and eating is alkaline or not, and the degree to which it is alkaline. "There is science and there is religion and never the twain shall meet." Is that to be the fate of these two disciplines? Having one foot in the religious world and the other in the scientific can be as precarious as attempting to remain astride two logs in a river. In this sequel to *A User's Guide to Our Present World: What Everyone Should Know about Religion and Science*, complexions of what religion and science look like today are investigated. It discusses topics from Jesus and family values, evangelists who arrive at your door, discrimination and racism, and the dark side for religion, to delicate balances impacting us and the world, climate change, the pandemic, and how ancient structures like Stonehenge and the pyramids could have been built for science. The study then turns to theological implications of scientific theories, including relativity and quantum. Sure to ruffle the feathers of some from both sides, the examination focuses on how scientific paradigms fail to cohere with traditional theological doctrines and presents the potentially uncomfortable view that scientific revolutions might warrant a corresponding revolution for theology itself. Helping education students become savvy qualitative researchers *Qualitative Research in Education: A User's Guide, Third Edition* continues to bring together the essential elements of qualitative research, including traditions and influences in the field and practical, step-by-step coverage of each stage of the research process. Synthesizing the best thinking on conducting qualitative research in education, author Marilyn Lichtman uses a conversational writing style that draws readers into the excitement of the

research process. Real-world examples provide both practical and theoretical information, helping readers understand abstract ideas and apply them to their own research. Jesus spent decades in India. - Ethiopians, not Jews, are the real chosen people. - A religion in Iran predicted the Virgin Birth, hundreds of years before Christ. - Abraham was an Iraqi. - Lenin was a Saint. - Worms have souls. - There’s no such thing as the Holy Trinity. - All religions are the same. These are not conspiracy theories - but the genuine beliefs of the some of the world’s major religions. In *God: A Users’ Guide*, broadcaster Sean Moncrieff takes us through the history and development of the twenty largest religions in the world - in the process demonstrating that the truth is far more compelling than the fictional accounts. In the name of religion, millions have been killed, and millions have been saved.

Political dynasties have been built on the back of religious belief, or been destroyed because of them. The history of religion is one of tyranny, betrayal, sacrifice, generosity and faith: where the same 'facts' have often brought believers to dramatically different conclusions. From religions which have a multiplicity of Gods, to religions which have no God at all, *God: A Users' Guide* demonstrates how the vast majority of the world's religions did not develop in isolation, but were influenced by already existing belief systems. We have far more in common than you might think. Intended to support the national initiative to strengthen
